1. My11Circle Case Study Challenge by PM School

Download and install My11Circle keeping in mind the target audience. You have been on-boarded as the VP, Product of My11Circle. On the first day, you get a mail from the CEO -

Hi Team,

A concern which real money fantasy sports products face is dependency on Cricket and its seasonality. Trend shows that users come to the platform only during big events like IPL, World Cup, etc. Another concern which fantasy sports products face is low ARPU and long break-even period compared to other real money games like Rummy, Poker, etc..

We need to improve retention at any cost. How do we solve this?

Problem Statement :

You've been entrusted with the task of increasing the retention on My11Circle, i.e., increasing the repeat behaviour of playing for real cash of a user. Suggest 4 new solutions which will drive it.

Please ensure that you:
- Provide UI mocks/flow charts and explain each feature in detail (Feel free to use any wireframing tool)
- Describe how these solutions facilitate the goal of increasing the retention
- Identify metrics that would help you measure whether a feature is achieving its goal or not

Follow us on LinkedIn

Solution by

Jaideep Kalsi, Gayathri Yuvraj and Sarthak Navalakha

Product

My11Circle is an interactive and exciting platform that brings fantasy sports to a full circle at the comfort of doing it from device. Users don a selector's hat and create a playing team – a set of players that will keep the scorers busy and spectators on the edge of their seats.

Objective

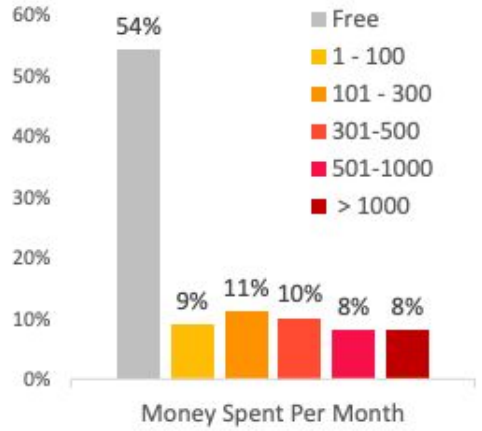

Increase the repeat behavior of playing for real cash of a user

Key User Insights

Playing frequency is consistent across the age groups 18-24 and 25-36, while it is comparatively higher for age group 37-50

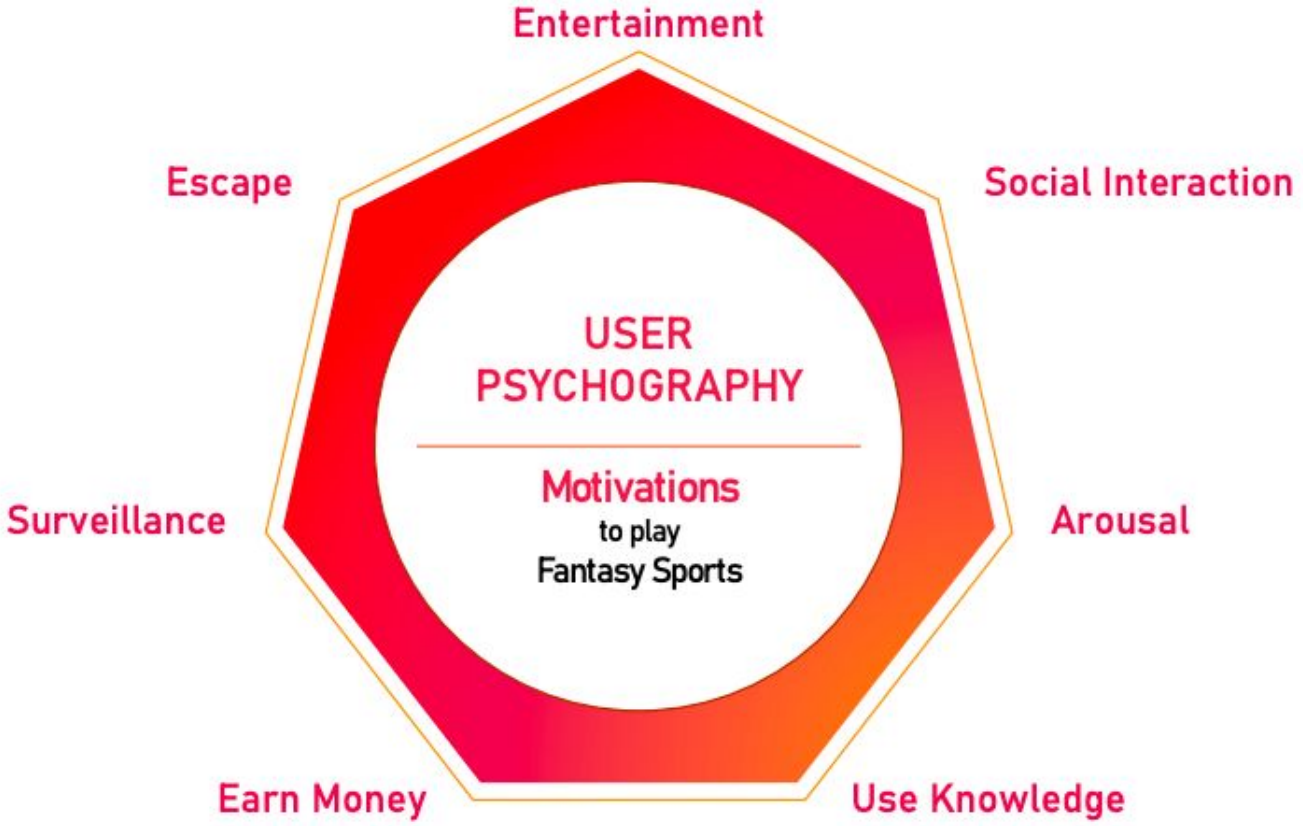

Playing frequency was found higher with lower income groups, suggesting it may be considered as supplementary or incremental income source, leading to higher engagement

Users in smaller cities are found to be played more frequently that ones in large cities

Cricket is the most popular sport among fantasy sports users

FEELINGS FOR FANTASY SPORTS

Fantasy sports is a very real time experience w.r.t. the real sports.

The fact that you can win money is a thrilling experience.

Fantasy sports also helps me connect with my friends.

There's nothing like the feeling of winning, especially when you don't have to work hard to get it.

Your luck determines the all-important bragging rights over your friends.

Crafting a good team takes legitimate skill, no matter whether it's cricket or football and a good team is very rewarding.

It is a great distraction from the daily routine, and the cost is well worth it.

Paying money for services enriches the fantasy experience.

Winning is fun

I believe that most people play fantasy sports because if they win, then it shows that they know more about sports than everyone else.

Keeping up with several people around me who play fantasy sport is very important

Fantasy sports are harmless fun, nothing could possibly intrude real life

Watches the sport with colleagues and loves trash talking.

Sometimes I get busy. This ensures that I keep track of the sports, which I love.

The games were based on numbers, perhaps even forming an equation for success.

Follow us on LinkedIn

MY-PORTFOLIO FANTASY STOCK EXCHANGE

About the Feature

Just as people have investment portfolios, this feature brings the same concept to Fantasy Sports! The user can collect Fantasy Stocks of several players at the quoted price and build a portfolio of several stocks by buying and selling these stocks.

Why My-Portfolio?

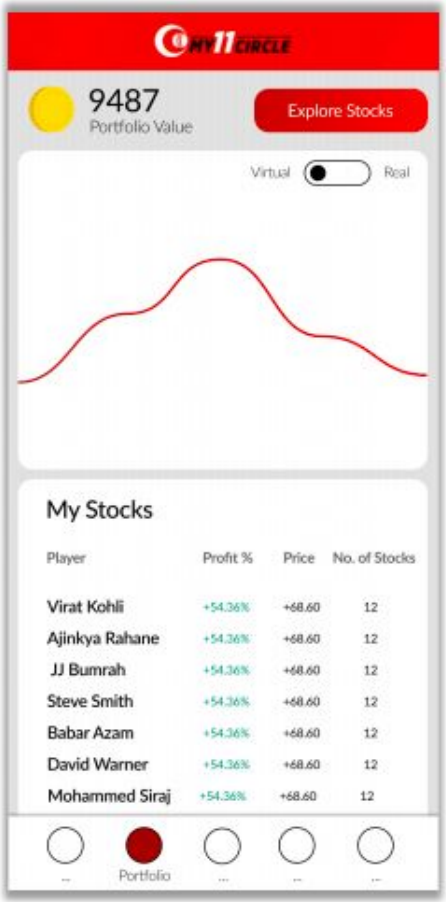

- Maintaining portfolio creates a long-term engaging experience
- Users can get involved even with knowledge of select players
- Gives an opportunity to users to showcase their success
- Develops another source of stream for income for users
- Users don't have to go through the hassle of creating a team every time

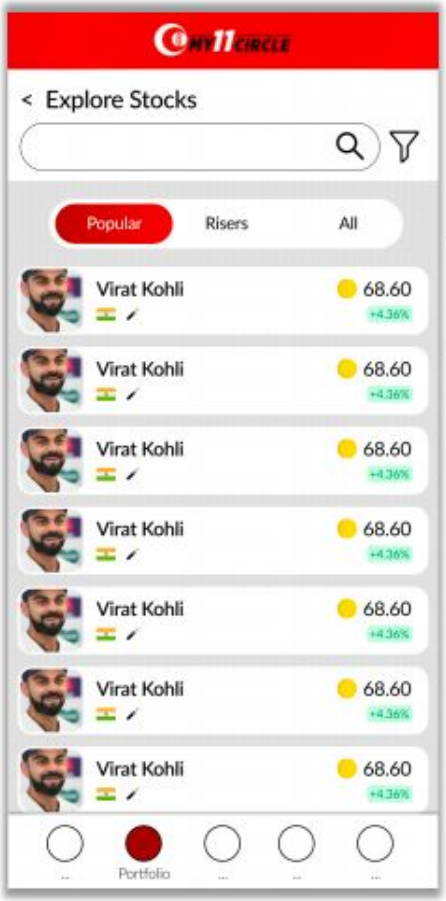

Impact on Increasing ARPU

Stock purchases creates a new source of revenue. Small commission percentage for transaction of stocks will be charged to the users. For maintaining a successful portfolio, users will have to perform several transactions regularly, creating a constant revenue generation.

Impact on Increasing Retention

A portfolio gives a reason for users to come back on the platform to see how their stocks are performing. Provides flexibility for users to engage with both short-term and long-term strategies. It does not depend on seasonality of fixtures.

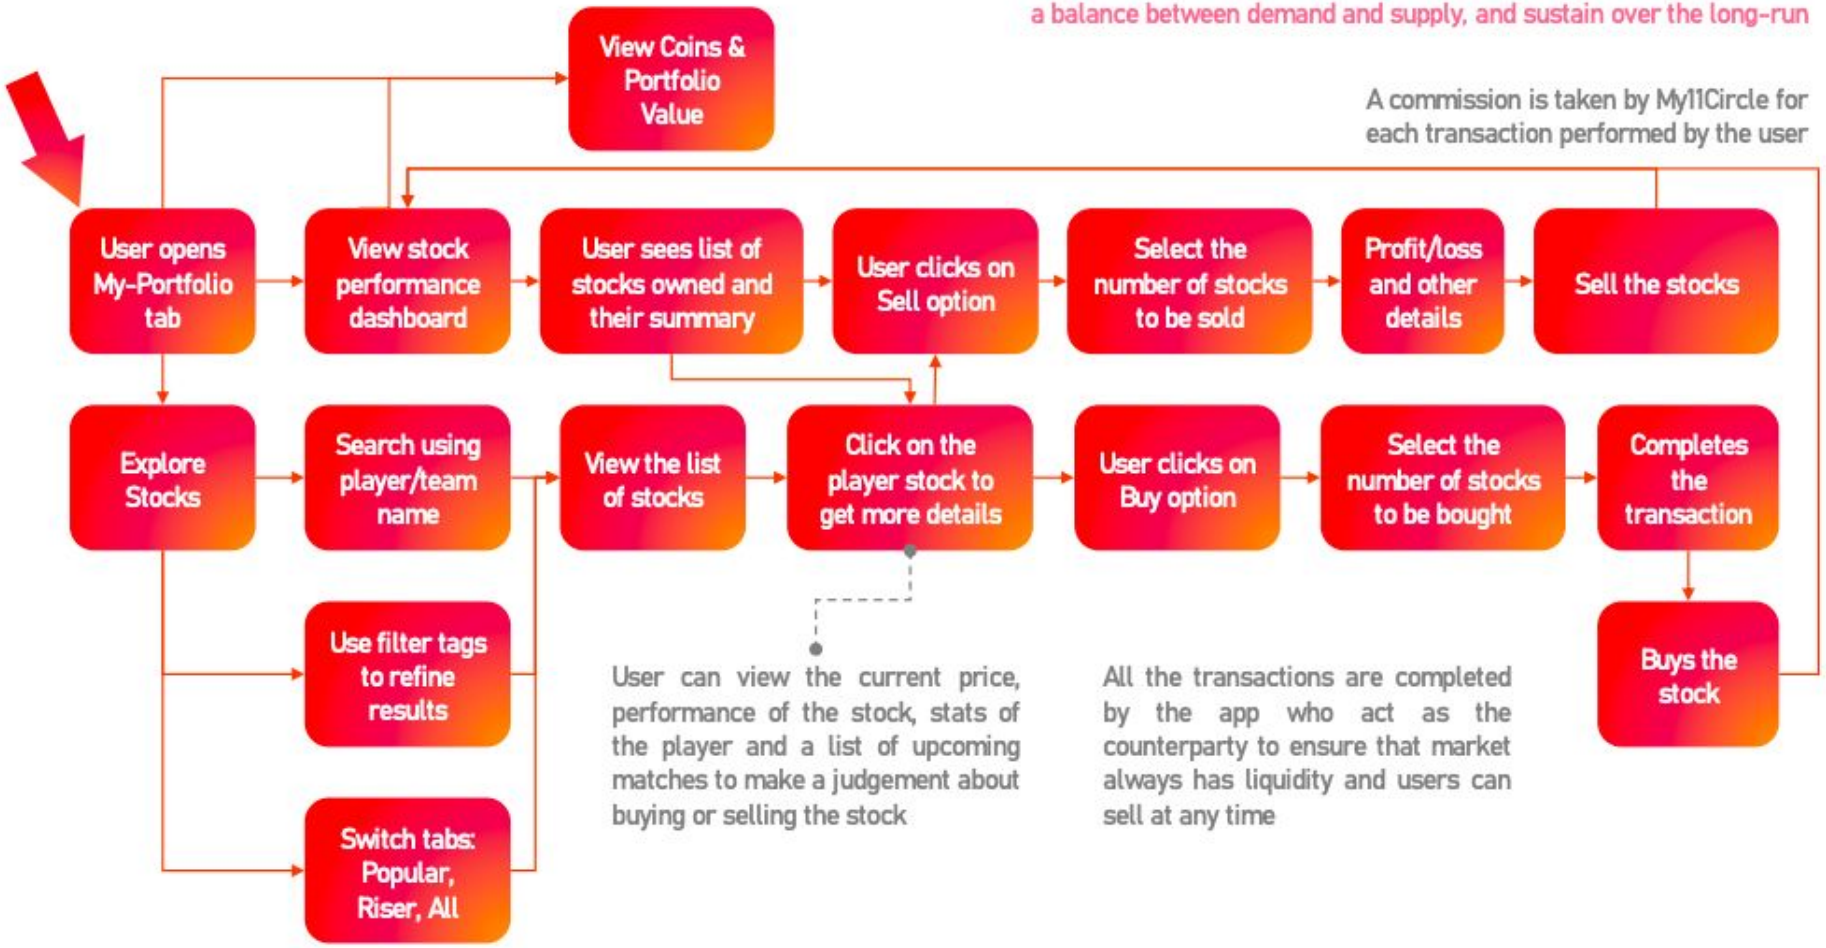

Follow us on LinkedIn

USER FLOW

This feature requires design of a prediction algorithm that works in real-time to simulate the financial model of the stock market, maintain a balance between demand and supply, and sustain over the long-run

A commission is taken by My11Circle for each transaction performed by the user

Follow us on LinkedIn

MY-PRO

About the Feature

My-Pro is a subscription feature, designed to create a consistent stream of revenue for My11Circle by giving added benefits to lover of the sport and fantasy league.

+ Free entry for a fixed number of games each month, within an entry fee limit
+ View team selection of winning user for each contest
+ Access to expert analysis, interesting facts and stats
+ Daily quizzes that gives chance to win rewards
+ Access to exclusive contests having exclusive rewards

Why My-Pro?

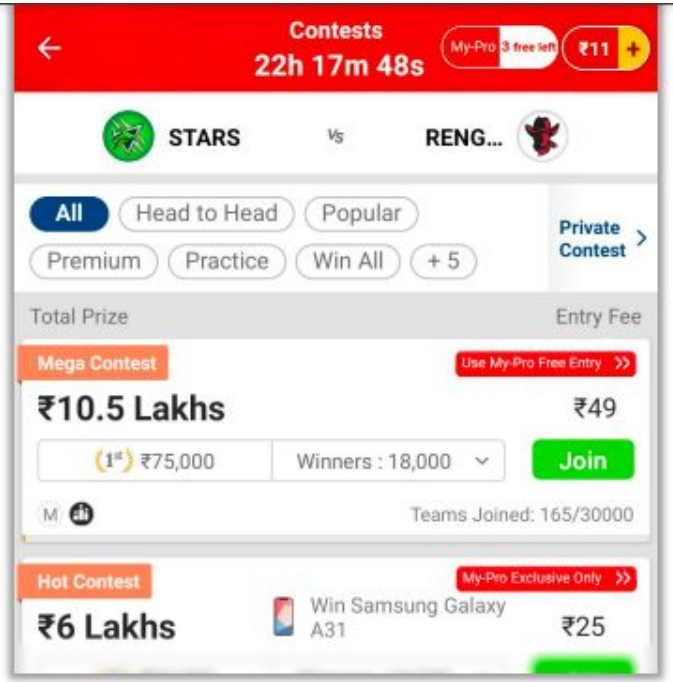

- Gives the insights about the sport for knowledge seekers
- Equips the users with knowledge to perform better in fantasy games
- Opportunity to use factual knowledge to win rewards
- Gives user a feeling of exclusivity

Impact on Increasing ARPU

Generates a constant stream of revenue. Revenue is generated irrespective of subscriber's activity. Increases loyalty and new users, who want to increase their knowledge about the game.

Impact on Increasing Retention

Very high probability that user will play at least the allocated free entries each month. Gives multiple incentive for users to keep coming back to the app.

	1 – month	6 – months	12 – months
Price	₹199	₹1099	₹2099
Free Entries	4 per month	4 per month	4 per month
Entry Fee Limit	₹49	₹49	₹49
Quiz Access	Yes	Yes	Yes
Exclusive Contests	No	Yes	Yes
Expert Corner	No	Yes	Yes
View Winning Team	No	No	Yes

The Problem

" People in India still invest via agents despite availability of many online platforms enabling direct investments "

Assumption & Sources

- People investing in direct mode is approximated to be using online methods; and people investing otherwise is approximated to invest offline, via agents
- http://www.citigroup.com/emeaemailresources/gra30616_2019_IndiaCountryUpdate_v9.pdf
- https://rb.gy/pzedxn
- https://rb.gy/vhioes

Why does this problem exist?

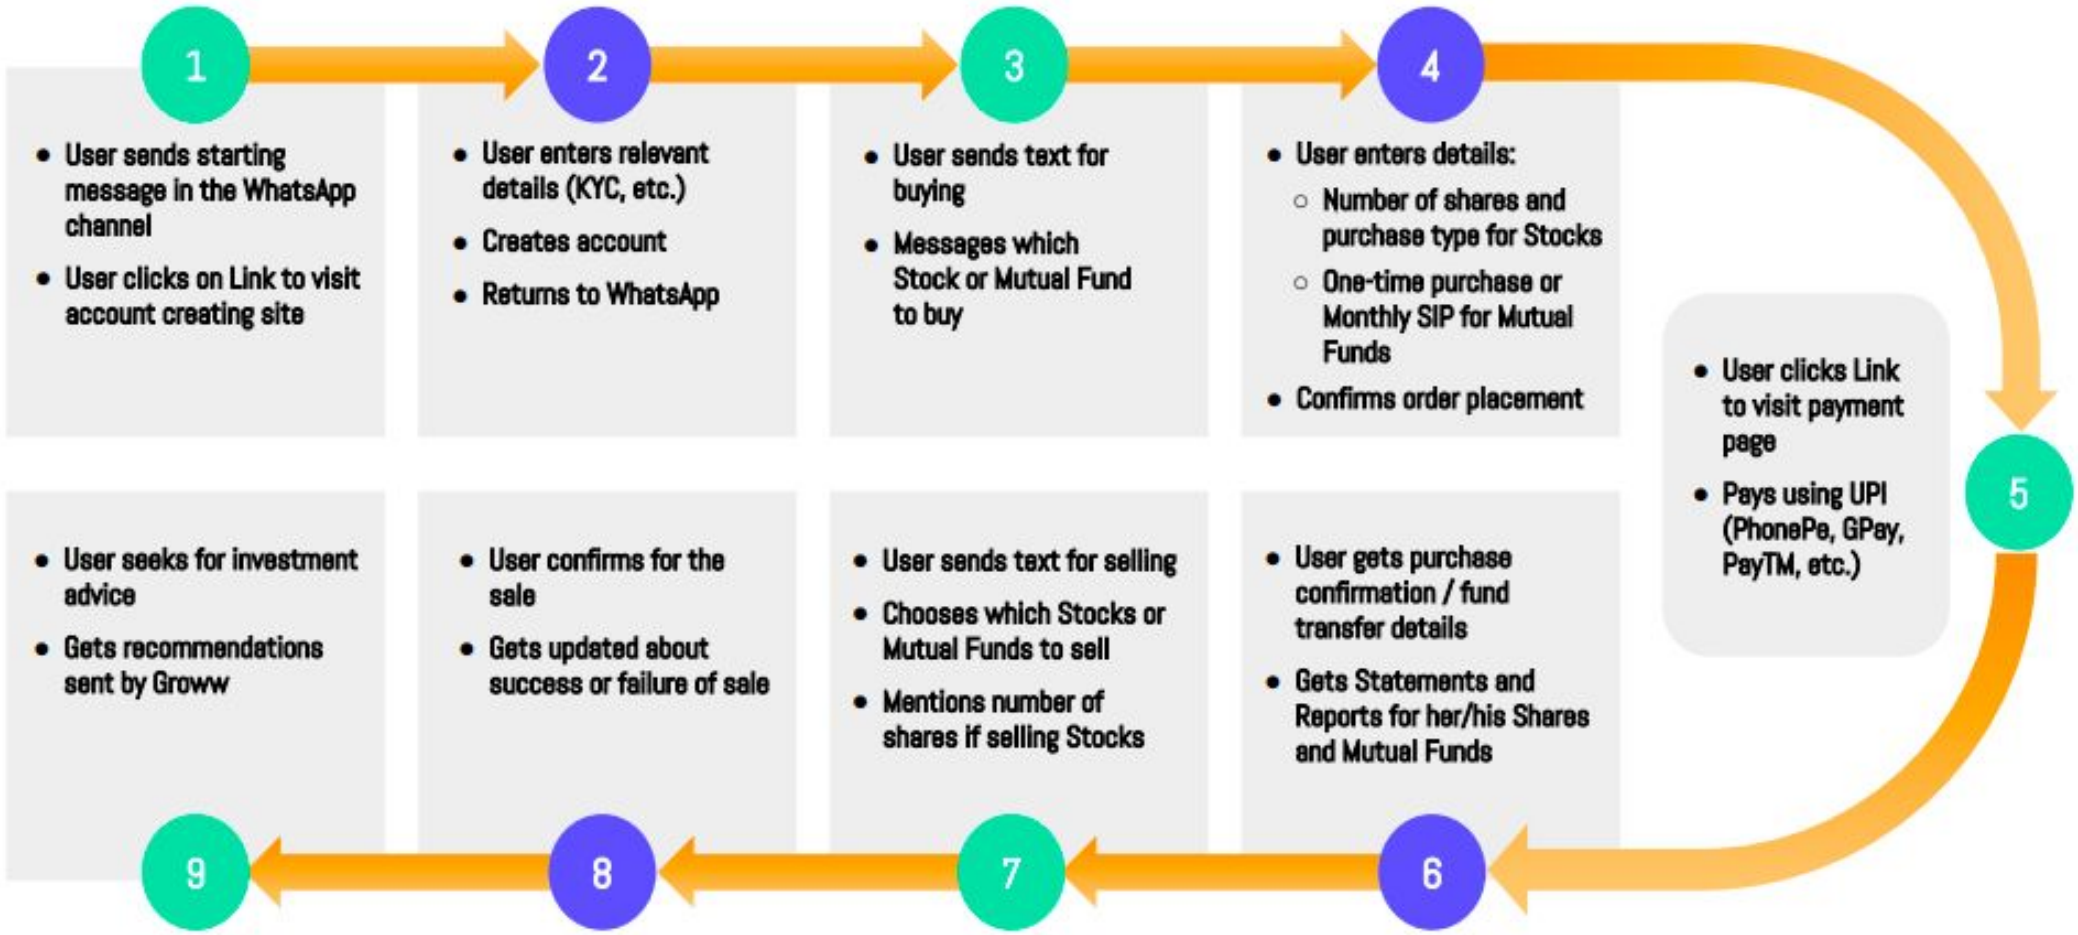

1. Learning a new platform is cumbersome
2. People don't trust the platforms before use
3. Confusion because of many existing platforms
4. People seek investment advice from the agents
5. Account creation process is deemed tedious

How does the product solve the problem?

1. WhatsApp is an already known platform
2. Trust in Groww will suffice. WhatsApp is trusted
3. No more confusion of choice
4. Investment advice from the channel
5. Account creation in Groww is already simple

GTM Plan & Success Metrics

The Go-to-Market strategy

Launch MVP with features related to **Mutual Funds**

Market MVP to a part of target segment which includes people interested in **Mutual Funds**

Based on user feedback, **launch V1** adding features related to **Stocks**

Market V1 to the full target segment

Monitor success metrics & **iterate**

For a user active for more than a month, **suggest Groww App** for more features.

How to measure the success of the Product?

User value

Awareness
- Number of people sending starting message on the channel per month

Conversion
- Number of accounts opened per month

Activity
- Number of Mutual Fund investments done per month
- Average number of Stock Market transactions per user per week

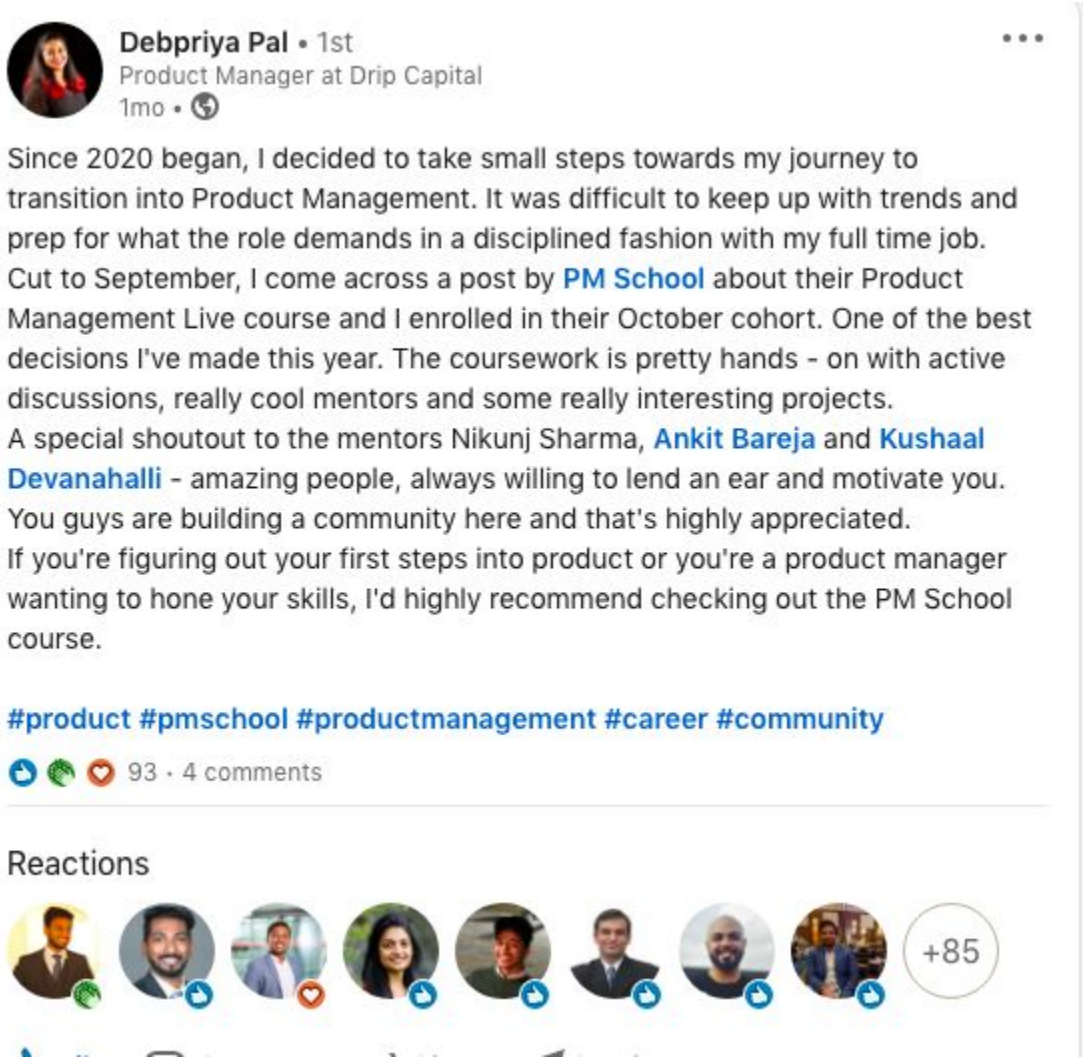

Retention
- Monthly active Mutual Fund investors
- Weekly active Stock Market investors

Business value

- Volume of Mutual Fund investments per month in INR
- Volume of Stock Market transactions per week in INR

PM School Success Stories!

Debpriya Pal • 1st
Product Manager at Drip Capital
1mo •

Since 2020 began, I decided to take small steps towards my journey to transition into Product Management. It was difficult to keep up with trends and prep for what the role demands in a disciplined fashion with my full time job.
Cut to September, I come across a post by **PM School** about their Product Management Live course and I enrolled in their October cohort. One of the best decisions I've made this year. The coursework is pretty hands - on with active discussions, really cool mentors and some really interesting projects.
A special shoutout to the mentors Nikunj Sharma, **Ankit Bareja** and **Kushaal Devanahalli** - amazing people, always willing to lend an ear and motivate you. You guys are building a community here and that's highly appreciated.
If you're figuring out your first steps into product or you're a product manager wanting to hone your skills, I'd highly recommend checking out the PM School course.

3. Uber Case Study Challenge by PM School

You have recently joined as the VP of Products at Uber.

In the upcoming quarter, in the wake of Covid, Uber plans to launch either of the two initiatives - Intercity Logistics OR Intercity Bus Service. You've been entrusted with the task of creating a business case for both the categories and launching the MVP of either of them, based on prioritisation. Create a case, backed by data on which service to go live with first and the launch plan for the MVP of that service. Please ensure that you:

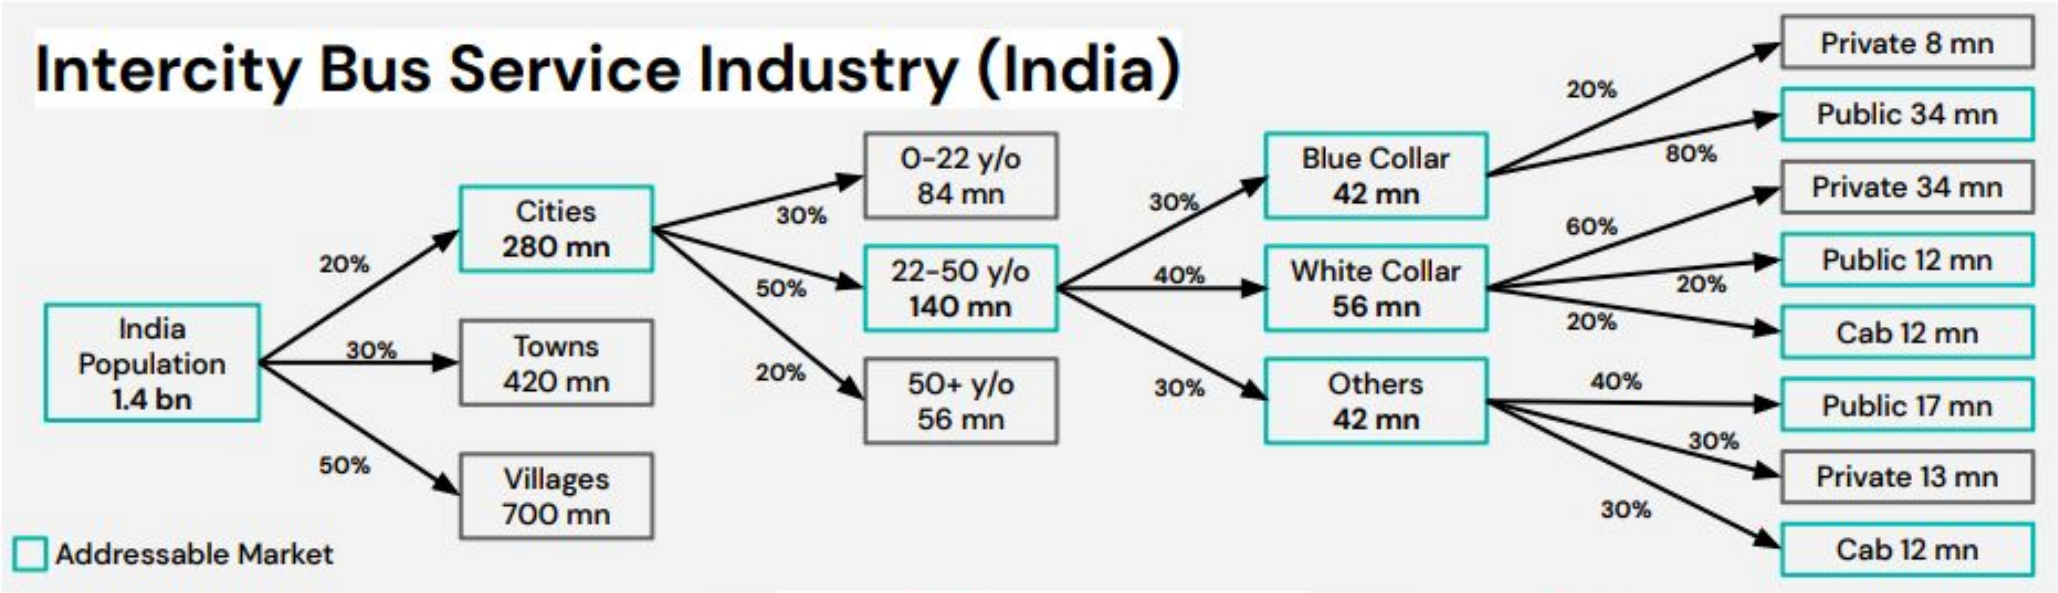

- Find out the market size for both Logistics and Bus Service and prioritise which one to launch first
- Provide mocks/wireframes for the MVP
    - Balsamiq/Figma wireframes preferred
- What will be your Go-To-Market Strategy for the MVP?
    - Things to keep in mind
        - How will you acquire the early adopters?
        - Which country/city/state will you launch first with?
        - Will you go live on the present Uber app or a separate app?
- Identify metrics that would help you measure whether your MVP is achieving its goal or not
- Write a small press release (blog post) announcing the feature

Follow us on LinkedIn

Solution by

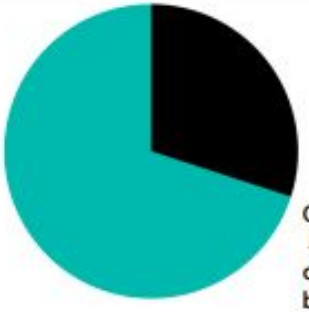

Ishika Mittal and Vaishnavi Tiwari

Intercity Bus Service Industry (India)

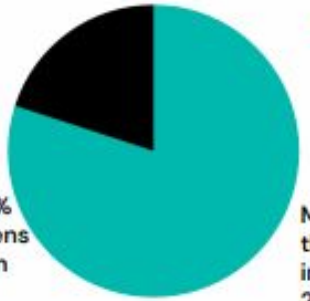

Total Target users= 0.8*(34 + 12 + 12 + 17 + 12) mn
= ~70 mn (Assuming internet penetration ~80%)
Average #rides/ month =5*(70) mn
= 350 mn (taking seasonal nature of intercity trips into account and COVID restrictions)
Average price/trip = $4

Market Size = $ (350*12*4) mn = ~$17 bn

Online penetration is ~30% as most of the sale happens offline via travel agents on bus terminals.

Myt(Redbus) controls ~80% of the online market in the industry (estimated at $1 Bn in 2020) and has grown at 40% CAGR in the 5 years.

Cost Margin (5-15)% depending on fleet size. Cost incurred increased by 54% during COVID.[1]

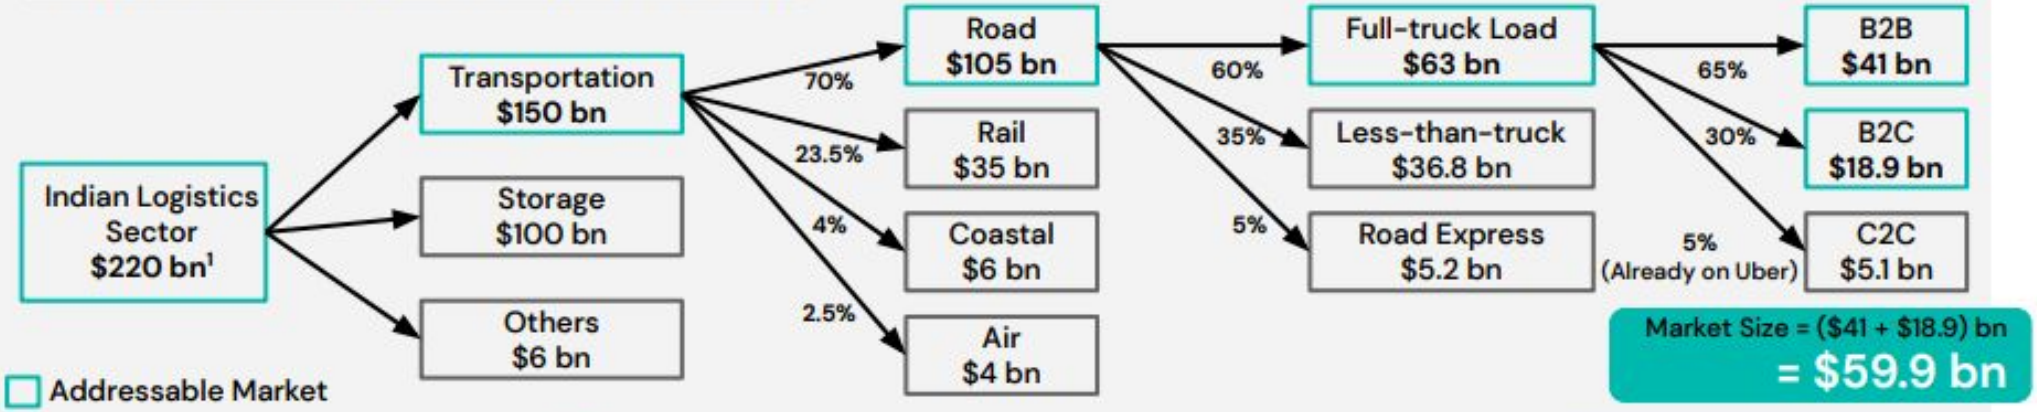

Customer 60% reduction in ridership. Out of running buses, 67% are operational for essential services.[1]

Competitor Online penetration is ~30%, with Makemytrip(Myt) & subsidiaries (Redbus, Ibibo, etc.) owning 80%.[1]

Source: 1-UTIP

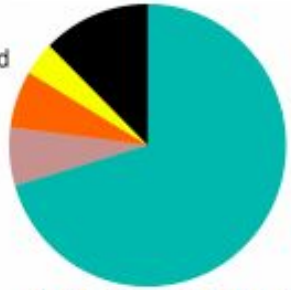

Follow us on LinkedIn

Logistics Industry (India)

85% of Indian Logistics Industry- unorganised and fragmented with ~25% inefficiency losses.[1]

The 15% organised market has multiple competitors with a Government Agency (CCI) leading.[2]

Source: 1-Mckinsey, 2-Statistia

Key Metrics	Intercity Bus	Intercity Logistics (Priority)
Reach	Low reach due to price & safety (COVID) sensitivity of users & high competition from government buses.	High reach due to demand for efficient & fast logistics by both carriers and shippers, due to COVID.
Impact	Low impact due to existing subsidized services.	High impact due to High demand & inefficiencies of alternatives.
Cost	High acquisition & retention cost	Low acquisition & retention cost
Effort	Low technical efforts, high business efforts	High technical efforts, intermediate business efforts

Customer 85% Unorganised Logistics Sector, 22% deficit of drivers. 5.32% growth due to high-demand in COVID.[1]

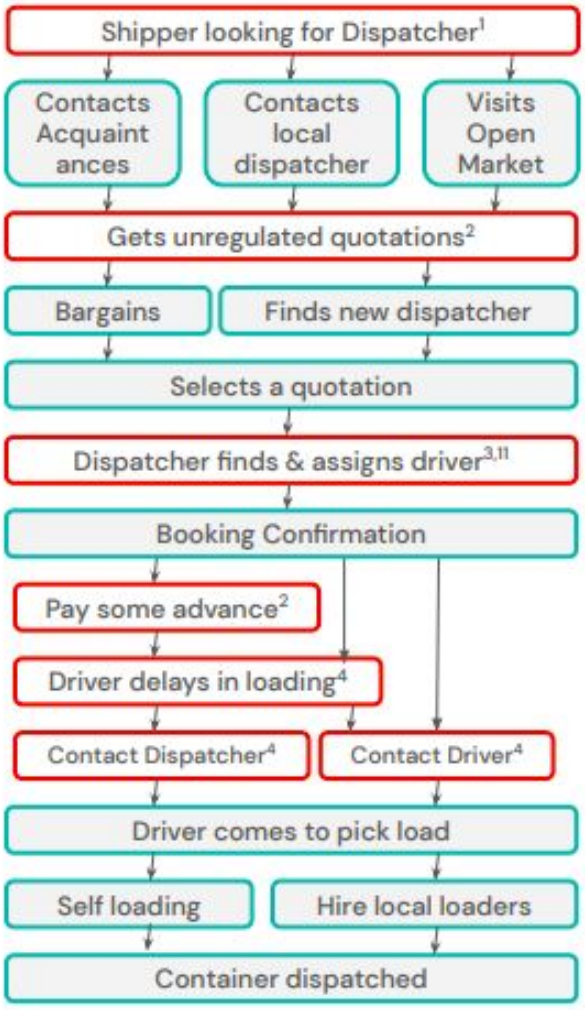

Cost Total Cost Reduction Potential ~7%, 10% CAGR in the next five years.[1]

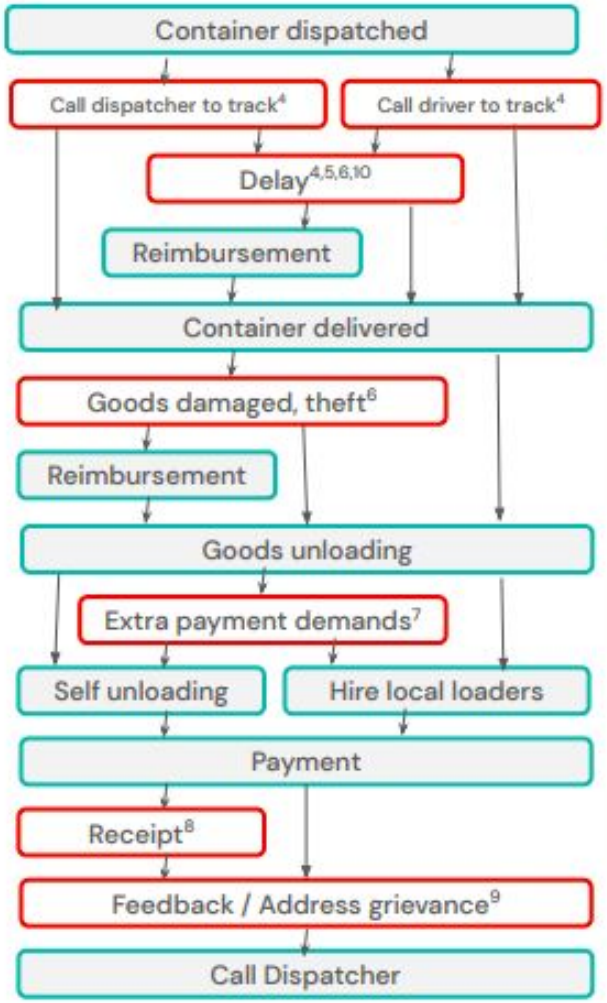

Competitor Unorganized Market (~85%) preferred due to tax evasion, no regulations, etc.

Follow us on LinkedIn

Unorganised Logistics Sector

Understanding the need for a solutionS

-India's ministry of road, transport and shipping estimates suggest **22% shortage** in the number of commercial drivers. During COVID, Logistics registered **5.32% growth**

-**Low skilled drivers** coupled with **low road quality, unoptimized routes,** cause more delays and more damages—the root cause of the **high indirect costs.**[1]

-**Hidden costs** (inventory carrying costs, theft, delays, damages, losses in transit)- **40% of India's logistics costs**(~$300 bn).

Source: Mckinsey, ET Times, Deloitte

Pain Points

1. No platform to find and compare dispatchers.
2. No regulations in prices, suffers from malpractices.
3. No platform to find and hire drivers.
4. No tracking method to check shipment status, ETA.
5. No guarantees to timed deliveries, leading to extra operational costs, especially in B2B and poor customer experience, especially in B2C.
6. Damage & loss of goods without reimbursement.
7. Sometimes, drivers and dispatchers unfairly demand for extra payment after delivery.
8. Payment receipts rarely provided. No method to track payment status, expenses of shipments.
9. Lack of efficient method to manage fleet.
10. Lack of safety regulations during COVID.
11. Unskilled, unprofessional, sometimes fraud drivers

Pain Points

Follow us on LinkedIn

Associated User Persona

Understanding the Customer Segment

Ashok Singhal, CEO Jipkart — Owner Operator

- Jipkart is a organic products firm with PAN-India offline stores.
- Ashok's clients are demanding online delivery due to COVID restrictions.
- Wants a cost-efficient, on-demand, safe, delivery option to meet ends.

Pushkar Singh, Driver — Company Driver

- Pushkar is a truck driver and drives a leased truck from Delhimerry.
- Pushkar is struggling to find gigs due to COVID and movement restrictions.
- Wants a platform to find driving gigs or carrier gigs, while ensuring safety.

Akshat Bansal, Owner of a fleet of trucks — Dispatcher

- Private owner with a fleet of 25 trucks in Gurgaon, a side-business.
- Facing difficulty in monitoring shipment & drivers due to higher demand.
- Wants a platform to list trucks, which allocates drivers & ensures safety.

Venkataraman RM, CEO Nimbooz beverages — Shipper

- Nimbooz is a beverage company with PAN India presence.
- Can't invest in fleet due to financial constraints, and faced late delivery, spoilage and theft issues in unorganized open sector.
- Wants safe and timely delivery of shipment to his B2B & B2C customers.

Proposed User Journey

From shipment quote to delivery

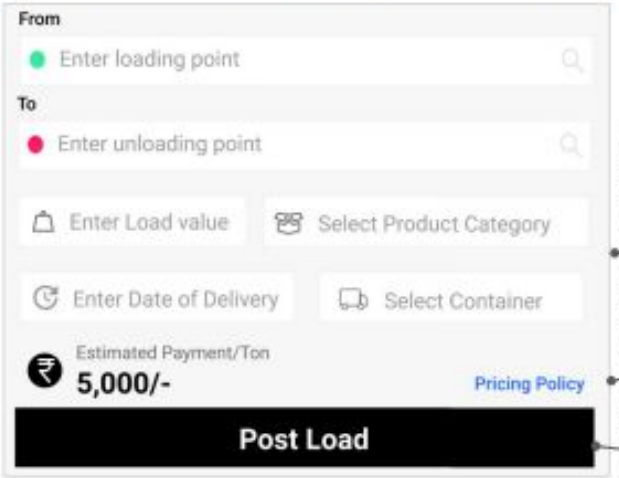

1. Shipper fills the shipment details & does payment
2. Dispatcher/Operator's shipment quotes get updated
3. Dispatcher browses & books the shipment
4. Shipment quote & operator details sent to driver
5. Driver's shipment quotes get updated
6. Driver selects a shipment quote & gets associated details
7. Driver reports to the location of Dispatcher/Operator & picks the trailer maintaining all COVID regulations
8. Driver moves to Shipper's location, loads the goods and delivers and marks it completed
9. Driver keeps the trailer back; Dispatcher/Operator and Shipper gets the notification about delivery completion
10. Shipper confirms the successful delivery. In case of inconsistency, he files a report(compensation seeked if issues isn't resolvable) within 2 hours.
11. Shipper & Dispatcher/Operator give feedback
12. Dispatcher/Operator & Driver receive payment within 2 hrs

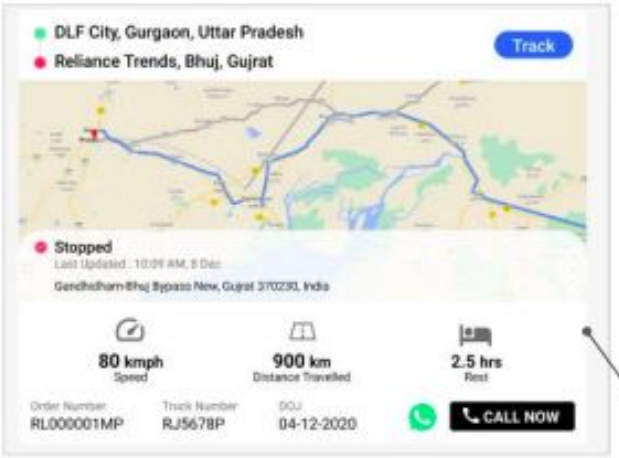

*Vernacular language support is provided to both drivers, dispatchers/operators

Go-To-Market Strategy

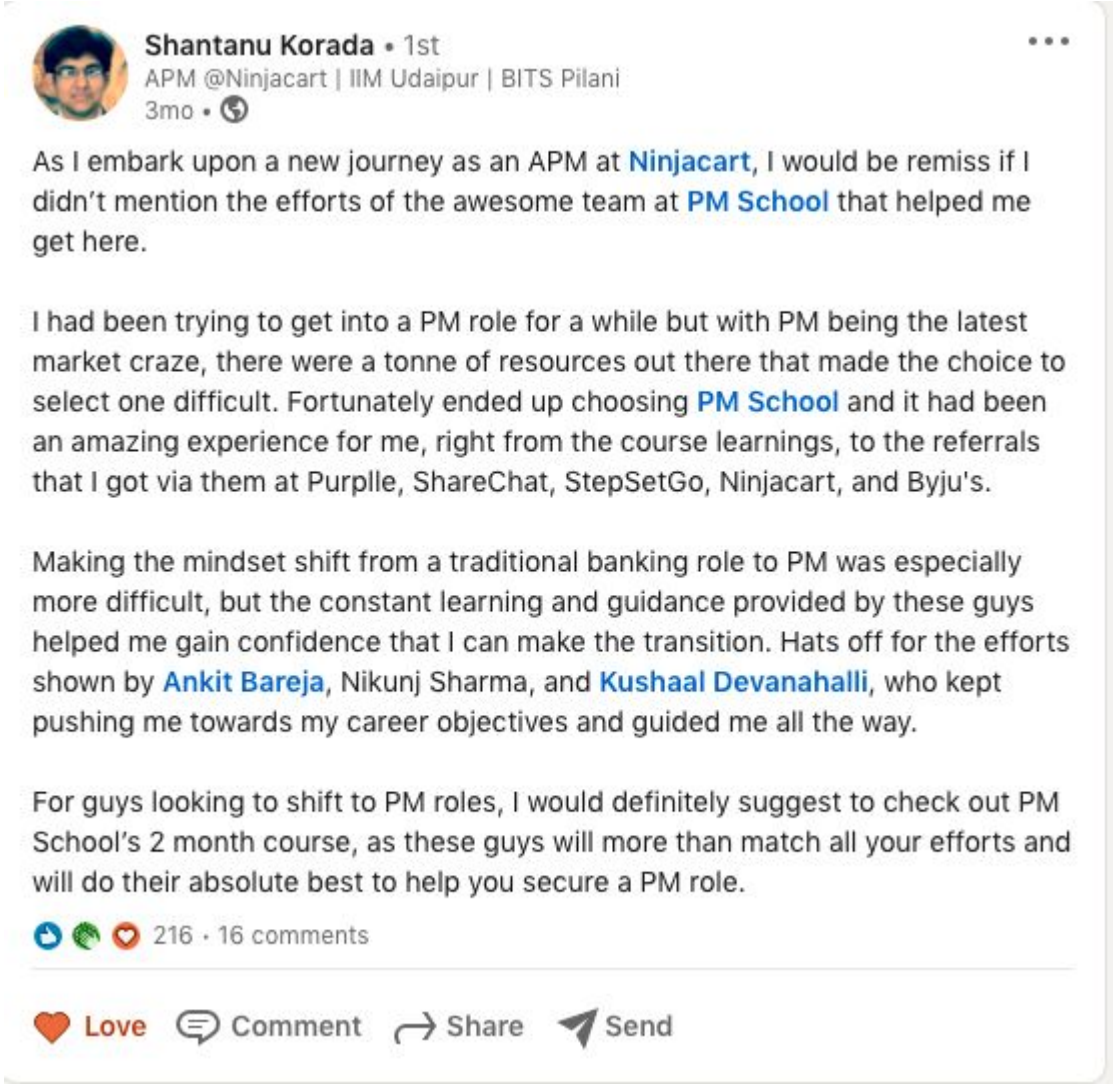

Onboarding Shippers, Operators & Drivers to launch the logistics service

Location: India (Tier 1 & 2 cities which are Uber ride's market.
App: Uber Ride -> Profile for Shippers; Uber Fleets -> Separate profiles for Operators & Drivers

Stakeholder/Time	Pre-launch (Supply-focused)	During launch (Demand)	Post-launch (Expansion)
Dispatcher	-**Acquisition** of **dispatchers/ operators** through tie-ups with local players and ads on FB, newspapers. -**Incentivisation** like 30 days free insurance on onboarding.	---	- **More visible listing** to power users to ensure loyal base. - **Cross-selling, subsidized partnerships** with Insurance agencies, private highway builders, Vehicle servicing companies.
Driver	-**Acquisition** of **drivers** through ads on FB, regional newspapers, toll tax slips, billboards on highways, truck's body, posters on highway dhabas. -**Incentivisation** through high income share (charging **less commission**).	---	- **Refer & Earn** program. - Free **merchandise (T-shirts)** for **promotion**. - Targeted campaigns & Discount coupons to **drivers without leased / owned trucks**.
Shipper	---	- **Incentivisation** like **early bird programs** on first 3 shippings. - Free **service coupons**. - **Bite-sized, story format- Advertisements** on Social Media, Google Search, in-app, Youtube. Stories of middle class, COVID struggles, targeted on 25-45 y/o users.	-Onboarding of shippers(**User Persona 1**) who own their fleet for serving part-time on our app through tie-ups. - Targeted campaigns on **MSME and SME with PAN-India presence.**

PM School Success Stories!

Shantanu Korada • 1st
APM @Ninjacart | IIM Udaipur | BITS Pilani
3mo •

As I embark upon a new journey as an APM at **Ninjacart**, I would be remiss if I didn't mention the efforts of the awesome team at **PM School** that helped me get here.

I had been trying to get into a PM role for a while but with PM being the latest market craze, there were a tonne of resources out there that made the choice to select one difficult. Fortunately ended up choosing **PM School** and it had been an amazing experience for me, right from the course learnings, to the referrals that I got via them at Purplle, ShareChat, StepSetGo, Ninjacart, and Byju's.

Making the mindset shift from a traditional banking role to PM was especially more difficult, but the constant learning and guidance provided by these guys helped me gain confidence that I can make the transition. Hats off for the efforts shown by **Ankit Bareja**, Nikunj Sharma, and **Kushaal Devanahalli**, who kept pushing me towards my career objectives and guided me all the way.

For guys looking to shift to PM roles, I would definitely suggest to check out PM School's 2 month course, as these guys will more than match all your efforts and will do their absolute best to help you secure a PM role.

Problem with StepSetGo:

Mission of StepSetGo(SSG): The app aims to get people out of the workout rut and motivates them by incentivizing them against the number of steps walked.

Existing Problem: Such platforms ask for constant motivation and interest towards staying fit for their usage to the maximum extent. The app lacks features asking for regular user interaction and hence doesn't hook them towards staying motivated for fitness. Because of this, it can easily end up becoming just another app on the user's device.

In-app validation: Coins can be easily earned if the user opens the app once at the end of the day, irrespective of at what time of the day did he/she walk. Apart from this, there is only the 'Show Rewards' option for regular usage which isn't directly visible till considerable exploration.

Coin calculation mechanism and motivation dependence:

Motivation Level ∝ Steps Walked ∝ Coins Earned

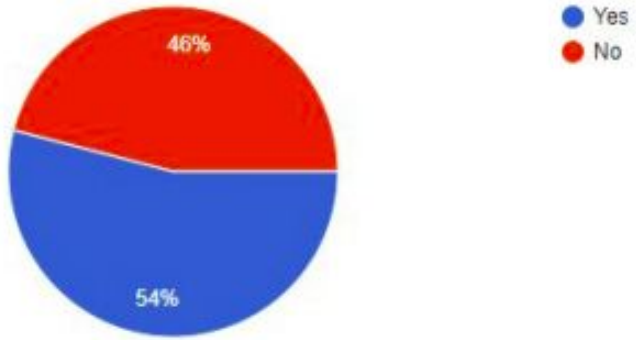

v.nnd.2015.06

Follow us on LinkedIn

User Validation:

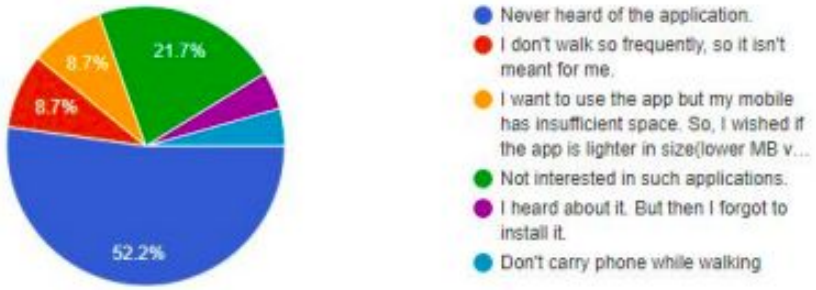

At any point in time, have you used the StepSetGo App?

50 responses

Is there any reason why you don't use the app?

23 responses

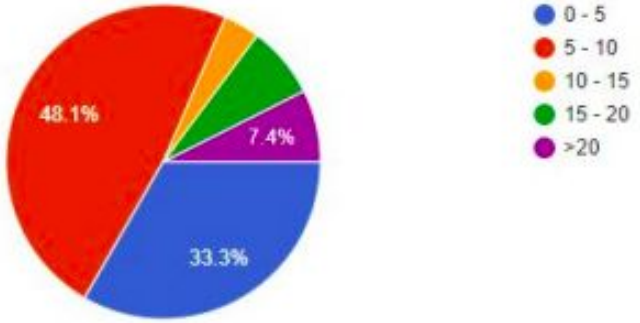

Almost 50% of people not using the platform have never heard of it.

v.nnd.2015.06

At an average, how many times in a week do you open the app?

27 responses

Almost 80% of users open the app less than 10 times a week.

How do you reach the "Show Rewards" button on end of Bazaar Section?

27 responses

37% of the people blindly scroll through the Bazaar Section.

Follow us on LinkedIn

Solution 01: Connecting the user account with their FB Handles

Reason for addition: Following considerable friends/users is important before using the friends ranking feature. But, users are mostly reluctant to invest time following friends on every other platform.

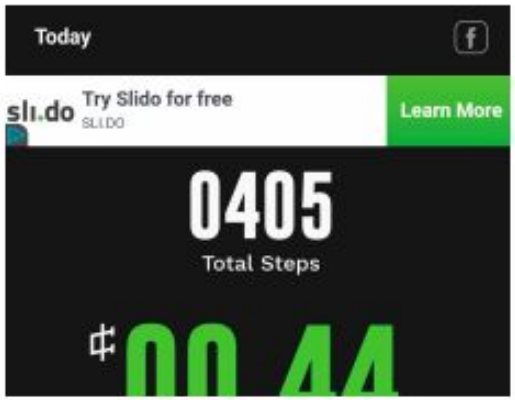

Implementation: On creating a SSG account, the user will be given an option to connect with their Facebook Account. If they don't do so at that point, they will have an option to connect with their account anytime via the 'Home/Profile' Page using the provided buttons**(4.1 & 4.2)**.

Change: When a user connects with their FB account, (s)he will be automatically following their FB friends already using SSG. Also, they will get followed in the similar fashion.

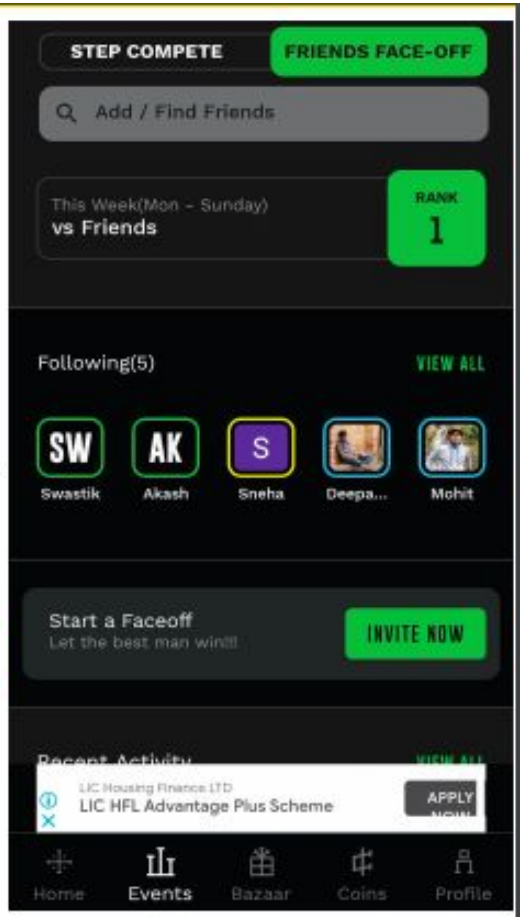

Impact: For any user, the change will increase number under 'FOLLOWING' & 'FOLLOWERS' on their profile. With this connectivity, the comparison happening under 'Weekly Performance' will be more competitive.
This will help in inculcating competitive spirit in users and push them towards coming into picture in their peer circle. Hence, the motivation levels are likely to improve**(4.3)**.

4.1: Profile Section

4.2: Home Section

4.3: Events Section

"This addition will directly impact the Friends Face-off feature explained in Solution 02."

Follow us on LinkedIn

Solution 02: In-app competition between users

Reason for addition: In the absence of interactive features, the user motivation level might easily reach a stagnant level and start decreasing in a few months time.

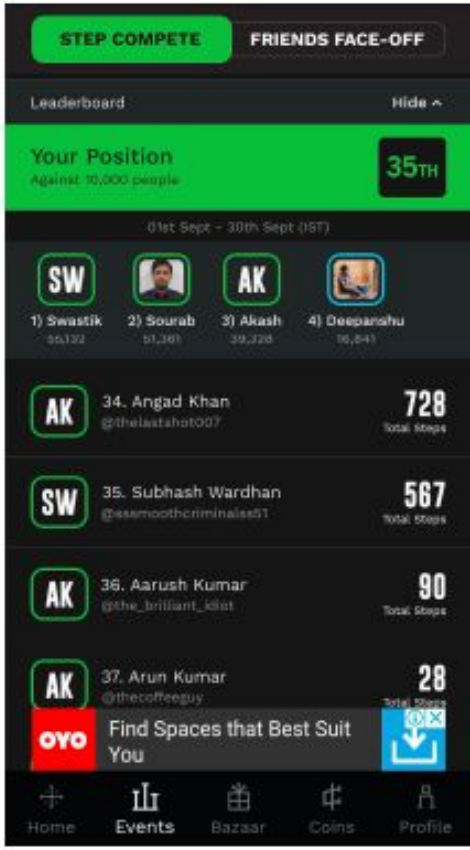

Change: The current section of 'Friends' will be changed to 'Events'. This will have both 'StepCompete' and 'Friends Face-off' options as two buttons on top of the screen.

Existing user literacy: To inform about additional features,

Mobile Notifications: Every 5th day for first 30 days, three days before & on starting day of StepCompete.
In app Notifications: Every 15th day for Friends Face-off and ten days before start of StepCompete

- **StepCompete:**
  Implementation: These will happen between all users of the cluster, irrespective of whether they are following others or not.

COMPETITION AND INCENTIVE BOARD			LEADERBOARD INCENTIVES	
LEVEL	**TIME DURATION**	**CLUSTER DETAILS**	**1st**	**2nd to 10th**
I	15 Days	People per cluster = 5000	150 SSG Coins	100 SSG Coins
II	10 Days	Clusters combined = 500	Physical Gift Hamper	250 SSG Coins

5.1: User ranking

Winner Recognition: Profile photo of ultimate winner will be visible where users see their position during live competition(**35th in 5.1**).

Impact: Because of clear competition involved between all the users, this feature will be helpful in adding-on to the motivation levels. This will help in attracting the stagnant and new users from peer group of current users.

v.nnd.2015.06

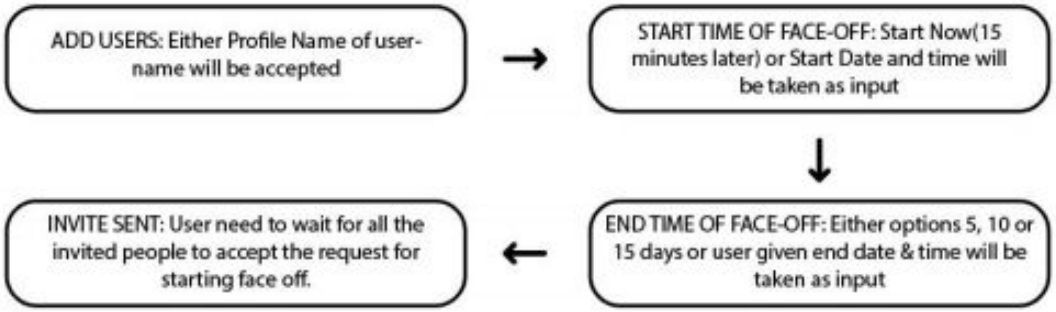

Follow us on LinkedIn

- **Friends Face-off:**

Change: The users will see an 'INVITE NOW' button just below the 'Leaderboard' in the 'Friends Face-off' tab of 'Events' Section.

Implementation: These will be user initiated competitions which one will be initiable only between friends mutually following each other.

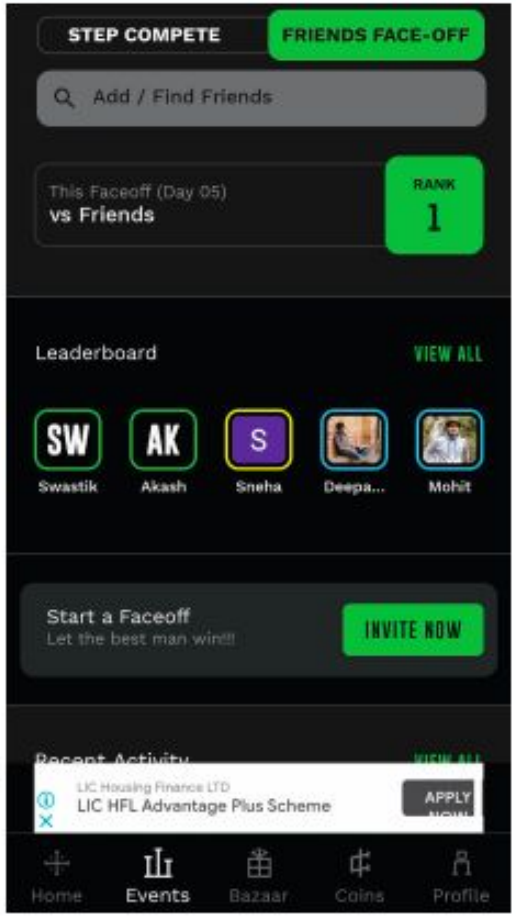

On hitting the 'INVITE NOW' button, the face-off creating user will follow the following steps:

On the start date at destined time, the faceoff will automatically start between the users who accepted the invite.

In case of an ongoing Face-Off, , the users will see their Face-off Rank on the screen. On other days, user will see a Rank as compared to the users they will be following then(**6.1 at location RANK 1**).

Impact: For the existing users, it will add a factor of interest by making them start their own competitions. This will push existing users to actively use the app and will also bring new users from their close peer group without any additional marketing expenses.

6.1: Friends Face-off

Sol 03: Notification & target mechanism to improve Bazaar usage

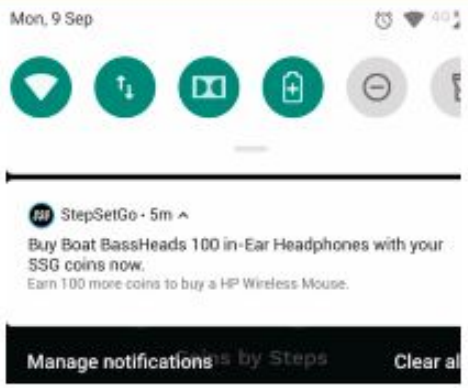

Reason for addition: Loyal, long term and motivated users regularly gaining maximum possible coins have sufficiently high number with them. But, they are rarely told about what they are eligible to buy or how many more coins they need to buy their favorite product.

Change:

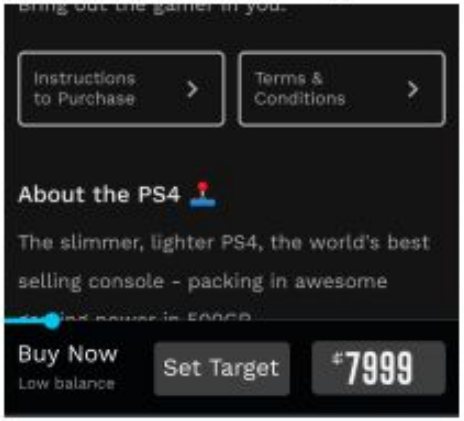

NOTIFICATION	IN - APP NOTIF.	MOBILE NOTIF.	REF. PICS
	Time b/w Notif.	Time b/w Notif.	
What they are eligible to buy now & what they can after getting some more coins	Once every two weeks	Once every 10 days	7.1 & 7.2
How many more coins they need to buy their targeted product	Once every 7 days	Once every 15 days	7.3 & 7.4

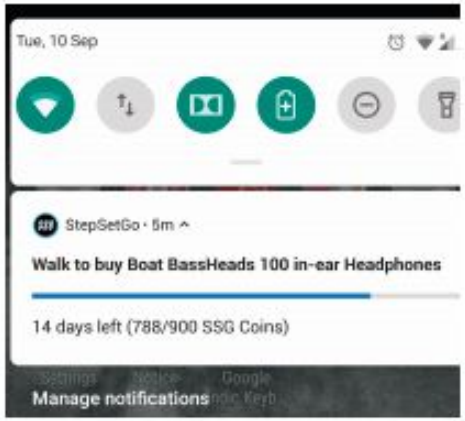

7.1: Home Page

7.2: Mobile Notif.

7.3: Bazaar Section

7.4: Target Product

Note: *The images show only relevant part of the screen.*

Impact: This will improve a user's probability of visiting the 'Bazaar' Section. It will also push them to walk more, stay motivated and get their favorite product. The sub-sized content written in line two of the notifications and target bar will encourage the user to keep trying and pushing them to earn and come back to buy a product.

Solution Validation: Sol 01 & 02

Which of these can improve your interaction with the app?

43 responses

Solution Validation: Sol 03

- Push notifications can increase app engagement upto 88%.
- 65% users return to app within 30 days of usage on enabling app notifications.
- Sending push notifications increases app retention rate by 3 to 10 times.

Source: 6 Stats That Prove How Crucial Push & In-App Messaging Are to Your App Success

Comparison and Selection of Solution

The comparison is done on the scale of 0 to 5, with 0 being the worst and 5 being the best.

IDEA	Ease of Implementing	Usage Simplicity	Feature Appeal	Impact Created	Problem Solving Probability on implementation		Average Score
					Short Term	Long Term	
01	5	5	4	4	4	4	4.33
02	4	4	5	5	5	4.5	4.58
03	5	5	4	4	4	4.5	4.42

Based on the mentioned factors, **second solution** seems to be working good and hence is the best solution.

v.nnd.2015.06

Follow us on LinkedIn

Short term Success Metric Measurement

On start of highlighted week, the new features were implemented(Click here for sample analysis).
Greater the motivation level, higher will be the average steps walked per week. Hence, the week after week change in this value will directly reflect the variation in user motivation level.

	VALUE	CONCLUSION
A = (Avg. step till last week) - (Avg. step walked per week till week before last week)	>0	Motivation level went up from last week
	~0	No obvious changes in the motivation level
	<0	Motivation level went down from last week

Long term Success Metric Measurement

With increasing motivation, the number of coins are expected to increase. This will increase the 'Bazaar visits' and 'Product Purchases', either directly after opening the app or via the notifications received.

	VALUE	CONCLUSION
$\frac{\text{Avg Bazaar Visits per week(2 months after feature launch)}}{\text{Avg Bazaar Visits per week(Before feature launch)}}$	>1	User had a comparatively higher motivation than before, and hence (s)he visited bazaar to spend the hard earned coins
	~1	Competitions didn't create awareness about other app offerings
	<1	Competitions didn't push user to stay motivated, and hence user didn't add on sufficient coins to visit Bazaar for spending

vinnd.2015.06

Follow us on LinkedIn

Failure Possibilities

- **Evolving frequency:** As it won't be easy to regularly evolve the two competition features with time, the user motivation level might decrease with time, after hitting a better than previous high.
  In graph,
  Section 01: User motivation level just after feature launch
  Section 02: User motivation level short time span after launch
  Section 03: User motivation level long time span after launch

- **Leaderboard competitiveness:** During 'StepCompete', if the percentage of users actually fighting for leaderboard positions is low, that would mean that the competition isn't attracting larger portion of users. In such case, the solution will be called as failure.

  This will be calculated by the gap in number of steps walked by the top walkers of the leaderboard and the percentage of walkers covering more than their usual 'Average steps per day'.

- **Competition organizing frequency:** StepCompete will be a company organized event, and 'Friends Face-off' will be a user organized event.
  - Competitions like StepCompete can't be organized too frequently by the company. On a rough estimate, they can happen only twice or thrice every year. This low frequency of organizing might make it a failure.
  - Competitions under 'Friends Face-off' might be initiated quite frequently. Lower the percentage of users performing better than their average performance, lower will be the value created by them.

Solution by

Sravya VSV

Problem statement

Digital Product: **SWIGGY**

Despite Swiggy's superior recommendation system, an average user spends 35+ mins/order deciding what to have. Decision making further slows down because most users open the app when they are hungry.
This makes ordering food online a time consuming chore.

My Story

It's Lunch time and I open Swiggy app to order food.

3 out of 10 recommendations are sweet shops (I never ordered sweets from Swiggy). 5 out of 10 are biryani places (not in the mood for biryani today).

I spend 40 mins searching for different cuisines and restaurants.

I get flustered, unable to decide on what to have. I close the app and make maggie at home.

v.nnd.2015.06

User Persona

Millennial
Age: 21-35
Working Professional
Lives in Metro cities

Behaviours:

- Self confessed foodie who can't be bothered to make meals at home
- Orders food online 7+ times a week
- Spends 35-40 mins per order in deciding what to have

Need for variety: **Medium**
Preferred Delivery Time: **Low**
Restaurant Rating: **High**
Willingness to Pay: **Medium-High**
Willingness to spend time: **Low**

Follow us on LinkedIn

Current User Behaviour

Time spent to decide reduces when the user know either what to order or where to order from

Journey 1: I know exactly what I want to have

Total Time taken: ~2 mins

Search for the restaurant ~30 secs → Select the dish ~30 secs → Place order ~1 min

Key Influences:
- Friend's recommendation
- Craving for a particular dish

Journey 2: I know what dish I want to have but not restaurant

Total Time taken: ~ 11.5 mins

Search for the dish ~30 secs → Browse through available options ~5 mins → Compare & Shortlist ~5 mins → Place order ~1 min

Key Influence:
- Craving for a particular dish
- External trigger - Visually

Journey 3: I don't know what to have

Total Time taken: ~ 36 mins

Scroll through the news feed ~15 min → Random search for restaurants ~10 mins → Browse through available options ~5 mins → Compare & Shortlist ~5 mins → Place order ~1 min

Key Influence: **HUNGER!!**

Pain Points

1. **Decision Fatigue:** I get confused about what to order when I don't know what I need.
2. **Analysis Paralysis:** I go back and forth between news feed and search to find something I like. Shortlisting and comparing takes time even after deciding what to have.
3. **Low Discoverability:** Even though Swiggy offers a variety of restaurants, discoverability is low. Filters on the homepage are not easy to use.
4. **Time consuming:** An average user spends ~36 mins on the app before ordering food.

What helps the user decide?

1. Recommendations from friends
- 95% users are more likely to try out a restaurant after a friend's recommendation
- 80% users are more likely to order a dish if they see picture of the same on social media

2. Pictures!
- Human brain can comprehend pictures 60,000 times better than words
- Avg 17 mins time is saved in deciding when the user can visualize the available options

Follow us on LinkedIn

Why is it a big deal?

Scope of the problem

244.8 million hours/year

are spent searching for restaurants online on various platforms. There are about 20.4 million monthly "restaurant" search queries globally. *(Source)*

35+ mins/ order

are spent by an average user try to decide what to order on Swiggy. (*Data gathered through primary research involving user interviews and a survey*)

72%

Users find searching for a restaurant online tedious and don't enjoy the process of ordering food. *(Source)*

1 out of 3 users

don't order online as often because of decision fatigue (*Data gathered through primary research involving user interviews and a survey*)

Existing solutions in Swiggy & why they are ineffective

1. Recommendation system based on collaborative filtering
   - Collaborative filtering is a technique that can filter out items that a user might like based on reactions by similar users. It works by searching a large group of people and finding a smaller set of users with tastes like a particular user. Each user's appetite and food cravings are different at different time. Therefore, recommendations are not in line with user's preferences.

2. Filters
   - Currently, restaurants can be filtered only by cuisine and 'Offers & More'. Filters have a long list of cuisines. The user must scroll a lot to filter out the restaurants. Filters are not easy to use.

3. Popular Cuisines
   - On the search page and on home page, Swiggy shows popular cuisines as a tag with number of options available. This helps a little, but the suggestions are again based on purchase history, repeating the same set of recommendations.

We are spending more of our time thinking about food, choosing where we are going to eat and simply what meal we are going to have than enjoying the meal itself

v.nnd.2015.06

Follow us on LinkedIn

Solution 1: Swiggy Social

Swiggy Social lets you share your food delivery experience with your friends

Post your pictures and share reviews of your food delivery
Rate your overall experience as good or bad. Select which order and which item you want to post a review of.

Follow your friends to know their experience and recommendation
Follow friends and bloggers near you. Like and comment on their posts. Save the posts for the next time you want to order something similar

Order the same dish or similar items from restaurants near you.
Based on the order in the post, Swiggy shows similar restaurants or restaurants serving same dish

Studies show that people who take pictures of food to post on social media enjoyed their food more than usual. It becomes a part of their visual self-representation.

A ritualistic habit of posting pictures on Swiggy Social will not only have time saving benefits, but will improve overall customer satisfaction on a psychological level

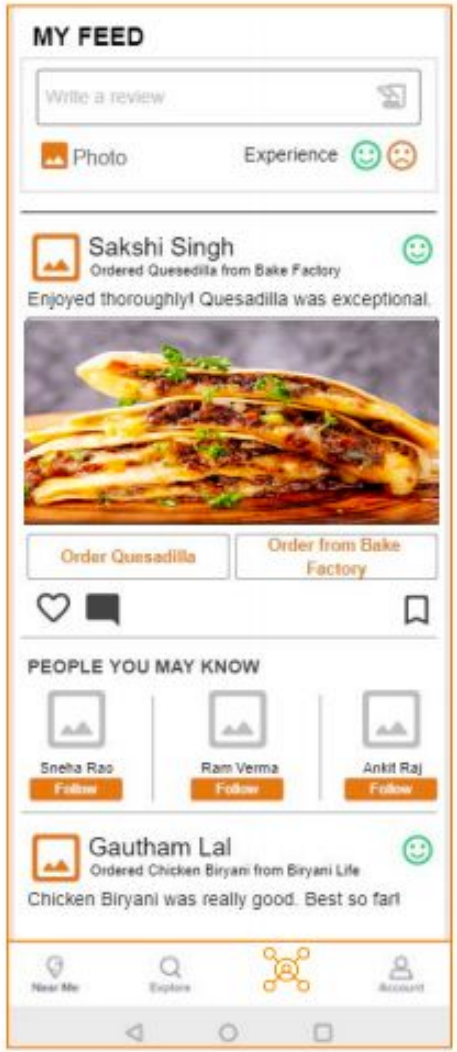

Benefits to the user

Save time through –

1. Peer Recommendations
2. Like something that you see - order the same dish.
3. Stay connected with your friends through food.

Benefits to Swiggy

1. Enhance customer experience by cutting down time to decide what to order
2. Achieve 2X growth in revenue & number of orders placed due to network effects of the social feature

v.nnd.2015.06

Follow us on LinkedIn

Solution 2: Subconscious Menu

Subconscious Menu is a digital menu that is controlled by user's retina using an eye tracking software. It uses a mathematical algorithm to assess and recommend the dish that suits best to the users taste real time.

How does it work?

Setup & Calibration
User is first asked to set up for calibration of eye movement tracking using front camera in their smartphone

Enter Subconscious Menu mode
User is shown images of yummy food of different cuisines and is asked to look at the screen for 2 mins. High resolution pictures of user's eyes are taken to capture the pattern

Processing
The images are analysed through machine learning, image processing, and mathematical models. The amount of time spent on a dish is calculated

Results & Recommendation
Finally the dish that the user craves for is published as a recommendation. Nearby restaurants serving the dish is shown along with the variants.

Based on pilot tests, this technology predicts what the user wants to have with 98% accuracy in 2.5 seconds post collecting the data. Efficiency, however varies depending on the model used. *(Source)*

Heat maps are generated on the screen based on retina movement

v.nnd.2015.06

Follow us on LinkedIn

Solution 3: Swiggy Swipe

Swiggy Swipe is a questionnaire based decision aid based on Adaptive Choice-Based Conjoint Recommender System. Choices are pictures for faster decision making.

Conjoint analysis is a survey-based statistical technique used in market research that helps determine how people value different attributes (feature, function, benefits) that make up an individual product or service. *(Source)*

1. Screening

- User is shown attributes that affect their decision making such as Delivery time, Restaurant rating, Cost for Two, Veg/Non Veg, Offers, etc
- For each attribute, user is requested to choose 'Unacceptable range' & 'Must have' levels.
- Screening values typically remain constant. Therefore, the user would have to enter only once.
- Screening values will act as comprehensive filters for restaurant recommendations at the end.

2. Choice Tournament

- After screening, the user will be taken to Choice Tournament screen where he/she is presented with two of cuisines/dishes per questions.
- User will be able to select only one option out of the two
- Aim of the tournament is to understand trade-offs and eliminate choices.
- Options shown to the user are adaptive in nature. Eliminated choices are not shown in subsequent questions.
- User is asked to answer an optimum number of questions before suggesting a recommendation

Results

- Each attribute and attribute level is given a part-worth (assigning a numerical value).
- The part-worth of each cuisine/dish is calculated and the cuisine/dish that has highest part-worth is presented as the final recommendation.
- Restaurants serving these dishes are then shown after filtering based on the screening values
- In case the user is not satisfied, he/she can start the quiz again.

The current recommendation system that Swiggy uses is based on reactions by similar users and it relies heavily on purchase history. On the Internet, where customers are known to be impatient (Banister 2003) and where available information is often overabundant, the trade–off between search costs and decision quality might very well be exacerbated. It is crucial for Food delivery platforms to offer recommender systems to help their users search more efficiently. (*source*)

The proposed recommender system captures the mood and need of the user real time through a simple questionnaire. It especially helps the user to eliminate and navigate through a variety of options by reducing decision fatigue.

Follow us on LinkedIn

Prioritization & Choice of Feature

Following parameters are used for prioritization

1. Effort to implement: Scale of 0-5 with 5 being highest
2. Impact: Scale of 0-5 with 5 being highest
3. Confidence about impact: 0-100%
4. Score = Impact * Confidence / Effort

Feature	Effort	Impact	Confidence	Score	Priority
Swiggy Social	2	4	50%	1	**2**
Subconscious Menu	5	5	90%	0.9	**3**
Swiggy Swipe	3	4.5	80%	1.2	**1**

Implementation Timeline

v.nnd.2015.06

Follow us on LinkedIn

Metrics – Swiggy Swipe

We will track the following metric to verify the usability and impact of Swiggy Swipe.

Acquisition:

1. Click-through rate for Swiggy Swipe
2. Unique Visitors/day
3. Churn Rate for Swiggy app

Engagement:

1. Session time for Swiggy Swipe
2. Bounce Rate for Swiggy Swipe
3. Top Exit Pages

Conversions:

1. Recommended vs Actual dish ordered
2. Daily number of orders
3. Avg time spent to decide on an order (time from app open to placing the order

Follow us on LinkedIn

Why would it fail?

Swiggy Swipe's recommendation system is intended to be used along with existing recommendation system.

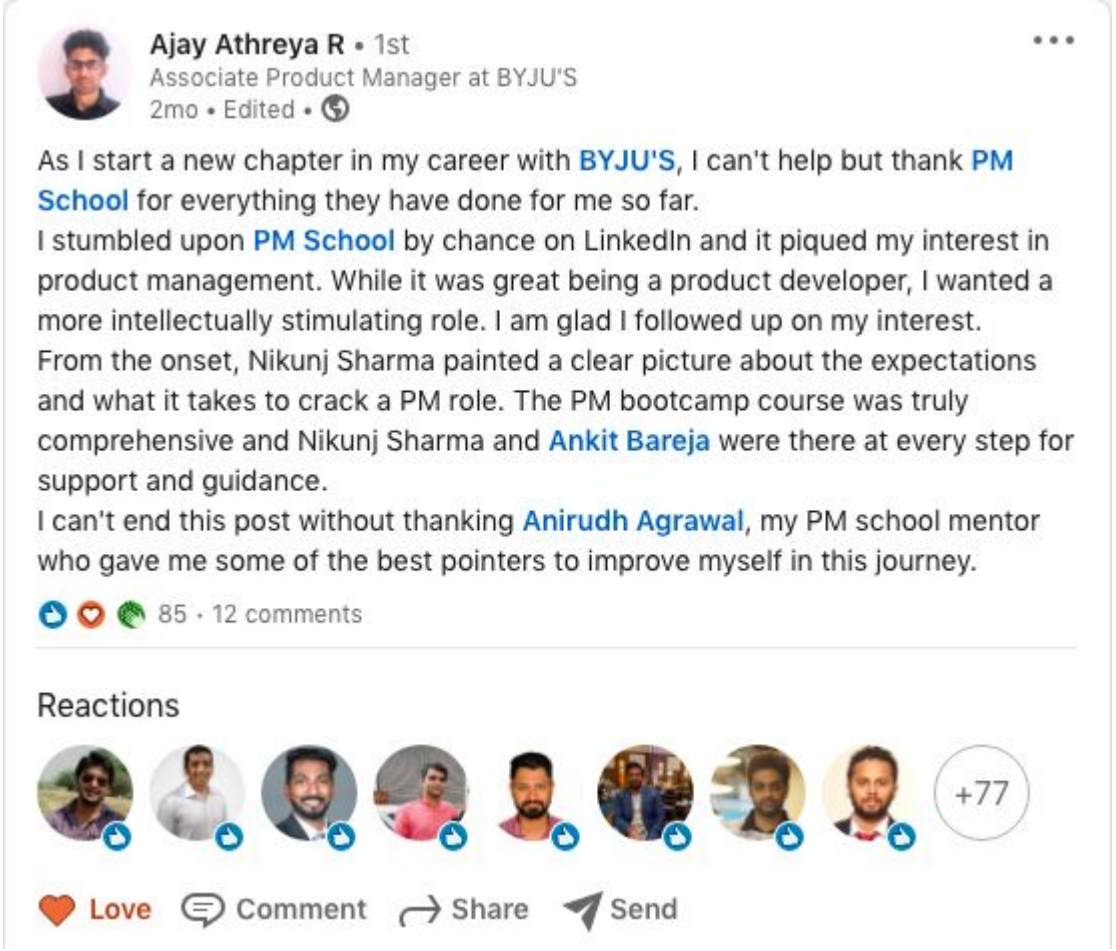

Potential pitfalls may include:

1. Users might perceive the feature as a 'survey' and be put off to engage with the feature every time.
2. Data provided by the user might not be sufficient, leading to inaccurate recommendations. There's a trade-off between optimum number of questions that need to be answered vs total time it takes to finish the tournament.
3. Complexity in implementation. Adaptive Choice Based Conjoint analysis requires a minimum and max number of attributes & attribute levels for it to work properly.

PM School Success Stories!

Ajay Athreya R • 1st
Associate Product Manager at BYJU'S
2mo • Edited •

As I start a new chapter in my career with **BYJU'S**, I can't help but thank **PM School** for everything they have done for me so far.
I stumbled upon **PM School** by chance on LinkedIn and it piqued my interest in product management. While it was great being a product developer, I wanted a more intellectually stimulating role. I am glad I followed up on my interest.
From the onset, Nikunj Sharma painted a clear picture about the expectations and what it takes to crack a PM role. The PM bootcamp course was truly comprehensive and Nikunj Sharma and **Ankit Bareja** were there at every step for support and guidance.
I can't end this post without thanking **Anirudh Agrawal**, my PM school mentor who gave me some of the best pointers to improve myself in this journey.

6. Bigbasket Case Study Challenge by PM School

Case Background:

Please download and use Bigbasket.

Grocery space has been heating up. Recently, Bigbasket was also in the news -

https://theprint.in/economy/tata-set-to-buy-80-of-bigbasket-as-race-to-dominate-indias-online-g r ocery-heats-up/555655/

Problem Statement :

You have joined as a PM at BigBasket and have been entrusted with the task of the next phase of growth. You need to create Power Users, i.e., users who are super-loyal to BigBasket.

- Come up with 3 Product solutions to drive this. Think Big!
    - Avoid solutions like push notification, email, UI tweaks, etc.
    - Hint - Check out what is happening in grocery tech across the world
- For any 2 of 3 solutions, provide wireframes and explain the solution in detail (Balsamiq/Figma wireframes preferred)
- Align metrics for the above 2 solutions
    - Avoid writing HEART Metrics just for the sake of it
- Publish a press-release (blog post) announcing the launch of your initiatives

Follow us on LinkedIn

Solution by

Mohit Doddi

Big Basket:

Creating Power Users

Enhancing the product to create super loyal customers to the Grocery-Tech company

Mohit Doddi

About Big Basket:

- BigBasket is an online marketplace of grocery products. It allows users to purchase products across various categories including fruits, vegetables, staples, baked products, snacks, beverages, personal care products, baby care products, etc. of multiple brands.
- Tata Group in advanced talks to buy 80% stake in BigBasket for $ 1.3 bn.

28 Cities

6 Mil Customers

20000+ Products

4.4 Rating

Competitors

GROFERS

milkbasket

PepperTap The Grocery App

SUPR DAILY

Problem statement:

There is a lot of dissatisfaction among the customers & there's a lot of churn happening.

Goal:

Create Power Users i.e super loyal customers to Big Basket thereby reducing the churn & increasing customer satisfaction.

What problems are they facing?

Follow us on LinkedIn

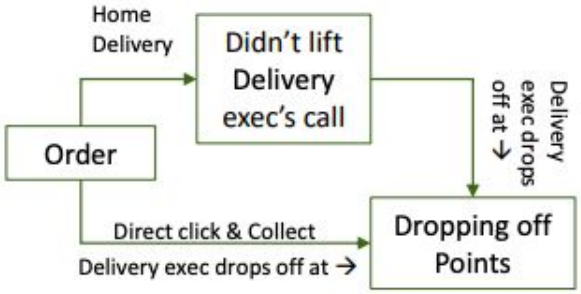

Why & How do I solve the problems?

Goals	Solutions		
Increase Customer Satisfaction	• Delivery executive drops off the order in the nearest kiosk or Trent Hypermarket **BB Click & Collect**	• BB tracks the life of perishables based on it's picture and suggests to the user. **BB Shelf life Tracker**	• The customer can voice order his whole list of groceries making it easier for them. **Voice Ordering**
Increase Customer Life Time Value			
Reduce Churn Rate	• Customer Care can be channelized through the Chat Bots with the huge # of complaints. **BB Chatbot**	• Like our nearby kiranawala, BB allows it's star users to buy now and pay later. **BB Khata**	• Just not the direct search and voice ordering. Searching based on recipes and ingredients. **BB Recipe Search**
Increase Referrals			

Follow us on LinkedIn

Feature 1: BB Click & Collect

Work Flow:

Dropping off Points:

1. **Super Market:** With the latest acquisition by **Tata**, we can leverage it's 36 **Trent Hyper & Supermarkets** for starters.

2. **Kiosks:** BB has a great network of kiosks under **BB instant**. Using them as storage for a customer nearby.

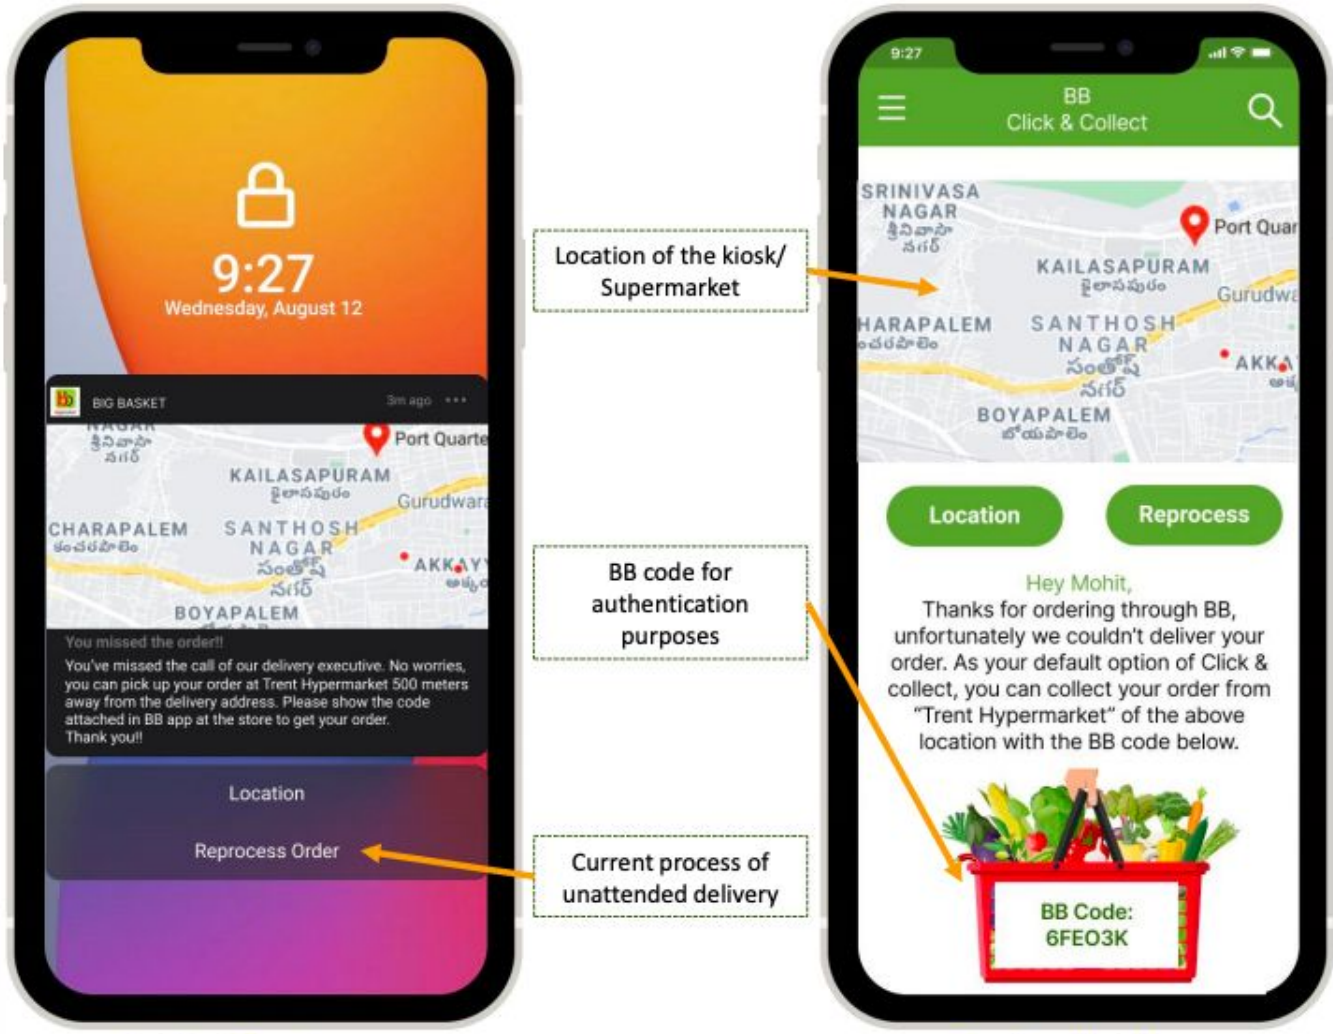

Metrics:

% Unattended Deliveries:

$$\frac{\#\ of\ Reprocessed\ Orders}{\#\ of\ Orders}$$

CC to RP Ratio:

$$\frac{\#\ of\ Collected\ orders}{\#\ of\ Reprocessed\ Orders}$$

1. Notification

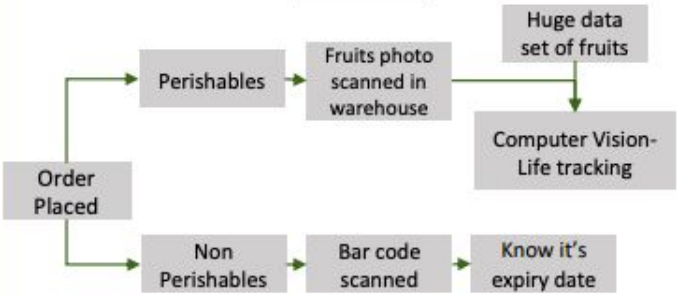

2. Application

Follow us on LinkedIn

Feature 2: BB Shelf Life Tracker

BB Shelf life tracker helps us to track the life of perishables and notifies us when they're about to be spoilt.

Process:

Science & Tech Behind it:

Fruit freshness grading via computer vision technology exploits on the fruit texture, colour, shape, wholeness, spots, bruises, and blemishes for visual feature evaluation and can reflect the speed of fruit deterioration.
Check out this research paper for more info

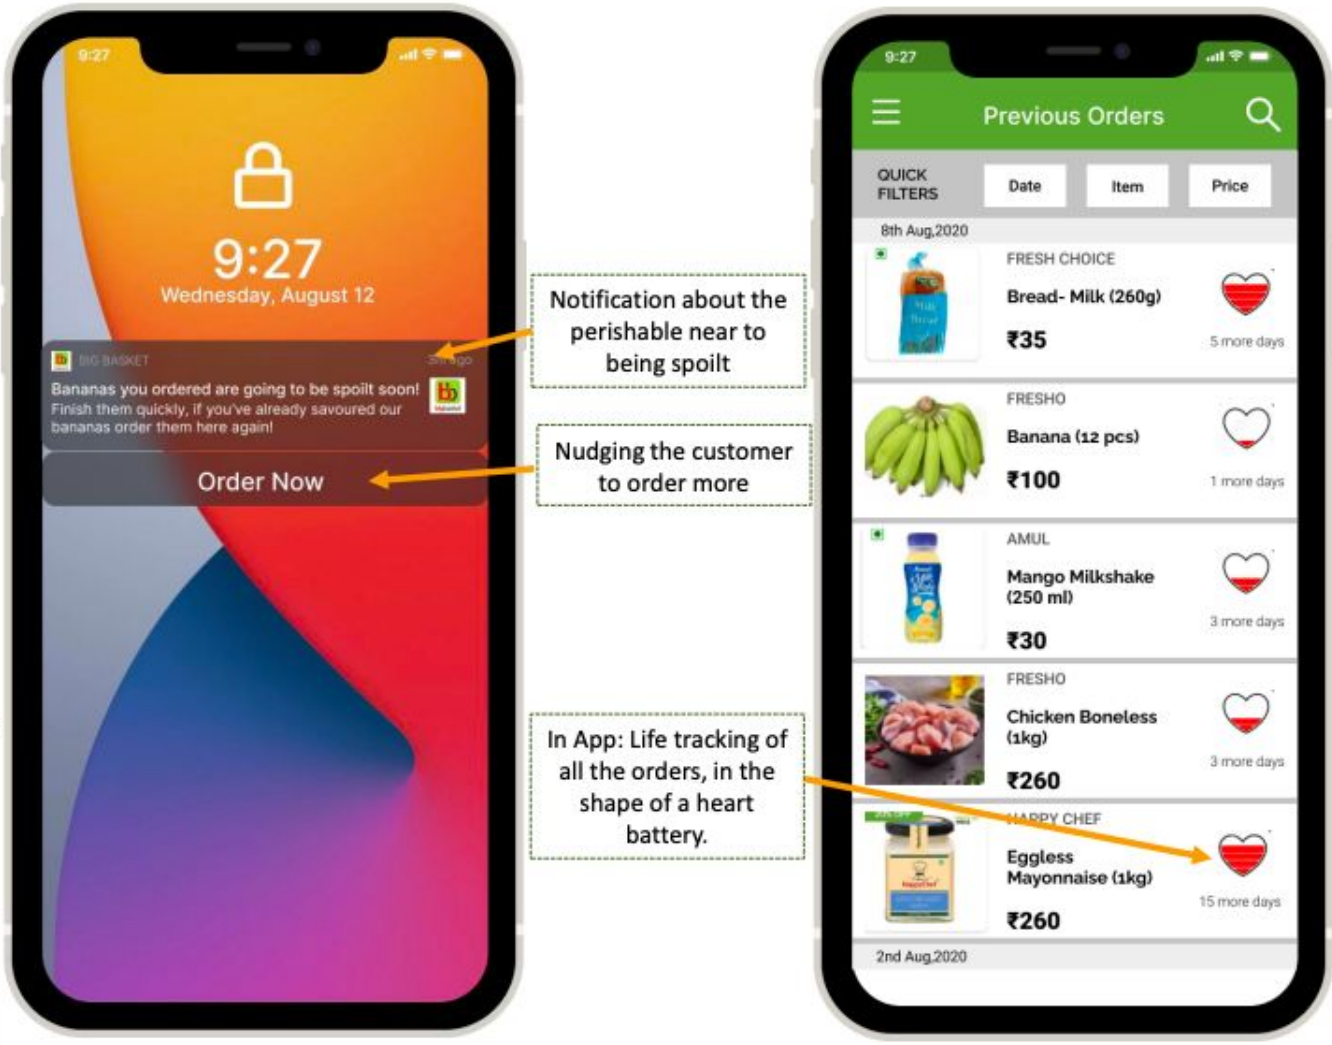

Metrics:

Click-through Rate:

$$\frac{\#\ of\ clicks\ on\ "Order\ Now"}{\#\ of\ Notifications}$$

Average Time to Reorder

Frequency of Reorders/mo

Follow us on LinkedIn

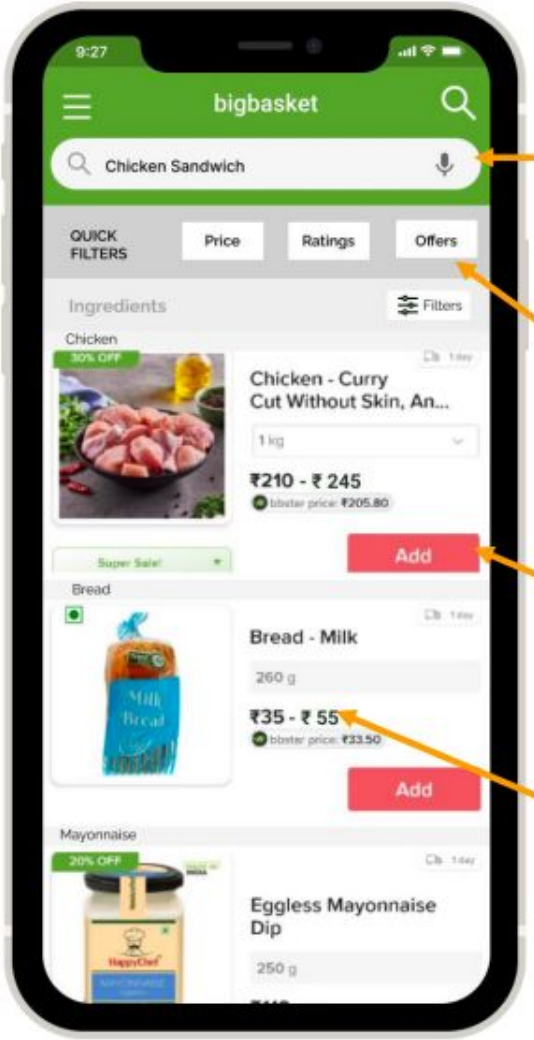

Feature 3: Innovative Ordering

a) BB Recipe Ordering:

- The Job to be done is cooking a recipe, hence it make logical sense to allow recipe based search.
- For making this technologically possible, we need to create a directory of recipes, which can be directly scraped from many cookbooks in internet and using NLP we can create a dictionary of ingredients for every recipe.
- Use Case: We can nudge people to order more especially during festives, events ; for example: **" Make yourself Sabudhana Kichidi this Navaratri, order the ingredients from here"**

b) BB Voice Ordering:

- Voice Order helps to place order directly, which can basically eliminate the tedious search process, decrease the time to place an order, and save the user's time.
- This can help in increase the adoption of Big basket among Baby Boomers & Gen X
- Technologically the speech software breaks down the audio of a speech recording into individual sounds, analyzes each sound, using algorithms and find the most probable word which fits in that language, and transcribes those sounds into text.

Recipe Based search & Voice Ordering

Shows us the results available based on price, or ratings or the best combo available which we can benchmark with the actual "Chicken Sandwich"

We can delete few items or change the quantity if we wish to.

Price Ranges shown for each ingredient and allows us to select our favourite brand

Follow us on LinkedIn

Other Explorable Solutions:

BB Khata

How BB Khata can revolutionize the Grocery industry?

- Khata basically means an account held with a merchant, in general connotation when you have a debit and credit relation with the merchant.
- Indian kirana's mainly run on trust hence they allow "Buy Now Pay Later" (BNPL) with regular customers.
- So BB Khata is a microcredit facility mainly available to few creditworthy customers (or simply BB star) where you can buy now and pay later maybe at the end of the month.
- This Post paid grocery purchases mainly appeal to the millennials and Gen-Z who relatively extend their expenditures.

Metrics Used:
Number of Khatas, Credit to total consumption, Average Payback Time

BB Chatbot

Current Problem:

- No(queries) >>>> No(Queries Handling Capacity). Hence there's a time lag
- 40% of the queries are related to availability of certain groceries/ increased price after ordering.
- 45% of the queries are related to delivery issues and refund of money into the BB wallet rather the source bank.
- 10% of the queries are related to BB star membership

How BB chatbot solves the problem?

- Simply classifies all the queries into different buckets and issues tickets.
- Solves few problems like Star Membership & refunds directly from the chat.
- Better data storage and analytics can done to investigate and make the processes faster.

Metrics Used:
Number of Queries resolved, Average time taken to resolve a query

* Sampled from 30 Critical reviews about customer care

We have acquired new customers by value three times, by number of orders three times and by number of members 2.6 times as compared to pre-Covid — Hari Menon, CEO, BigBasket

By 2030, Every home will buy groceries from us : Big Basket CEO

Consumers are getting accustomed to buying groceries online and order volumes continue to remain higher than pre-Covid levels and by 2030, every home will buy groceries from us, said Hari Menon, co-founder & CEO at BigBasket.

"We are very clearly seeing the shift to online. One of the things that we are reasonably clear on right now is in spite of unlock 4 or unlock 5, whatever is that number, we are seeing retention.....this makes us feel confident that this behaviour is there to stay," Menon said at a virtual conference on Thursday.

The press conference also saw Big Basket launching it's new features which the CEO claims to revolutionize the whole online grocery market. With the whole Omnichannel buzz around, BB launched it's new delivery system "Click & Collect" where you can opt to directly collect your order from a nearby center which can make the delivery process 5X faster. The company has also launched the Beta version of the "Shelf Life Tracker" where BB tracks the life of perishables based on it's picture and suggests to the user with the help of Computer Vision.

The CEO also claimed that the BB shelf life tracker will be a much value add to the Indian customer as BB will notify when a perishable they delivered might be spoilt. BB has also put a great emphasis on the customer interaction where they launched speech recognition and recipe based ordering. Their work on tech and R&D is commendable and is improving the whole ecosystem. Hari Menon also mentioned few of their future plans of launching a BB chatbot to improve the customer service. With all this said, the show stealer was the feature BB Khata were you can buy now and pay later, they're trying to appeal to the millennials and Gen Z by giving them micro credit. With high expectations and the wafer thing margin industry, we'll have to wait and watch how BB is gonna disrupt the online grocery market.

7. Koo Case Study Challenge by PM School

You've joined as a PM at Koo. Koo is an India-first micro-blogging platform.

Recently, Koo has been seeing a surge in interest due to various reasons. Here's more for reference - https://indianexpress.com/article/explained/koo-app-features-twitter-explained-7182422/

Please download and use Koo from Play Store keeping in mind the target audience.

Engagement/Retention:

Koo has been seeing an increase in DAU but now wants to improve upon the DAU/MAU ratio, an indication of engagement/stickiness for any social platform. Suggest 3 Product solutions for the same.

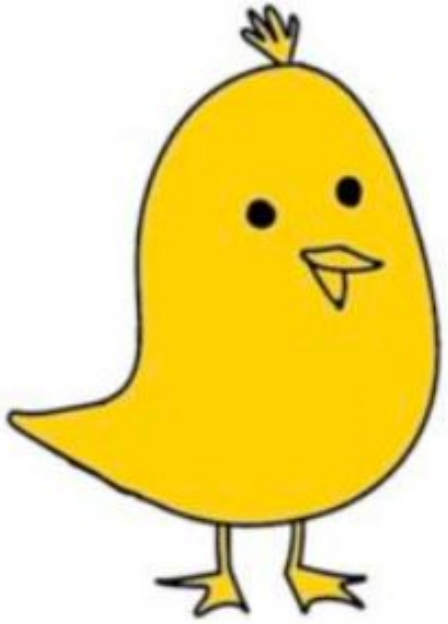

Consider the following :-

- How would you market the value proposition to a user of Koo?
- How would you design it to increase the engagement? (Keep India/Bharat users in mind while designing. Balsamiq, Figma wireframe preferred)
- What are the key metrics you'd measure for both the features?
- Write a blog post announcing the launch of your Product solutions. For the above, please state any assumptions you make.

Follow us on LinkedIn

Solution by

Aseem Juneja and Kushagra Agarwal

KOO

—A CASE STUDY BY ASEEM & KUSHAGRA

Koo is a micro-blogging platform just like Twitter. What makes it special is that it is an Indian startup and comes in many different Indian languages.

Follow us on LinkedIn

Problem Statement

Koo has been seeing an increase in DAU but now wants to improve upon DAU/MAU Ratio, an indication of engagement/stickiness for any social media platform. Suggest product alternatives for the same.

Complete UX Study

Find the detailed UX Study of the app to find possible pain points - https://tinyurl.com/7oarfix5

Digging Deeper into the Problem

Increasing DAU/MAU means we want to make our monthly active users, daily active, in short increasing the app stickiness. So we need to think our solutions in that sense. So let's first see all the task a user can perform. We need to somehow make the user complete these tasks often or we need to add some new task to the list.

1. Koo, ReKoo
2. Complete/Update their profile so that they are more visible to others and people follow them
3. Read, Like, Share Koo's
4. Chat with Followers
5. Find new people

Along with this, we also need to somehow motivate users to perform all above 6 tasks, but how ? 🤔

Koo UX Study - https://tinyurl.com/7oarfix5

Follow us on LinkedIn

User Personas

Pramod Singh

Pramod Singh is a resident of Punjab and **loves the Desi Version** of Twitter i.e. Koo. He uses the app just to read Koos and wishes for the success of Koo App.

Pain Points:
1. He feels shy in writing Koos.

2. Always opens app to read but sometimes fails to get context of the trending Hashtags and then leaves.

3. Finds app very slow.

Srinivasan Mahajan

Srinivasan Mahajan is a resident of Kolkata and aims to become a **blogger**.

Pain Points:
1. He lacks the motivation to post. He needs someone to boost him to keep writing stuff.

2. He finds Twitter a better place to write as it has a larger audience and better reach.

Follow us on LinkedIn

Solution 1: Group Chats

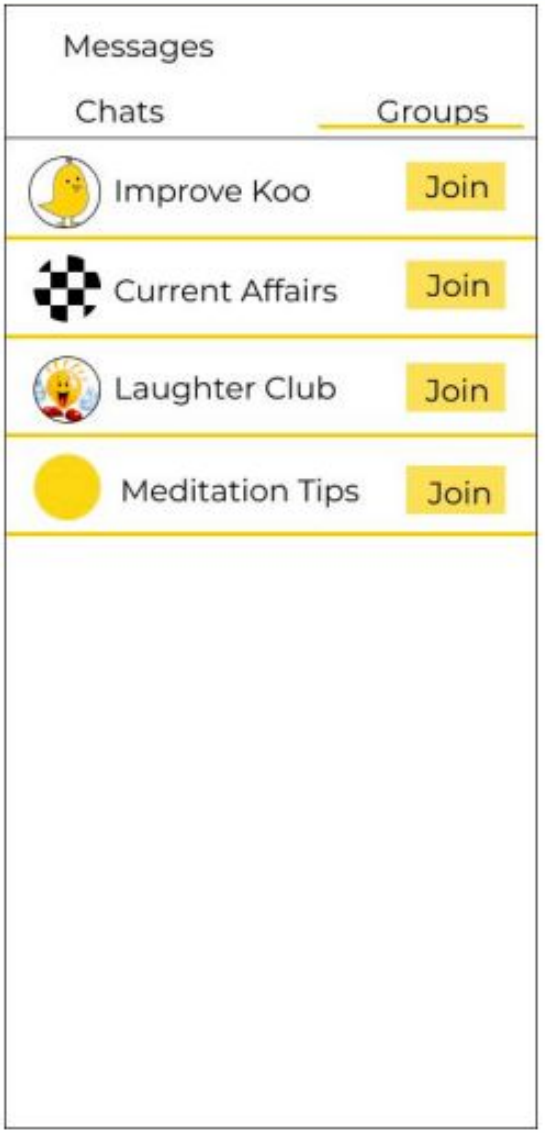

Why Group Chats?

Chat section is the least engaging section on app and there are many pain-points that need focus(as discussed in UX Study).

What is Group chat?

Letting users make groups or join existing groups which are open to all. (Study groups, general knowledge groups, religious groups, newsgroups and much more.)A place where people can share and express their thoughts only to a bunch of people with similar interests/aspirations.

1. This will become like an informal way of presenting views/sharing knowledge with people. Discussions can happen more lively.
2. This will also increase the reach of people and increase follower count as they can directly connect with people of similar interests and hence will make users more active on Koo.
3. There will be a separate option to request to make a group and the request will be accepted only for genuine people.

Follow us on LinkedIn

Monitoring Metrics

(From Content Viewers Perspectives)

$$\frac{\text{(Users who opened group Chats section)}}{\textbf{(Monthly Active Users)}} \times \frac{\text{(Users who joined at least 1 group after discovering)}}{\text{(Users who opened group Chats section))}} \times \frac{\text{(Users who open the group Once a week)}}{\text{(Users who joined groups After discovering)}} \times \frac{\textbf{Daily Active Users}}{\text{(Users who open once A week)}}$$

Solution 2: Quick Trending Stories

Why Stories?

A lot of topics trend on Koo. The motive is always to convey the happenings to the larger audience. But at times, Koo is not able to explain it concisely.

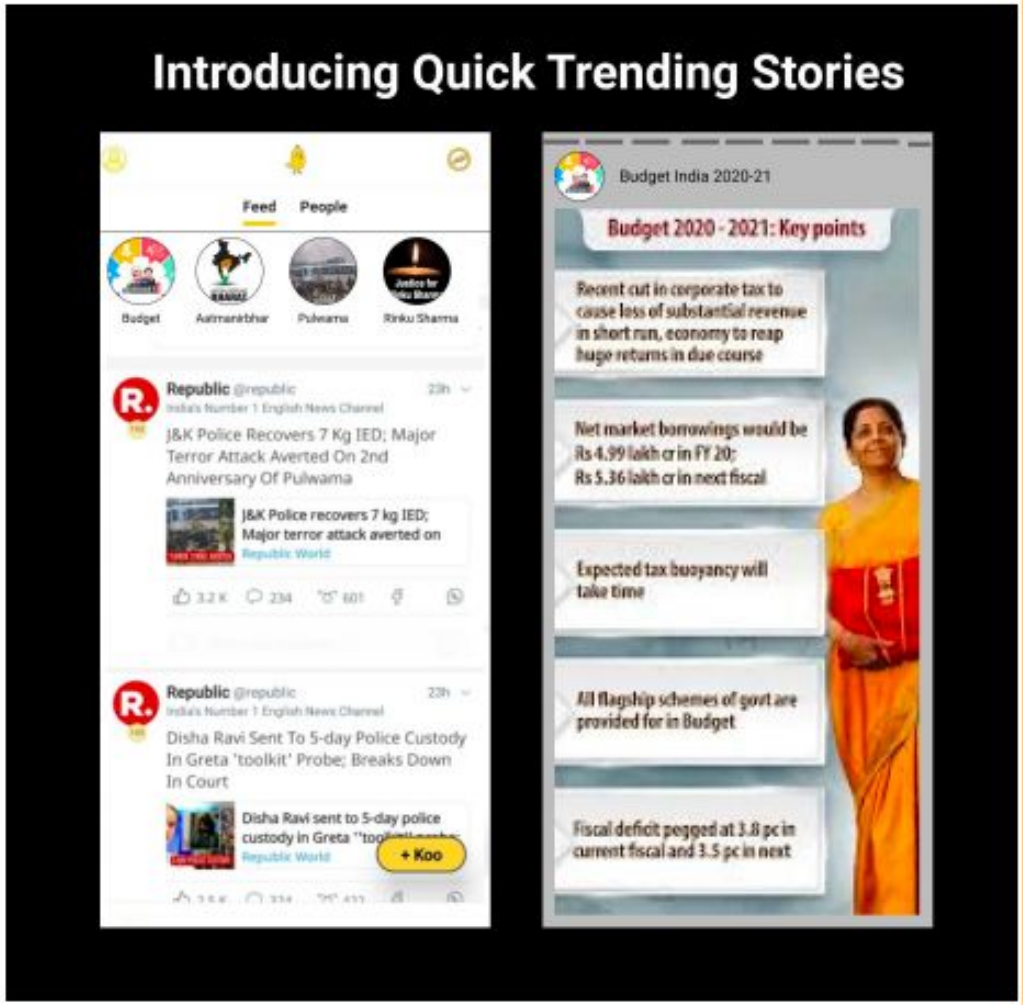

What's the Use-Case?

Introduction Quick Trending Stories, where Koo Team will be publishing stories for the 4 trending content of the day.

1. For content readers, this will be one-stop place to know about the top topics of the day by just visiting stories.
2. For content creators, this will become like another task to make there topic reach Koo Team so that they write a story on that.

A bit more about it...

This is a step to make Koo beyond just Twitter. The stories will be published/changed each morning based on the trending topics on the previous day. If it goes well, then later the number of stories per day can be increased. .

Follow us on LinkedIn

Monitoring Metrics

$$\frac{\text{(Users who opened stories once)}}{\textbf{(Monthly Active Users)}} \times \frac{\text{(Users who watched all stories)}}{\text{(Users who opened Stories once)}} \times \frac{\text{(Users who spent given ideal time to watch stories - approx)}}{\text{(Users who watched all stories)}} \times \frac{\textbf{(Daily Active Users)}}{\text{(Users who spent given ideal time to watch stories - approx)}}$$

Solution 3: Motivating Users with Koo Score

Why Koo Score?

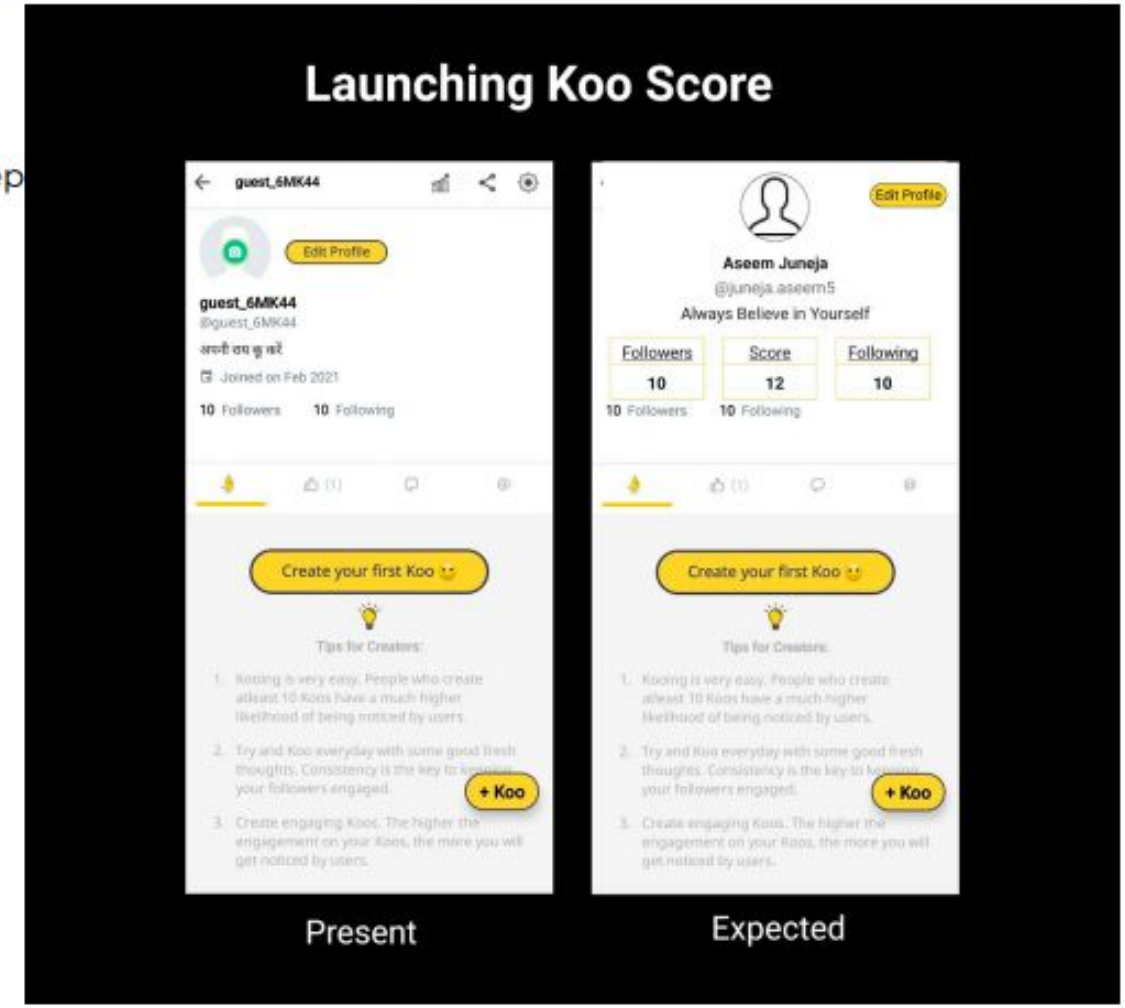

Rewarding is a proven technique to motivate people complete some work. The same can be used by Koo to keep people using the app. A Score can be given to each individual based on few parameters. This Score (in initial release), can be changed daily, based on activities in a particular day.

This Score can later be extended for particular field, like based on the type of content user posts.

How will the user benefit? :

More the score of people:

1. more their chances of getting followers
2. more chances their name will appear on top in search in Search bar
3. more chances their content will come on top in News Feed.
4. more chances they will get be discovered in relevant people list.

Follow us on LinkedIn

Parameters based on how active the user is:

Parameters	Importance	Challenges
No. of Koos Made	High	
No. of Re-Koos	High	A fake user might just Re-Koo a lot to gain Score.
Time Spent on Koo	Low	How this will be tracked? A user might just keep the App opened without doing nothing.
No. of Comments Made	Medium	
No. of shares made	High	

Parameters based on how much the followers like the content:

Parameters	Importance	Challenges
No. of Followers	High	
No. of Shares on Koo Made by User	High	
Score of People who follow you.	High	Some of followers might have low score, this should not affect. This score will be given only if high score people are following user. (No impact of low score people)

Follow us on LinkedIn

Parameters based on how much followers like the content:

Parameters	Importance	Challenges
No. of Hashtags, Koos that went in Trending	Medium	A user might just Koo whatever is trending. (This should not be forced)
No. of Re-koos on Koo Made by User	High	
No. of Comments on Koo Made by User	Medium	Maybe the user did something controversial and people are opposing it. (Need to track abusive language in future)

Some other important parameters

Parameters	Importance	Challenges
No. of people user messaged	Low	Maybe a spammer
No. of invites made (After adding this in Chats)	High	
Profile/Updation Completion	High

Blog Post

You asked, We Listened!

Koo has always been a customer centric app and we will continue to work on the same lines. We are constantly working on it to provide a better experience to you all. And on the same lines we are proud to launch Koo **Score**, Koo **Stories** and a new **Chat** experience to all our Koo customers.

Koo Score is directly linked with how our News Feed Algorithm works. You no longer need to figure out hacks to get viral. Just make sure you are consistently working on your score and if it's done, be assured that our algorithm will boost your every content.

With Koo Stories in place, you no longer need to google to find the stories of the new trending hashtags. We will be giving you the context/background of the top trending hashtags in the stories section on home page. Make sure to give a thumbs up if you like reading a story :) this will boost the morale of our content team.

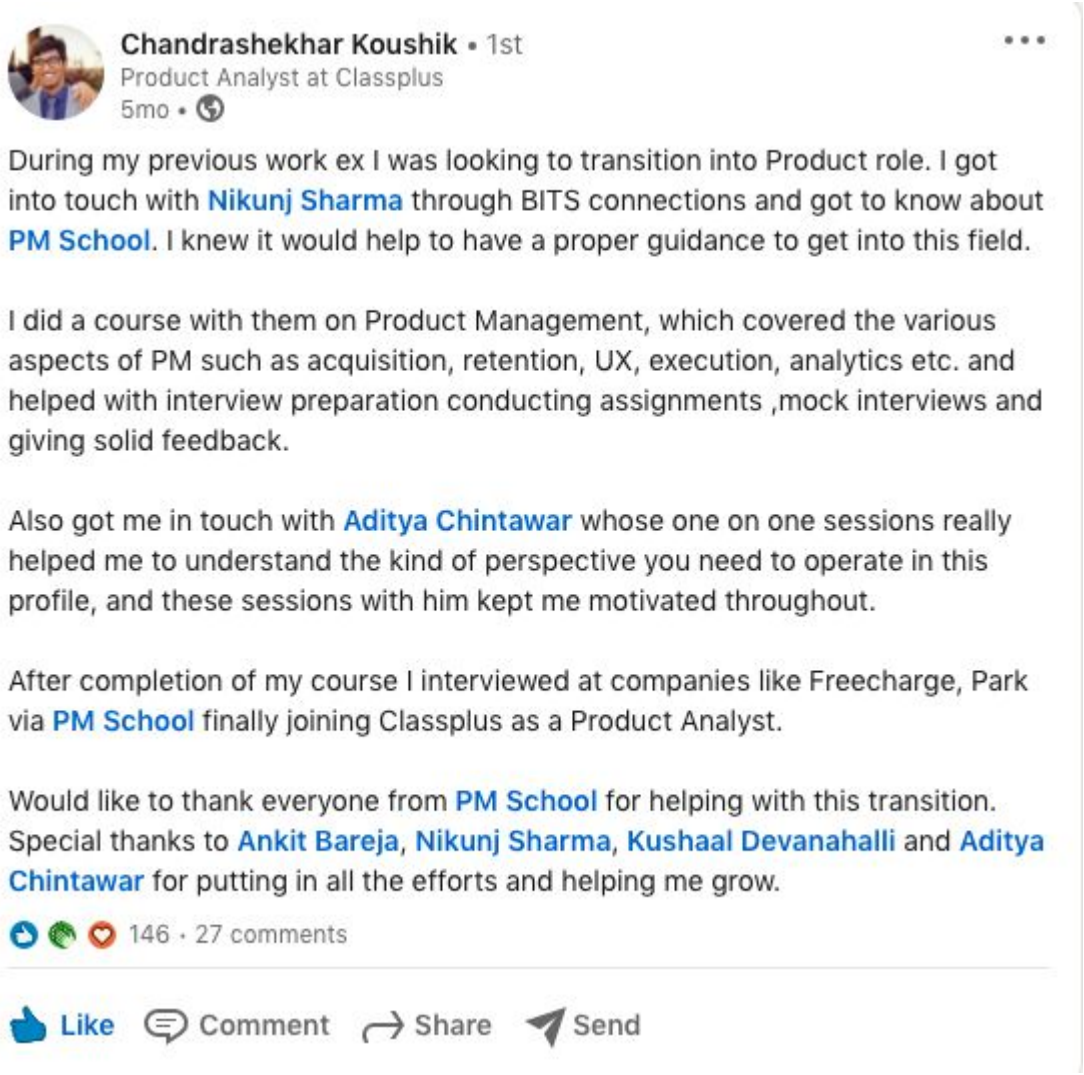

The new Chat experience is developed to help people connect with their brands/organizations/groups in a more informal way (that's how we define chatting), a way by which people of same aspirations can connect with each other and share their thoughts to a broader audience very fast.

Update yourself with the **latest version of the app** to get a new lively Koo experience. As our Sr. Product Manager says - "These are the 3 major product developments that are going to change how people use our App." We hope you all will love the features more than what we loved it while building.

- Your own Koo Team

PM School Success Stories!

Chandrashekhar Koushik • 1st
Product Analyst at Classplus
5mo •

During my previous work ex I was looking to transition into Product role. I got into touch with **Nikunj Sharma** through BITS connections and got to know about **PM School**. I knew it would help to have a proper guidance to get into this field.

I did a course with them on Product Management, which covered the various aspects of PM such as acquisition, retention, UX, execution, analytics etc. and helped with interview preparation conducting assignments ,mock interviews and giving solid feedback.

Also got me in touch with **Aditya Chintawar** whose one on one sessions really helped me to understand the kind of perspective you need to operate in this profile, and these sessions with him kept me motivated throughout.

After completion of my course I interviewed at companies like Freecharge, Park via **PM School** finally joining Classplus as a Product Analyst.

Would like to thank everyone from **PM School** for helping with this transition. Special thanks to **Ankit Bareja**, **Nikunj Sharma**, **Kushaal Devanahalli** and **Aditya Chintawar** for putting in all the efforts and helping me grow.

8. Netflix Case Study Challenge by PM School

Case Background:

Streaming giant Netflix recently made its service free on 5th and 6th December. More on this here - https://bit.ly/3m9NnAF . *Following a typical AARRR strategy, one of the objectives of Netflix StreamFest was to **Activate** new users by making them sign-up, watch free content, browse the titles so that they might eventually Convert, i.e., become paid subscribers of Netflix.*

Netflix faces stiff competition in India from the likes of Hotstar, Amazon Prime, SonyLiv, etc. Year-on-year growth of users has slowed for the last 2-3 years. More on this here - https://bit.ly/3oHdYXa

You've joined as a Product Manager at Netflix and have been entrusted with the task of growth of users.

- Come up with 3 Product solutions to drive this. **Think Big!**
  - Avoid solutions like push notification, email, UI tweaks, etc.
- Provide wireframes and explain the solution in detail (Balsamiq/Figma wireframes preferred)
- Align metrics for the above 2 solutions
  - Avoid writing HEART Metrics just for the sake of it :)
- Publish a press-release (blog post) announcing the launch of your initiatives

Solution by

Naafiah Sadique

About Netflix

Netflix, Inc. is an American over-the-top content platform and production company headquartered in Los Gatos, California. Netflix was founded in 1997 by Reed Hastings and Marc Randolph. The initial business model included DVD sales and rental by mail. Netflix's current business is a subscription-based streaming service offering online streaming from a library of films and television series, including those produced in-house. As of October 2020, Netflix had over ***195 million*** paid subscriptions worldwide

Mission: *"To entertain the world."*

Vision: *"To continue being one of the leading firms of the internet entertainment era."*

Netflix StreamFest launched in India on Dec 5-6 to allow non-subscribers to experience the service for free. The move was aimed at bringing new users to the platform.

Competitors:

amazon prime video | Disney+ hotstar | SONY liv | ZEE5

Problem Statement

YoY growth slowed for last 2-3 years due to stiff competition

Goal

Increase user acquisition and growth

User Personas

Personas	Abhay, Techie	Mansi, PhD Student	Liam, Senior Manager
Demographics	22 years old, Lives in Mumbai, Loves football and gaming	27 years old, Lives in Delhi, Stays in college hostel, Loves watching serials and reading books	36 years old, Married, Lives in Bangalore, Likes to stay up-to-date
Motivations	Spends leisure time watching Netflix. Likes action/adventure genre.	Netflix is a source of entertainment after long research hours. Likes drama/ comedy	Watches Netflix with family in the comfort of their home during weekends.
Pain Points	Gets bored of series. Feels inert after watching for long hours.	Feels lonely. Not able to watch along with friends/family staying in different places.	Absence of live news/sports/events. No time to watch long episodes.

Pain Points:

- Absence of live content
- Lack of intellectual stimulation
- Unable to watch with friends and family from different places

Follow us on LinkedIn

Solution 01

Netflix Theatre

Feature 01:

"Create Room" option lets the user create a room to which other Netflix subscribers can be added. The user sends a *"Movie invite"* to friends/family to join the room. This invite also includes details such as movie name and start time of the movie.

The friends will get the notification to join the room if they have Netflix subscription. Else they get a referral to subscribe to Netflix in order to join the room.

After the members join the room, the start time of the movie will be displayed. *Play/Pause* will be synchronized for all users in the room while the movie is played. Hence the users will watch the movie at the same time.

There will be a *"Chat option"* available to have lively conversation on the movie with all the room members.

Insights: There are third party extensions available to facilitate Netflix screen sharing. *Netflix Theatre* will help to facilitate the social bonding for the Netflix users through the platform. Hence this will also help in *acquisition* of more users.

User Value Proposition: This feature will help in increasing the user *engagement* by leveraging the *social interaction* with their close ones.

Success Metrics:

- No. of rooms created in a month
- No. of movie invites sent by a user
- No. of users joined a room
- Time spent by users in a room

Follow us on LinkedIn

Solution 02

Netflix Games

Feature 02:

A new category "N*etflix Games*" will be added.

Popular games will be displayed similar to the movies tile. It will have *multiplayer games* to foster social interaction that helps in acquiring more users.

Game Trailers will be displayed for the user to get a preview of the games before the user starts the game.

Leaderboard lists the users based on scores earned through games. Goodies given to the Netflix Star players.

Insights: Provide wider variety of entertainment for a larger audience. This requires onboarding the cloud game developers/providers into the platform.

User Value Proposition: Entertainment through intellectual stimulation and a platform to socialize with friends.

Success Metrics:

- MAU/DAU on games
- Duration of active game sessions
- No. of players in a game
- Time spent by user in a game

"Gaming is the most expansive category in the entertainment industry, as people everywhere turn to gaming to connect, socialize and play with their friends,"
says Satya Nadella, Microsoft CEO

Follow us on LinkedIn

Netflix Live Stream

Feature 03:

Live Stream: In the Netflix home page, live stream can be shown as stories on the top.

It could be livestream or short videos of current events. The events can be sports, news, concerts, etc.

This can be done in a pilot phase by tie-ups with sports channels to have live sports broadcasted on Netflix for the sports lovers.

Insight:

Providing entertainment in different forms

User Value Proposition:

Engagement with users who wants a short break from the busy schedule

Success Metrics:

- Average no. of user views for a livestream
- No. of livestream views by a user
- View rate
- Time spent by a user on a livestream

Netflix Preview

Feature 04:

Preview: Users can view the trailers in the home page before subscribing to the platform.

The user can view 30 minutes of the first episode of the popular 3 shows.

Insight:

Free glimpse of the show can instill curiosity to watch further

User Value Proposition:

User gets an idea of what they are subscribing for

Success Metrics:

- No. of new subscriptions
- View rate
- User session duration

OTT | Entertainment Industry | Business

Netflix plans to dominate entertainment industry

Netflix, the OTT content platform and production company is venturing into other segments of entertainment industry including the gaming and live streaming. This move is inline with its mission to entertain the world.

The company is all set to launch its *Netflix theatre* to provide the users the opportunity to watch shows with their dear and near ones. The platform lets the user create room to enable live conversation.

Netflix is venturing into other forms of entertainment and launching a new *Netflix Games* category to remove user boredom and allows more engagement. Not just that, there is a *Live Stream* of current events and happenings. Netflix is making a major makeover with *Netflix Preview* by enabling the new users to get a glimpse of the platform before subscribing to it. The OTT platform is all set to entertain the whole world in different forms and be the leader in the entire entertainment industry.

9. Google Pay Case Study by PM School

You have been on-boarded as the SVP of Product Management at Google. On the very first day, you get a mail from the CEO -

> *Hi there,*
>
> *For the Quarter ending Mar '21, our focus is going to be on improving Google Pay. An ongoing concern which is hurting our users is the case of failed transactions. Our Play Store ratings are going down. Even though we don't control the banking system, we need to come up with solutions to at least alleviate the pain a user goes through when a transaction is not successful.*
>
> *Also, apart from the above, what else can we do to improve the user experience?*
>
> *Awaiting a plan of action by the coming weekend.*
>
> *Regards*
> *CEO, Google*

As the SVP, your task is to come up with a plan which is actionable. Come up with :-

- What all solutions/features/services will you build to solve for the above problems? *(At least 3)*
  - Please mention the success metrics as well for each
- Wireframes *(Balsamiq/Figma wireframes preferred)*
- Press-release announcing the launch of the solutions/features/services

Follow us on LinkedIn

Solution by

Sanika Oke

Problem Statement: To come up with solutions to alleviate the pain a user goes through when a transaction fails on Google Pay and to find ways to improve user experience.

About Gpay

GPay is a digital wallet platform and online payment system developed by Google to power in-app and tap-to-pay purchases on mobile devices, enabling users to make payments with phones.

Competitors

Goal: Identify features that can help alleviate user's pain after a transaction fails thereby improving the overall user experience and devising a press release announcing the launch of the solutions/features.

Solution 1: “GPay Wallet”

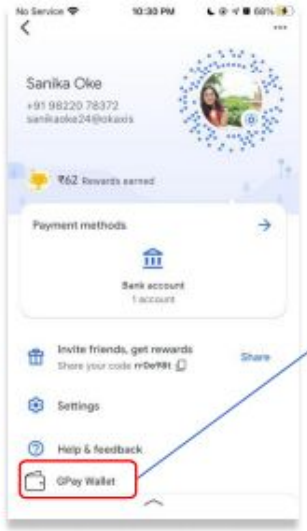

(Most optimum)

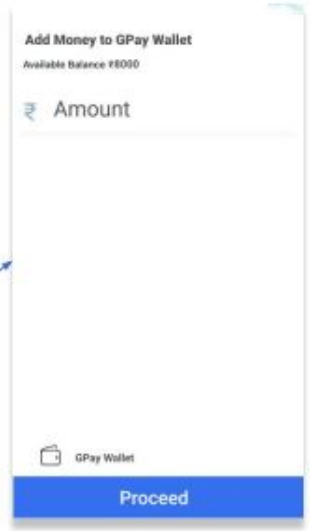

- User can add money to Gpay wallet through credit/debit card (Gpay can decide the limit of this amount)
- When user undergoes failed transaction on Gpay, Gpay pays the amount ‘x’ (Gpay decides the limit of this amount) to the receiver.
- Gpay then charges this amount ‘x’ to the sender and sends a notification accordingly.
- Gpay can directly withdraw this amount without user’s consent from user’s Gpay wallet.
- Gpay notifies user of debiting the amount from his account.

Restriction: Transaction amount should always be less than the amount in Gpay wallet else Gpay shouldn’t transfer money to receiver.

Success metrics :

- Acquisition
- Number of clicks on Gpay wallet.
- Number of users who transfer money to Gpay wallet.

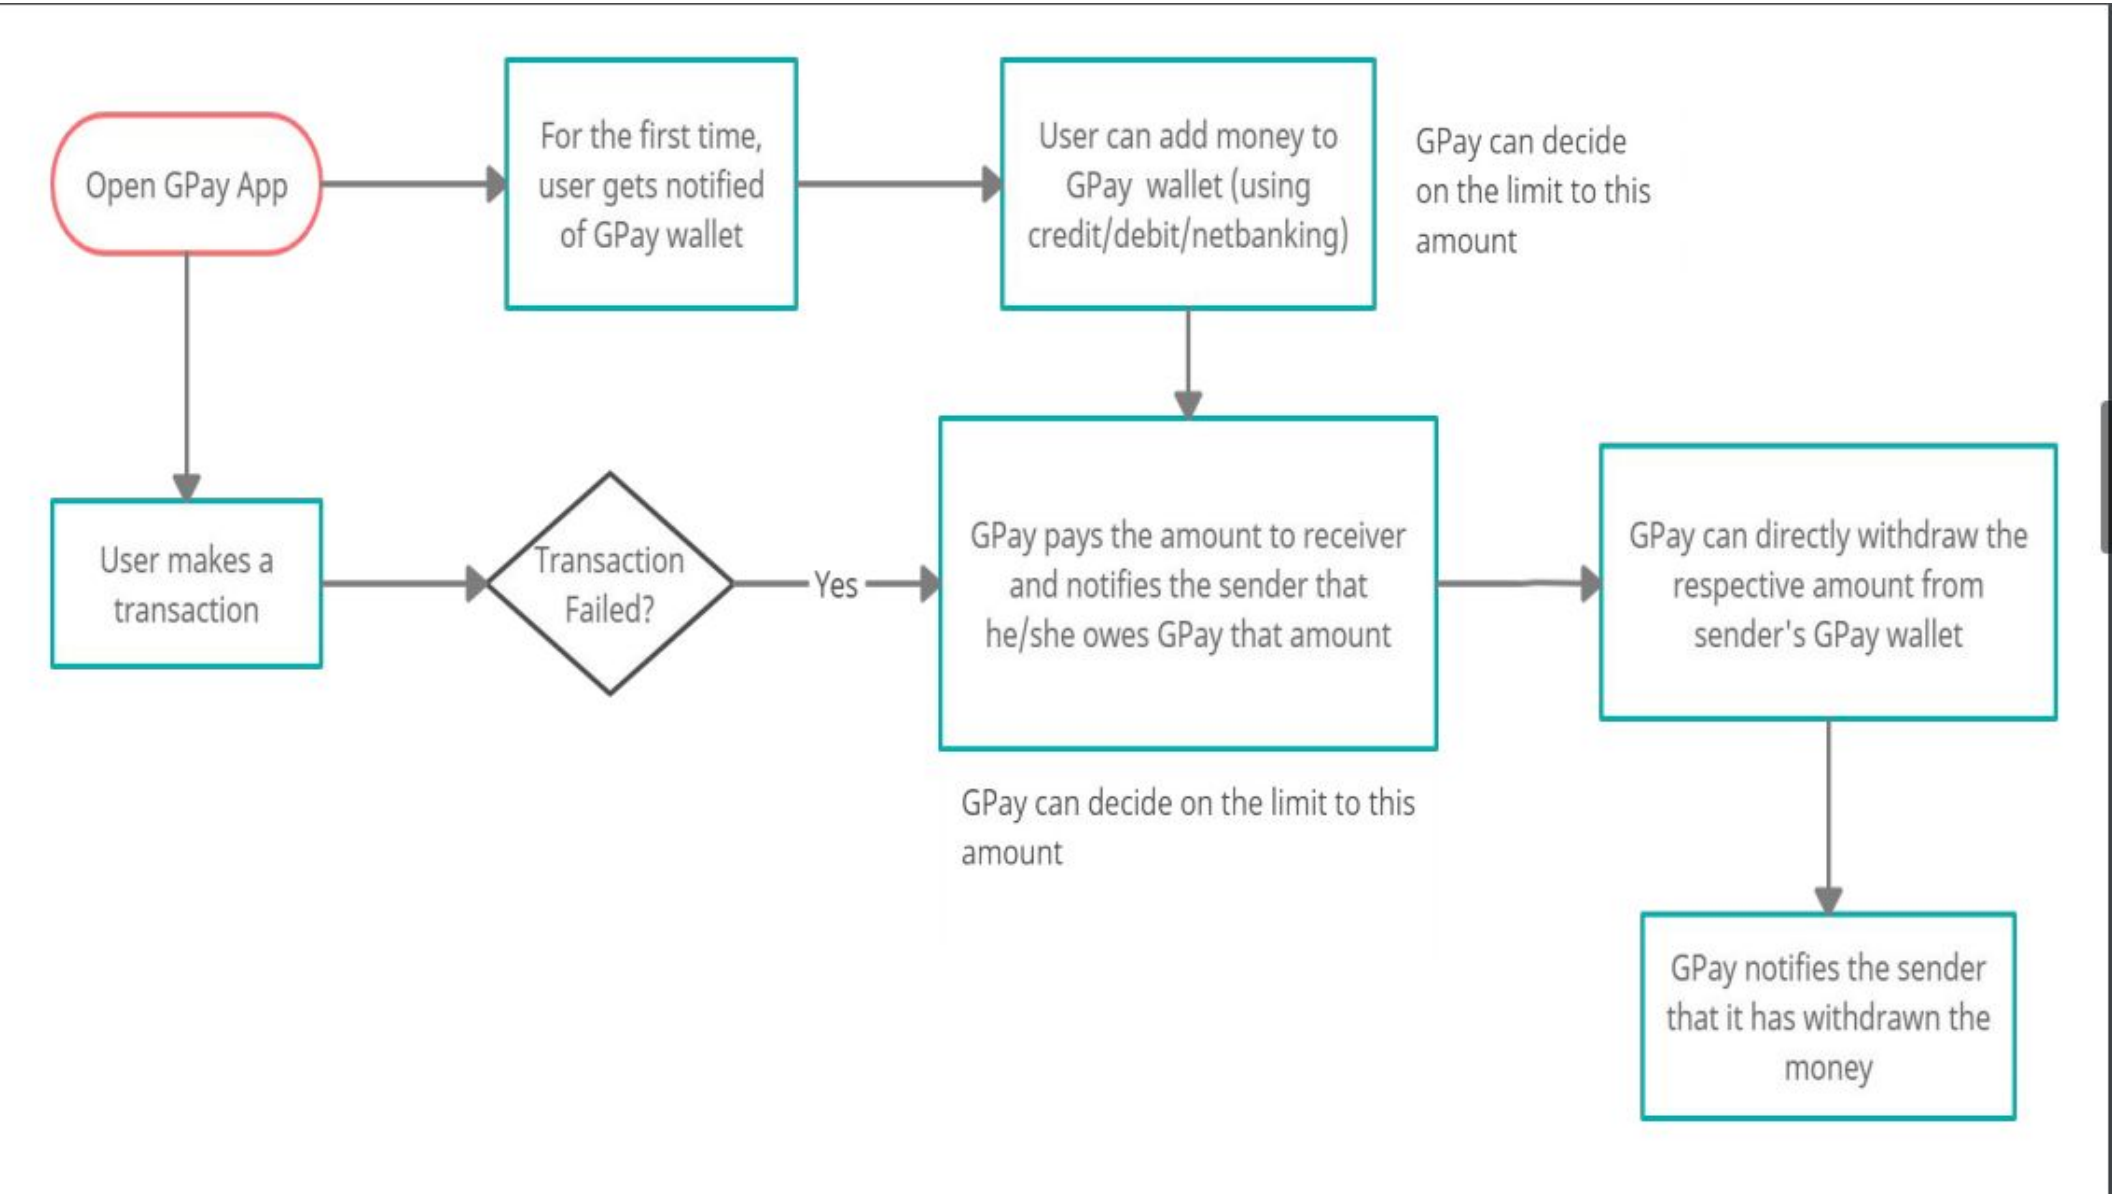

Follow us on LinkedIn

Follow us on LinkedIn

Solution 2: “Premium Feature”

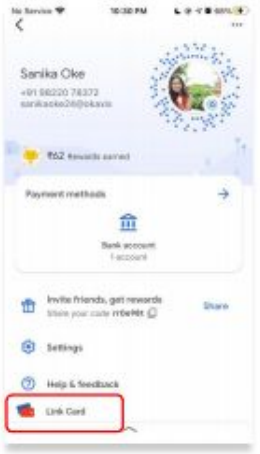

(Not a paid feature)

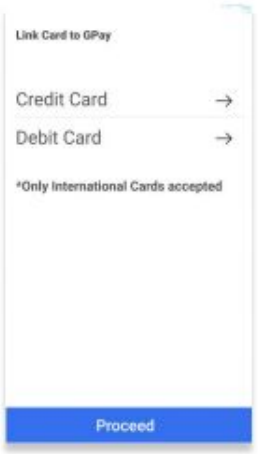

- User can link his debit/credit card (**only international cards)** to Gpay.
- When user undergoes failed transaction on Gpay, Gpay pays the amount ‘x’ (Gpay decides the limit of this amount) to the receiver.
- Gpay then charges this amount ‘x’ to the sender.
- Gpay can debit that amount from the registered card without user’s consent.
- Gpay notifies user of debiting the amount from his account.

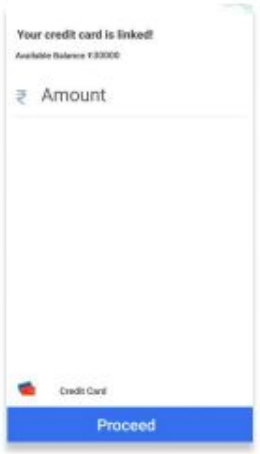

Restriction: The credit/debit card should be international. Not applicable to other credit cards.

Success metrics :

- Retention.
- Addition of global card users.

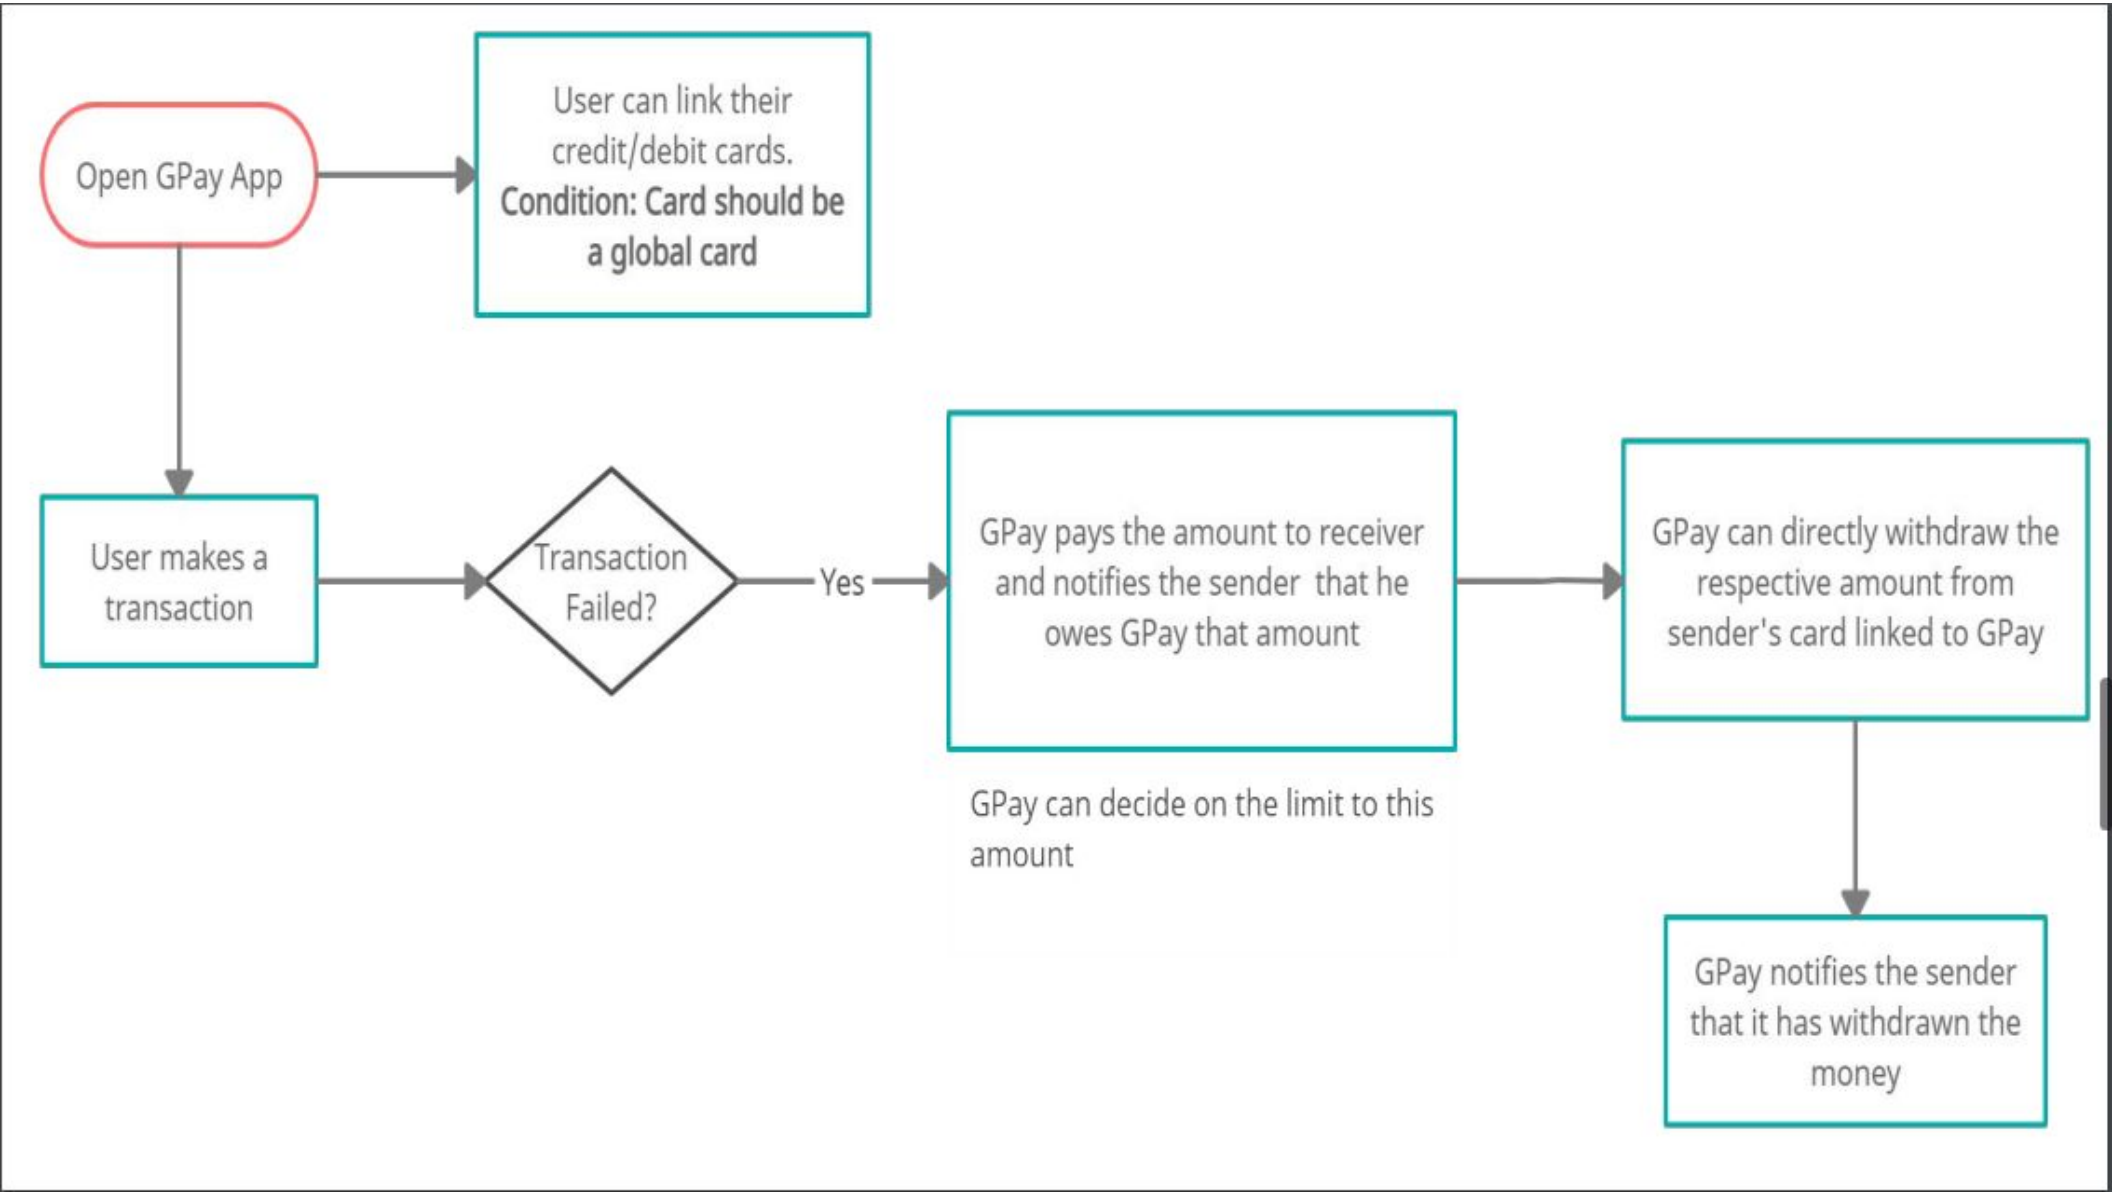

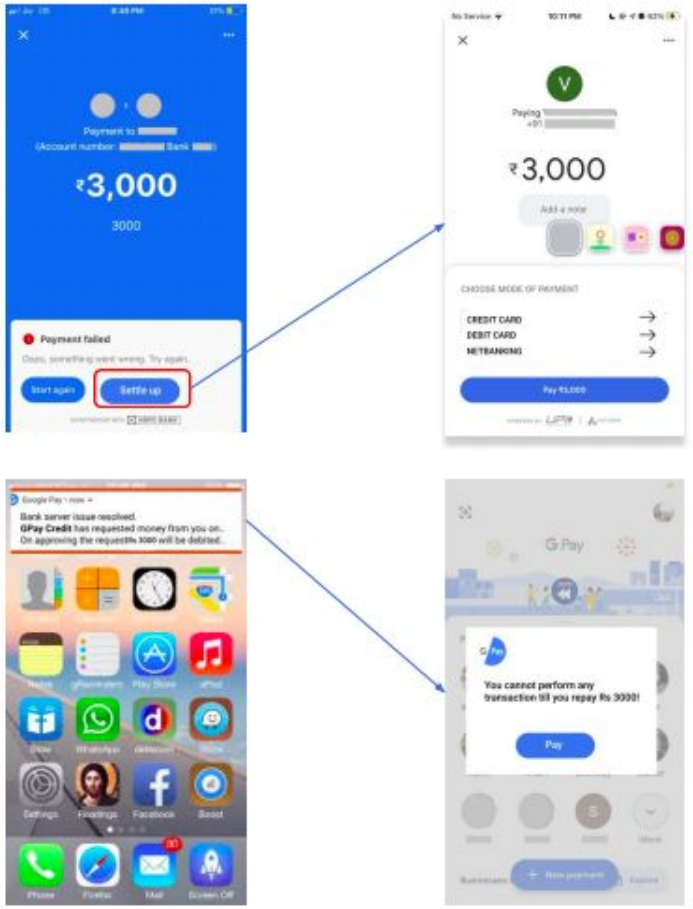

Follow us on LinkedIn

Follow us on LinkedIn

Solution 3: “Settle up to make another transaction” (Least optimum)

- When user undergoes failed transaction on Gpay, Gpay pays the amount ‘x’ (Gpay decides the limit of this amount) to the receiver.
- Gpay then charges this amount ‘x’ to the sender.
- Sender can pay this amount to Gpay with credit/debit/netbanking.
- The sender can’t perform any other transaction till he doesn’t settle up with Gpay.

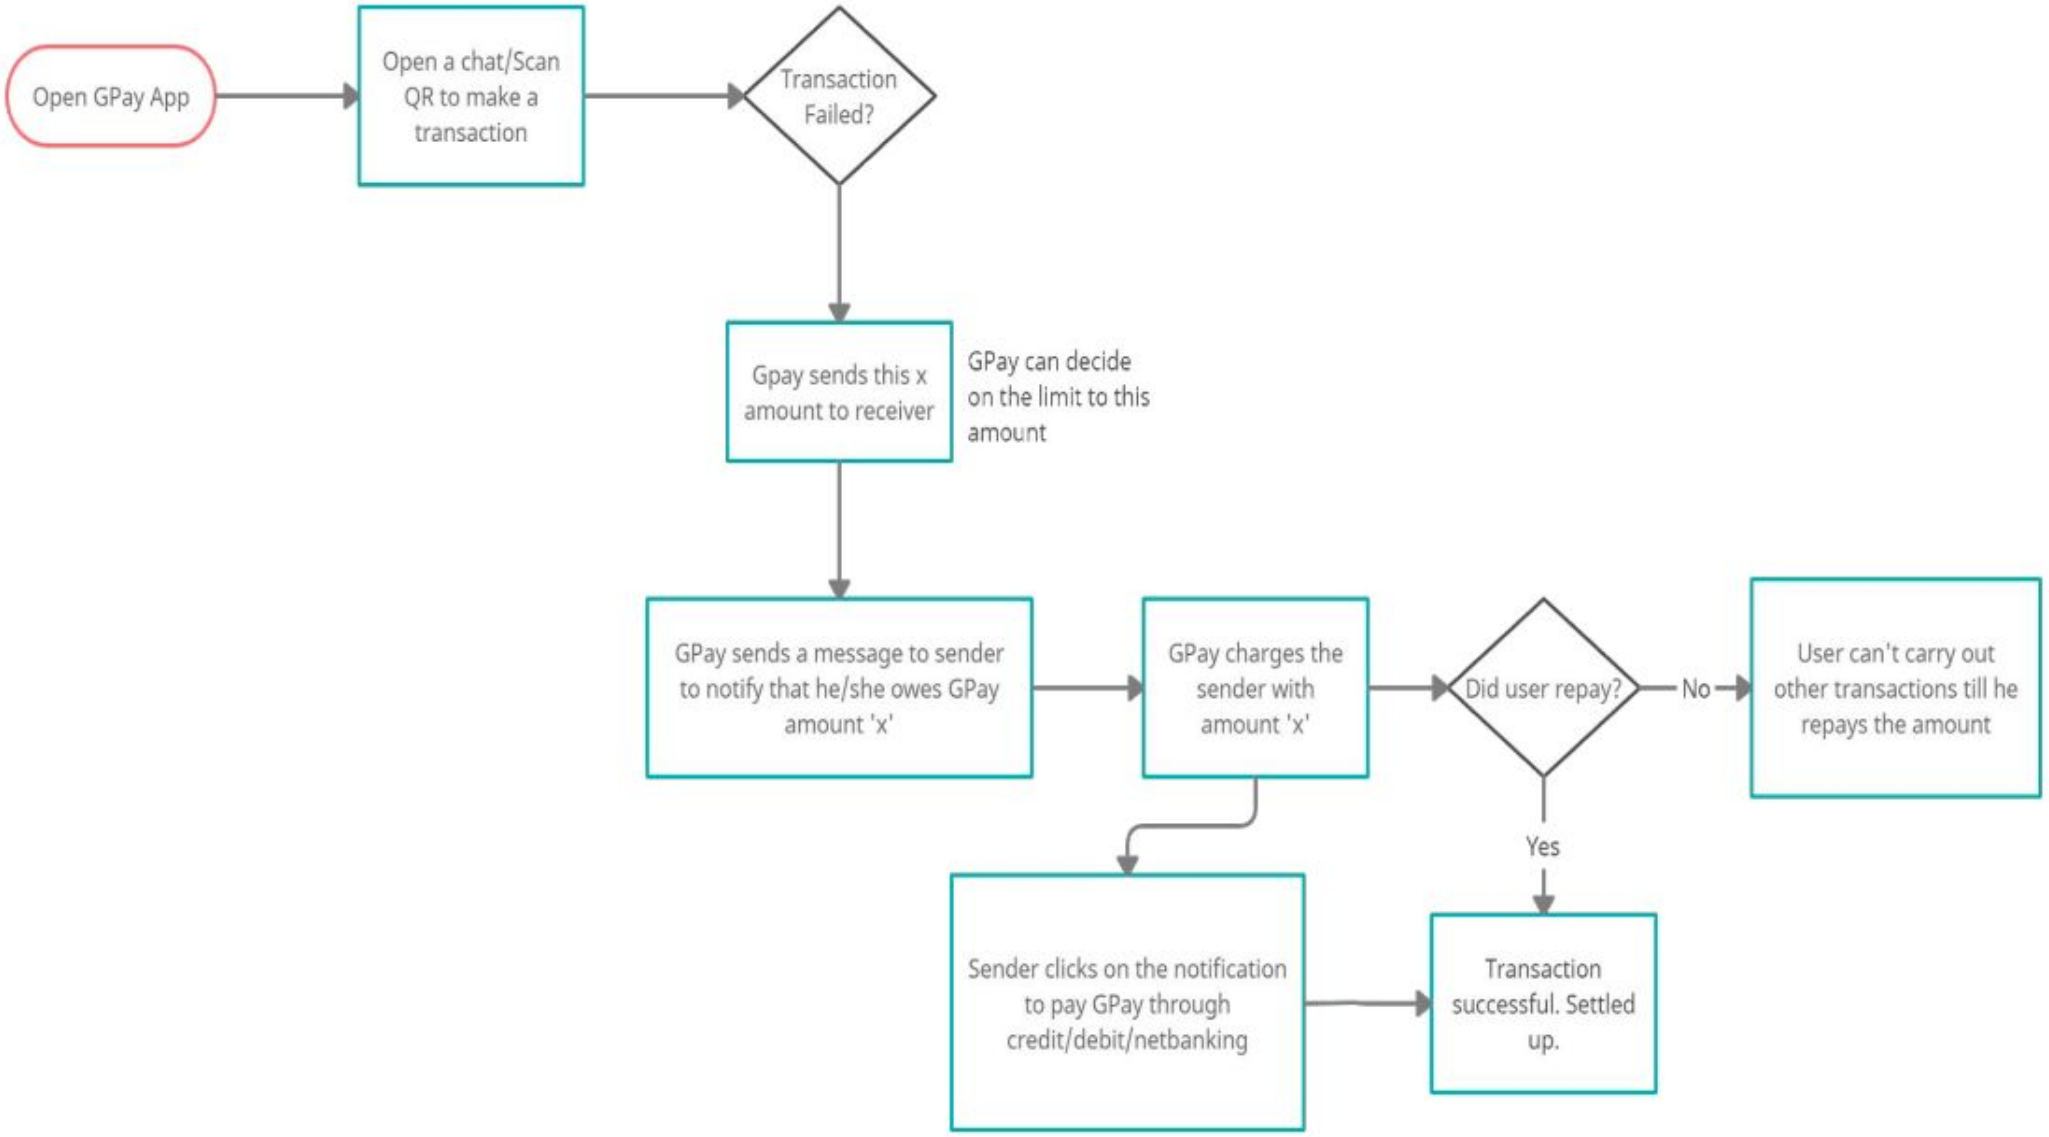

Drawbacks:

- Sender won’t repay and will uninstall his/her Gpay app.
- Google Pay will remain in debt

Success metrics :

- Retention
- Number of Uninstalls
- Number of users who pay back

10. Groww APM Campus Hiring Case at IIT Guwahati

Whatsapp is one of the most used products in India. Can you design a product that enables people to buy stocks or mutual funds on Whatsapp?

Few pointers on the case study but feel free to use your own framework

- What is the problem you are trying to solve?
- What is the size of the problem?
- How will be the user journey?
- What are your success metrics?
- GTM plan?

Follow us on LinkedIn

Solution by

Ashish Sonavane

Defining the problem

Problem Statement

Design a product that enables people to buy stocks or mutual funds(MFs) on WhatsApp.

Goal

To build a platform that enables everyone to easily trade **stocks** without using complicated apps and thus, to minimise the physical effort and time consumed in trading.(Stocks are prioritised over MFs simply because facilitating easy trading would consequently improve revenue aspects)

Clarifications

Why is WhatsApp a suitable platform to enable people to trade?

- 400 Million MAU by 2019 (highest penetration in India).
- Easy to use, self-explanatory interface and low network requirements.
- End-to-end encryption which strengthens the trust of users.
- Free to use, ads free and exclusive for messaging.

How is the proposition of buying stocks delivered?

The investor shall be connected with the broker company through WhatsApp where all the instructions by the investor would be messaged. The broker would then be responsible to execute the instructions delivered over WhatsApp on behalf of the user.

Which is the most impactful user segment to prioritise?

More transactions would lead to higher revenue through brokerage. As a result, on a broader sense, more focus would be given on stock traders. Expert investors use mature tools for advanced stock analysis and thus these investors are not prioritized. **The target user segment would hence comprise of beginner and intermediate level intraday & short term traders along with audience without any trading experience.**

The data suggests that high brokerage could be earned on equity trades and retail investors still form a miniscule part of Indian population.

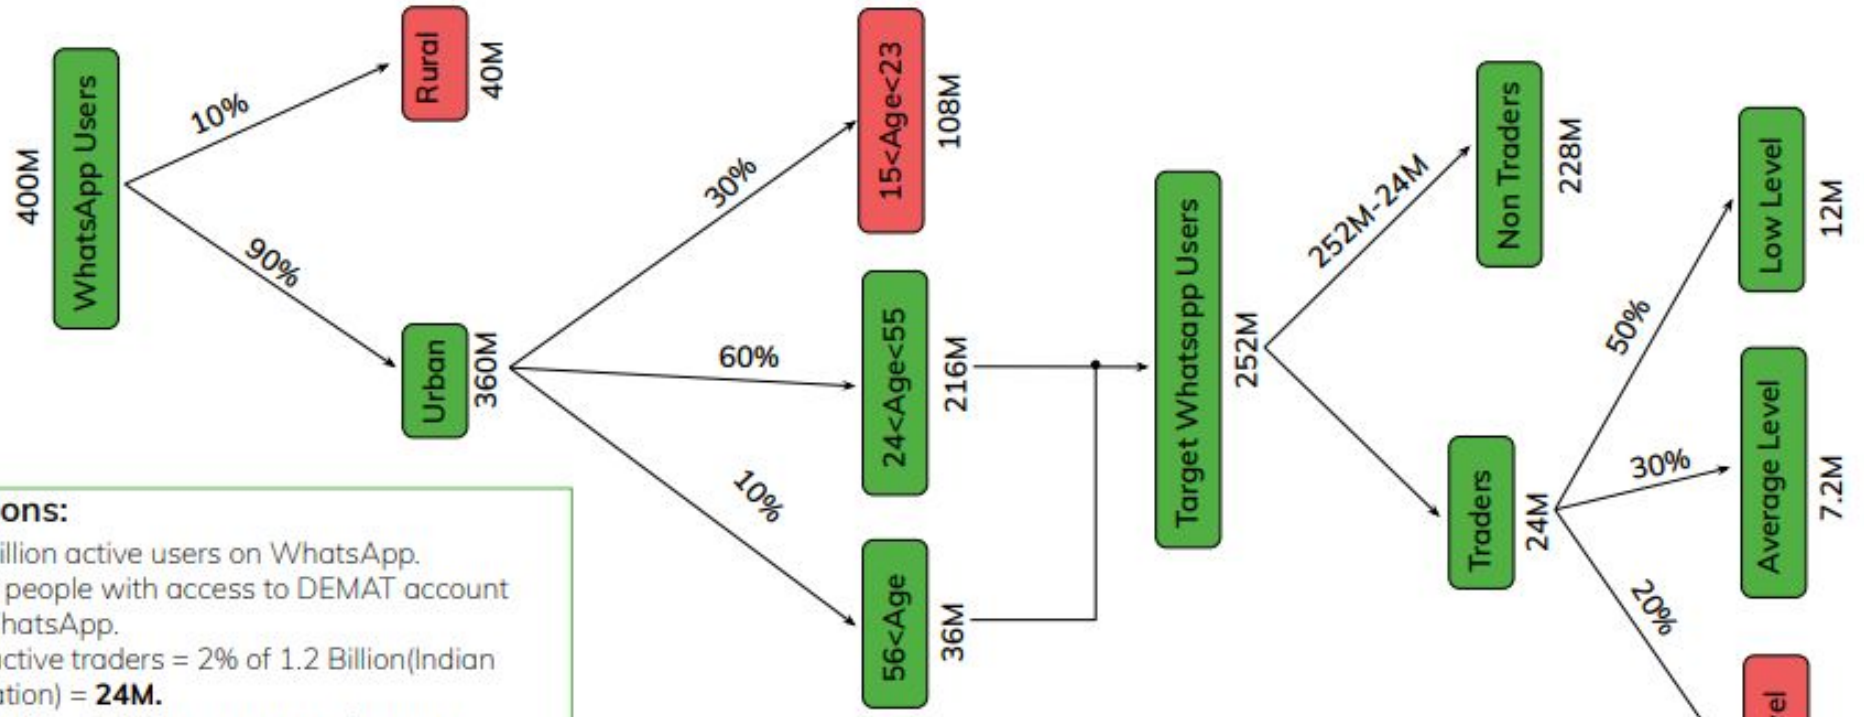

No. of trades(in lakh) in 2018-19 on NSE India. 24,914

Revenue(in ₹) of top 8 brokerage firms in India 2019. 60.4B

Percentage(indian population) of retail investors in Stock Market. 2%

Follow us on LinkedIn

Potential Market Size Estimation

Assumptions:

- 400 Million active users on WhatsApp.
- All the people with access to DEMAT account use WhatsApp.
- Total active traders = 2% of 1.2 Billion(Indian Population) = **24M.**
- 80-20 rule to estimate amount of expert, average and low level traders.
- Very low awareness about stock markets in rural areas and less touchpoints.
- Old people who use Whatsapp can learn trading easily and non-traders (since old people with trading experience are negligible).

The total potential market = 228M(non-traders)+7.2M(average traders)+12M(low level traders) = **247.2M**

Follow us on LinkedIn

User Personas of Target Segment

Mr. Gaurav Khemka

A **beginner** with low experience in trading. **27 years old** and an engineer by profession.

"Everytime I think about buying some shares, it's either my indecisiveness or my hectic schedule that keeps me at bay."

Fast Learner | Aggressive | Hard worker | Analytical

Goals:

- Invest to grow money faster and with calculated risk vs reward.
- Learn about investing and personal finance quickly.
- Satisfy short term monetary needs on account of travelling, eating out, buying items online, etc.

Frustrations:

- Selecting stocks from around two thousand listed companies is time consuming.
- High confusion on account of the information overflow on TV, internet, etc. regarding financial instruments.
- Less time to put into analysis and setting up trade(choosing stop-loss, target price, trigger, etc.)

Mr. Sandeep Bichare

An **intermediate** level investor with average knowledge of trading. **48 years old** and a senior manager by profession.

"Even though I am bullish on my favourite shares, I wonder what tips my colleagues would have about today's market. Maybe I should watch a CNBC video on Youtube."

Likes Finance | Prefers Safety | Logical | Thoughtful

Goals:

- Buy shares with more conviction and improve trade success.
- Complete the day with more profits than losses and compensate for small/medium daily expenses.
- Invest in a long term portfolio made with good fundamental analysis to grow wealth steadily without much risk.

Frustrations:

- Cannot maintain long term investments because of fluctuations in market or frequent requirement of funds.
- Less time to put into analysis and setting up trade(choosing stop-loss, target price, trigger, etc.)
- Keeping a track of investments in multiple financial instruments is effortful.

Follow us on LinkedIn

More User Personas

Mr. Rabhaji Bichare

A retired government official with just basic understanding of the stock market but no hands-on experience and **67 years old.**

"Now that I have a lot of free time, maybe I can put it to good use by earning some money and helping my children in whatever way possible."

Patience | Intelligent | Optimist | Resilient

Goals:

- Learn about trading quickly and easily in a well-defined manner.
- Discuss with acquaintances efficiently.
- Satisfy short term monetary needs like household requirements, eating out, buying gifts, etc.

Frustrations:

- Getting adjusted to trading methods, concepts, etc. could take some time in the beginning.
- Difficult to focus for longer durations of time.
- Lack of conviction while purchasing stocks because of fear of losses.
- Documentation for starting a DEMAT account is time consuming and effortful.

Ms. Sneha Deka

An individual without any experience in trading. **32 years old** and a product designer by profession.

"Trading on stock markets seems very complicated and given the associated risk, I don't think trading is for me."

Creative | Structured Thinker | Fast learner | Realist

Goals:

- Satisfy short term monetary needs on account of travelling, eating out, buying items online, etc.
- Learn about trading quickly and easily in a well-defined manner.
- Practice as much times as possible without much time consumption and physical effort.

Frustrations:

- High confusion on account of the information overflow on TV, internet, etc. regarding financial instruments.
- Lack of conviction while purchasing stocks because of fear of losses.
- Dedicating time into trading is difficult because of busy schedule.
- Documentation for starting a DEMAT account is time consuming and effortful.

Competitor Analysis (HDFC Securities)

Select invest option and search for hdfc bank

Select buy and set up trade parameters

Check the trade summary for modifications

The panel provides one tap access to all basic use cases. However, the bot fails to recognise requests apart from these that are listed.

The bot only detects stored values **(hdfc bank vs hdfcbank)**which creates confusion. Basic information about the stock and related companies makes understanding easier.

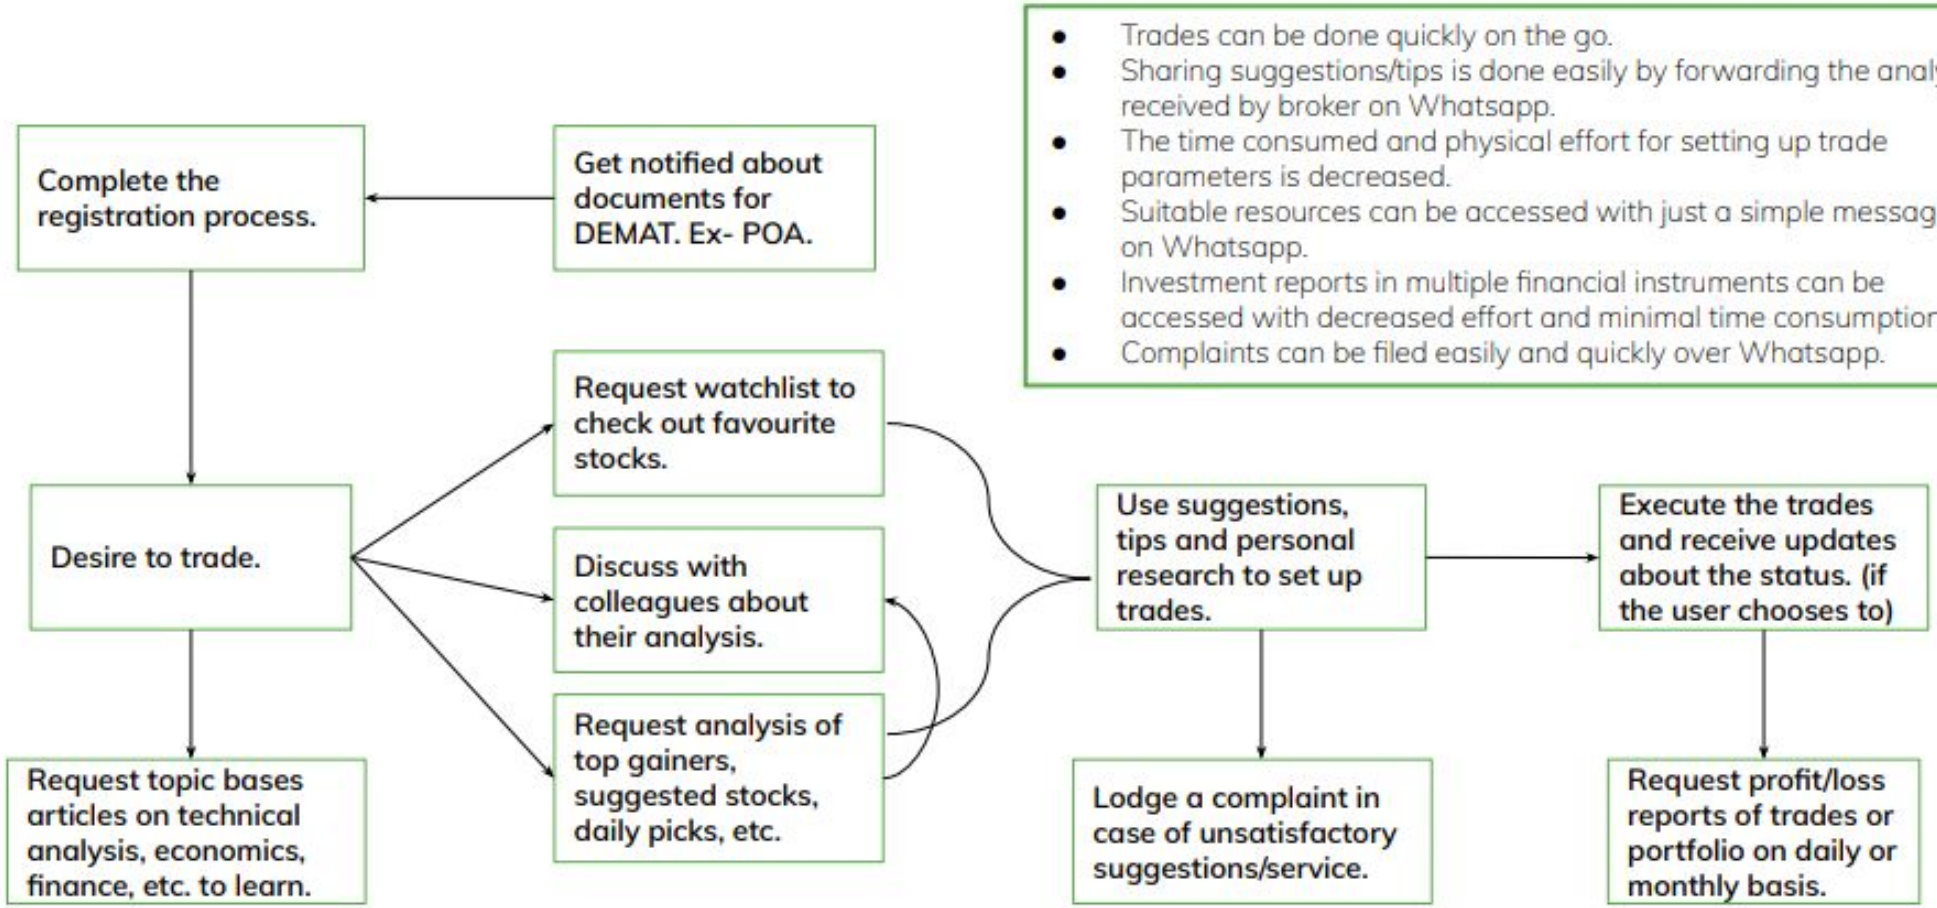

In order to set-up the trade, the bot asks for more information about exchange, quantity, buying price. This does not serve sophisticated methods like stop loss, traiggers, etc.

The bot finally summaries before asking for final call and also allows for modification of the buy order.

Conclusion: The basic propositions are satisfied by the bot but the operation requires website/phone app. The bot however can only comprehend requests made in a certain protocol and fails to provide valid results otherwise. More mature trade parameters cannot be set and comparison among stocks using ratio analysis, chart analysis etc. is not possible.

User Journey Skeleton

Follow us on LinkedIn

Wireframes of Implementation

Use case of a new user without existing DEMAT account

A user is initially nudged to check whether he/she has an existing DEMAT account.

The user is asked to keep required documents ready to make the process simple

The user is asked to upload documents one by one which are recorded for filling POA.

In order to apply for DEMAT

If the user delays application

The algorithm can satisfy simple requests without having to have a DEMAT account to engage the user.

The algorithm identifies the topic using Natural Language Processing and provides relevant links online.

Defining Go To Market Strategy

Objectives

- Faster user acquisition with excellent onboarding experience.
- Awareness of investing and the product.
- Reiteration for developing user experience.
- Faster time to value.

Target Market

The target segment constitutes traders with low knowledge(**Gaurav**), traders with intermediate knowledge(**Sandeep**), non-traders(**Sneha**) and Old people(**Rabhaji**).

Clarifications

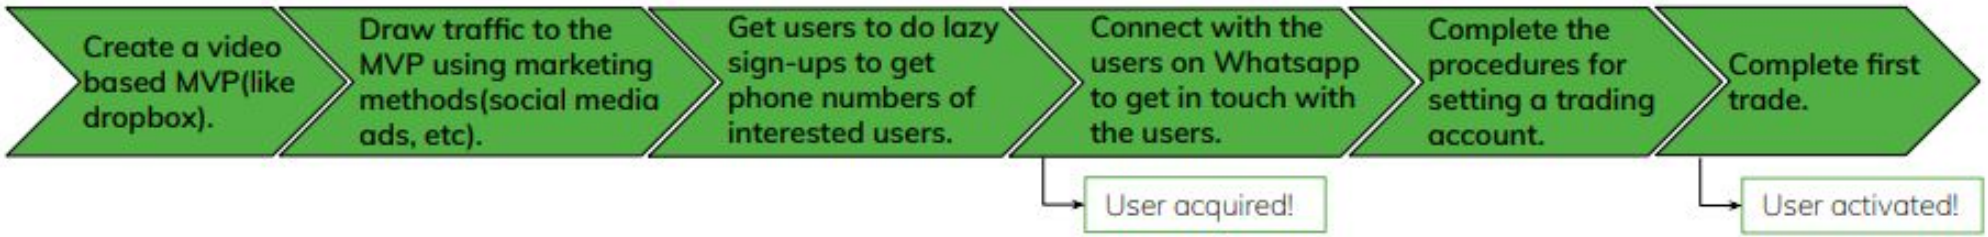

What is the current scenario of the product?

The product is being released from scratch. The Indian retail market is ready to be disrupted with just 2% of population into trading. Whatsapp is the most used messaging application in the market and thus, opens a possibility of enabling quick and easy trading on the go.

What is the vision for the product?

To make this the most sought after trading service and gather leading market share in the industry.

What is the plan of Acquisition?

Industry Analysis Using Porter's 5 Forces

Suppliers (companies)

1. Companies need to raise funds from stocks.

2. With new IPOs getting listed, more buyers are required.

Bargaining Power: Low

Customers (retail investors)

1. Multiple options available to choose from.

2. Low product differentiation in terms of propositions offered.

Bargaining Power: High

Substitutes

1. Various financial instruments like MFs, PFs, etc.

2. Multiple broking options available in equity markets as well.

Substitution Threat: Moderate

New Entrants

1. Increasing entry of foreign banks in Indian retail market.

2. Moderate barriers to entry but a highly potential market.

New Entrants Threat: High

Competitiveness

1. Minimal difference in market share among products.

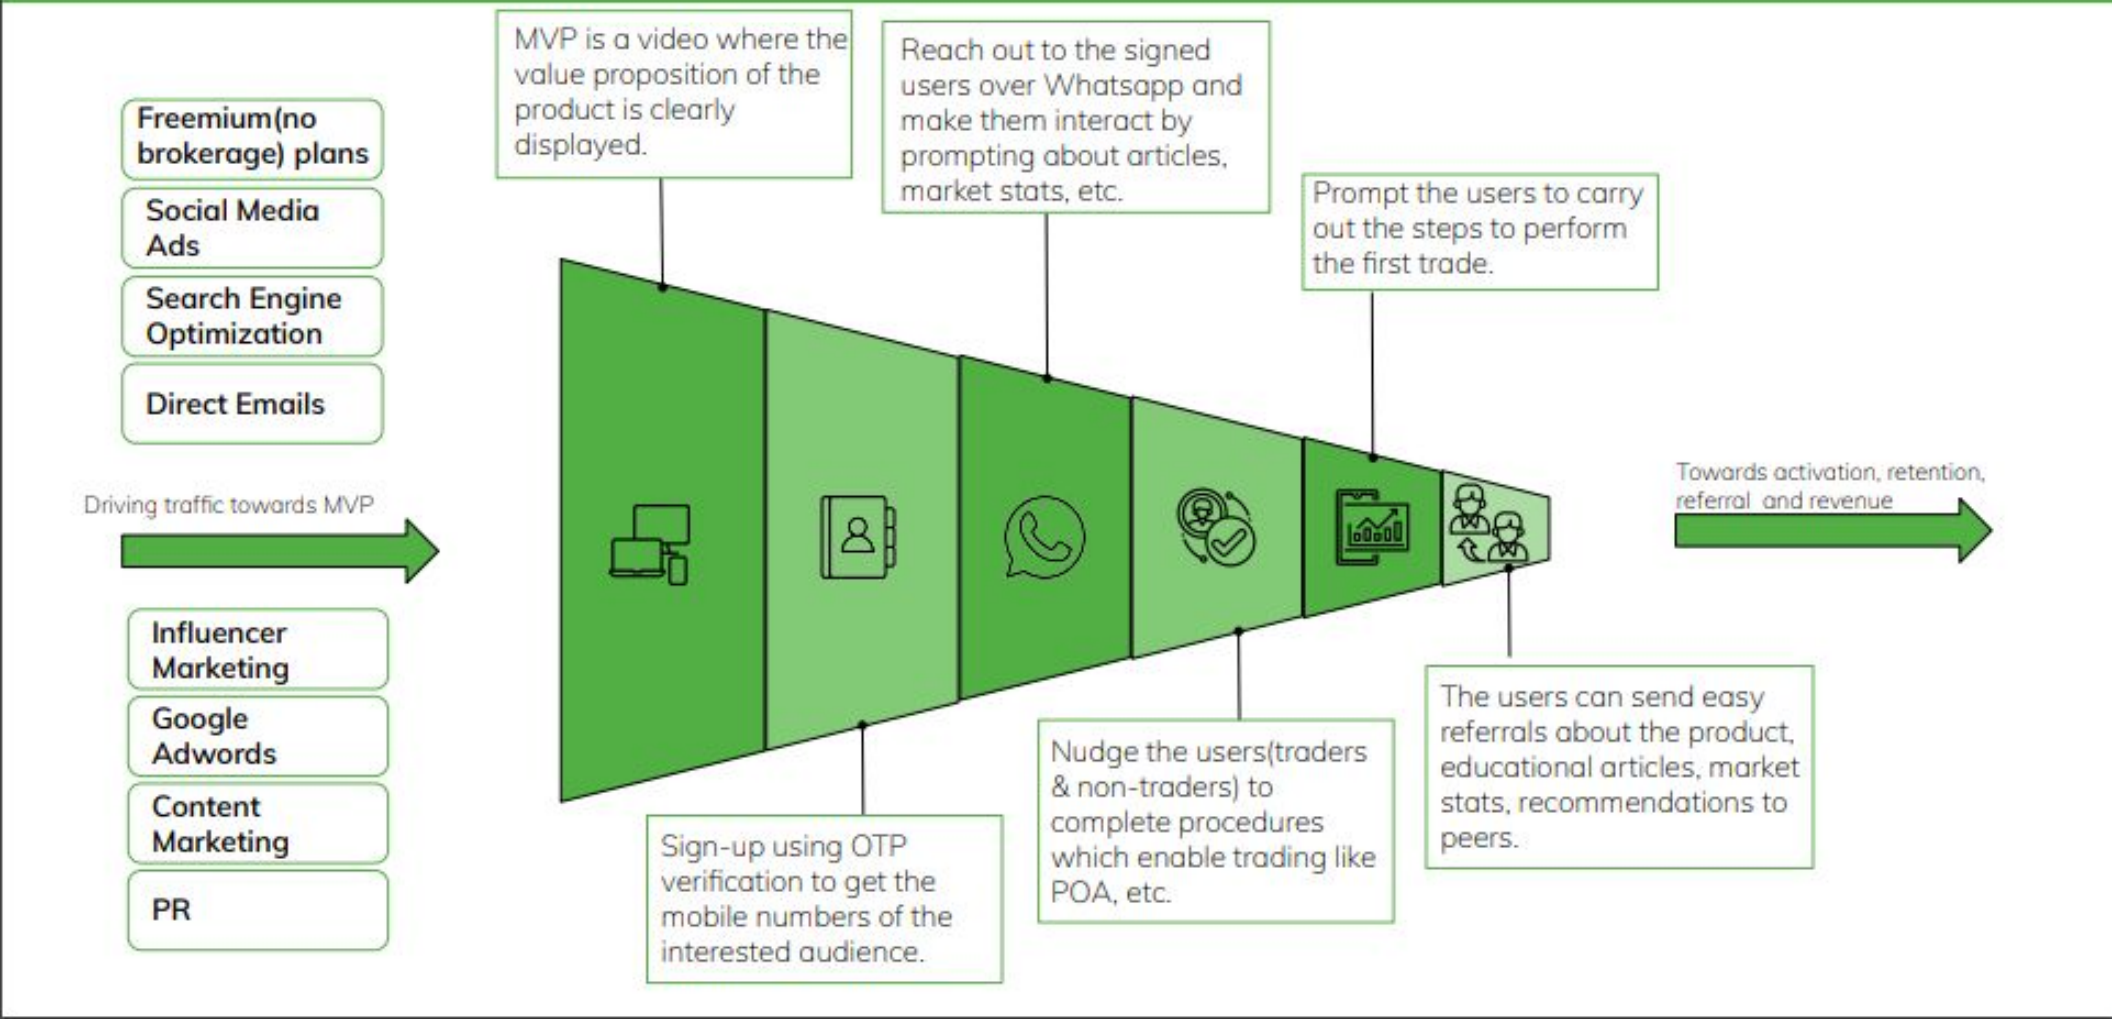

2. Every player trying to keep as low brokerage as possible.

Intra-industry rivalry: High

Conclusion: The industry is highly competitive and is continuously infused with Indian as well as foreign players. However, majority of the Indian market is untapped causing an influx of many new entrants. Overall, the industry can be visualised as an increasing pie and thus, has huge potential.
