Swiggy Senior

PM School

Opportunity to capture ~3.9M elderly users by building an MVP version

33M Total addressable market

Urban population over 65 years of age and above poverty line

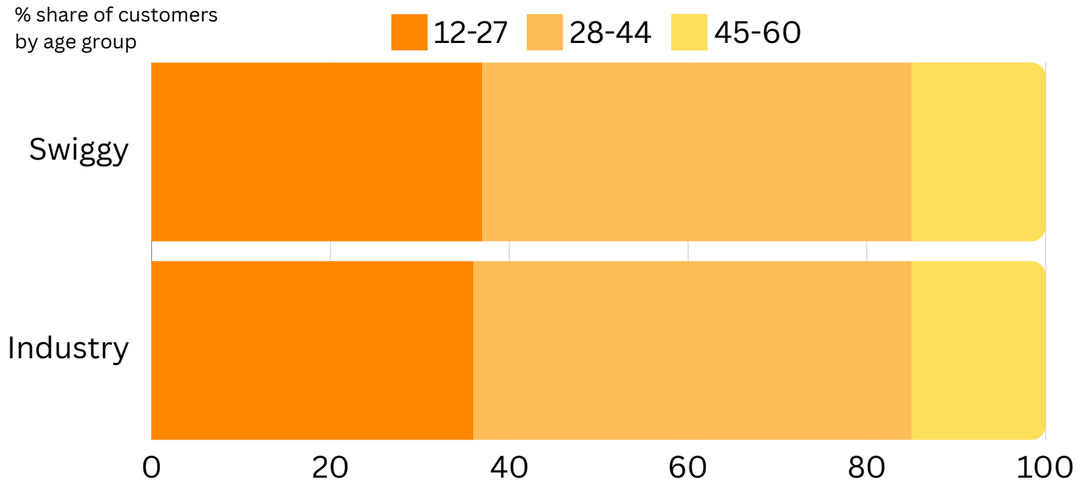

8.7M Service addressable market

Elderly population (urban & above poverty line) with access to internet and smartphone

3.9M Service obtainable market

Swiggy's market share out of serviceable market: ~45%

Negligible share of customers from the 65+ bucket of population despite modest digital penetration rates

Emerging trends driving the need for Swiggy Senior

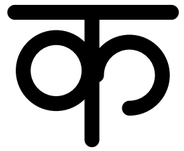

~20% of the population will be aged 60 and above by 2050, driven by increased life expectancy and declining birth rates

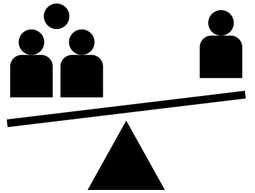

~20% CAGR in number of internet users in India between 2018-2023, showing significant digital penetration

Indian Language Internet User Base on the Rise

Indian language internet user base growing at 18% as compared to 3% for English

Expected to cover 75% of India's internet user base by 2028

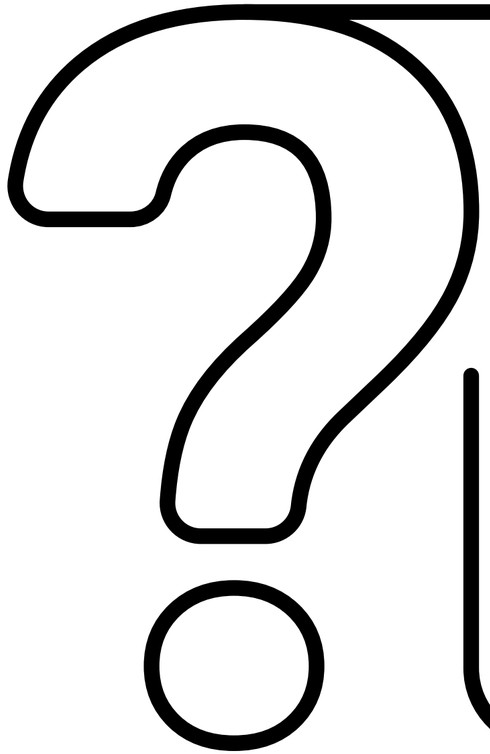

Problem statement:
Design Swiggy for the Elderly

Swiggy is an Indian **online food ordering** and delivery platform, operating in more than 500 Indian cities as of September 2021.

The platform also provides on-demand grocery deliveries under the name **Instamart**, and a same-day package delivery service called **Swiggy Genie**.

Monthly active users (MAU) stood at **20 million** as of 2022

Recorded **revenue of Rs 5,704.9 crores** in FY22.

Based on your user interactions with your user base especially the elderly users, you have realised that your platform does not cater to the needs of such users with ease. With confusing UI, thousands of options and a non-intuitive experience, elderly users face friction while placing orders.
You want to launch an MVP for Swiggy especially designed for elderly users.

Product features to be rolled out in the current app

Prioritisation of the features suggest

Balsamiq, Figma wireframe

What are the success metrics?

Market sizing/business opportunity/Monetization strategy

User Personas

Name: Rakesh Reddy
Age: 58 years
Location: Hyderabad
Health: Perfectly healthy

Wants

Convinient home delivery of food from a trustworthy service

Frustrations

- Cant understand the order flow on food delivery apps
- gets confused by all the apps

Name: Vimala Verma
Age: 63 years
Location: Gurugram
Health: Diabetes with high blood pressure

Wants

To access online food delivery in a language they understand (Hindi

Frustrations

- Can’t read english
- Cant find diabetic friendly food options easily
- Cant read small fonts

Name: Shankuntala Sharma
Age: 59 years
Location: Mumbai
Health: Limited mobility after knee surgery

Wants

To try new cuisines and restaurants suggested by her son

Frustrations

- Is afraid of online scams and payments
- Can’t always reach son while placing online delivery order

Order on Whatsapp

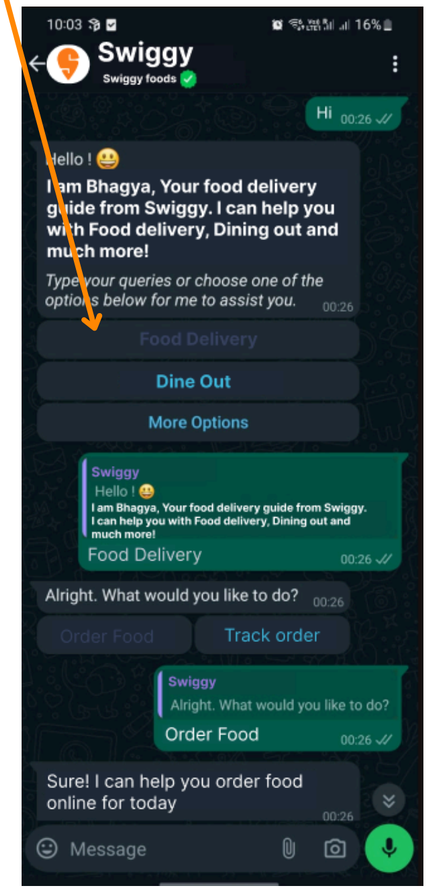

Pain point: Lack of trust on online products

Solution: Integration of a Whatsapp chatbot that conversationally receives the order from the user

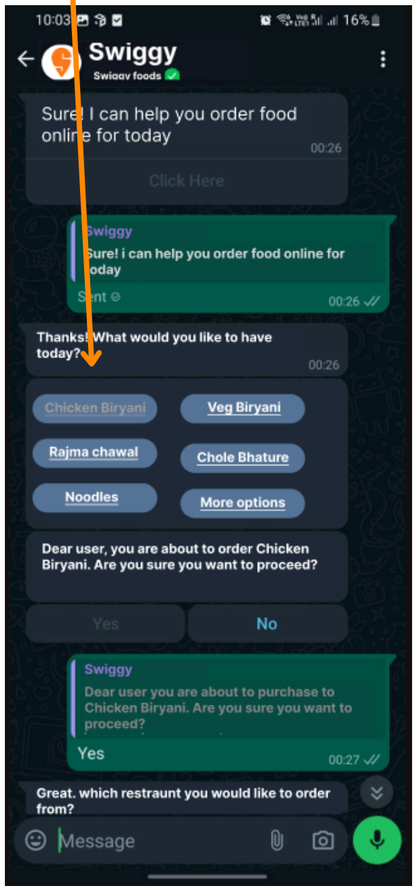

Salient features:

- This dissolves the need for establishing trust on a new app in the short term
- Establishes the Swiggy brand
- Eases users into online payments

1 **Choose Food Delivery or Dineout Reservation**

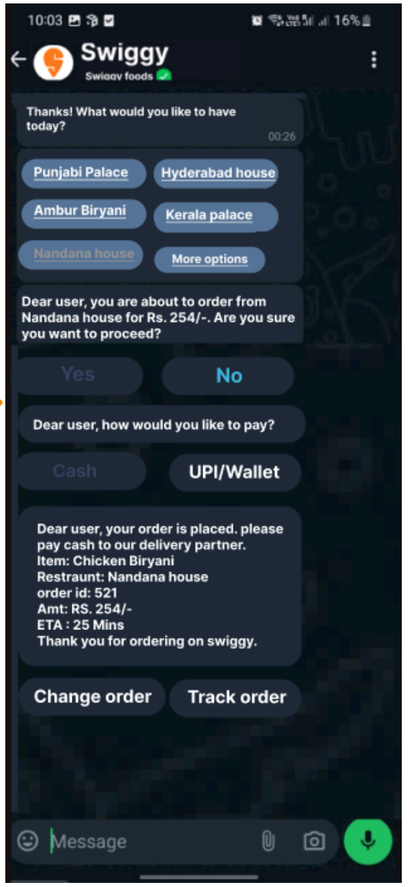

2 **Choose item from a curated list of popular items available across multiple restaurants**

3 **Select restaurant**

4 **Make payment**

Read Easy

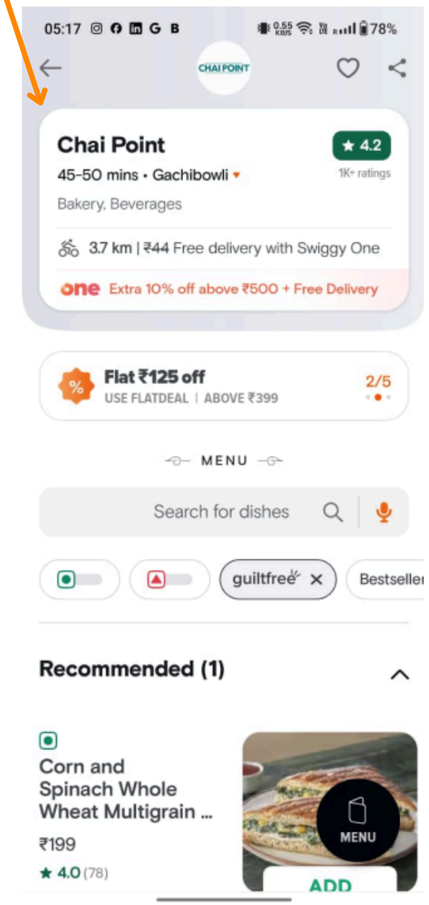

Pain points: Language barriers, information overload and lack of options addressing health concerns

Solution: Minimalistic information architecture localized for wider reach

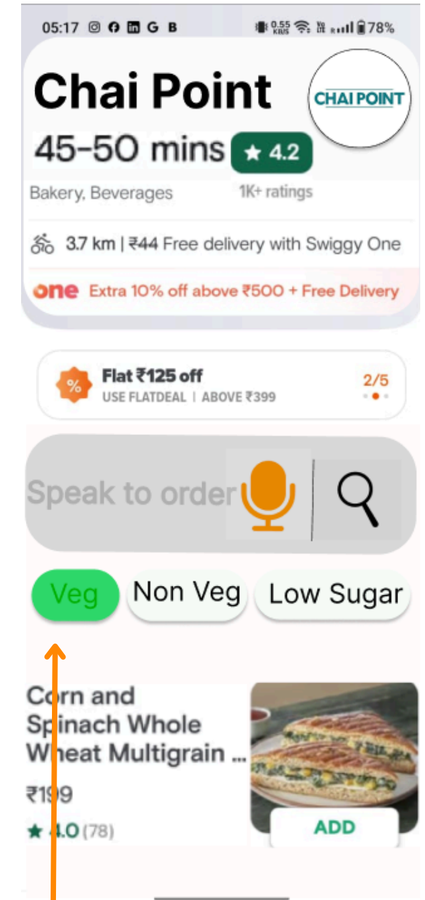

Salient Features:

- Support for vernacular languages
- Filter for health concerns
- Larger font sizes
- Omission of less important information

1 Current platform with less intuitive layout

2 Minimalistic design with preference of text over icons

3 Vernacular support with local languages

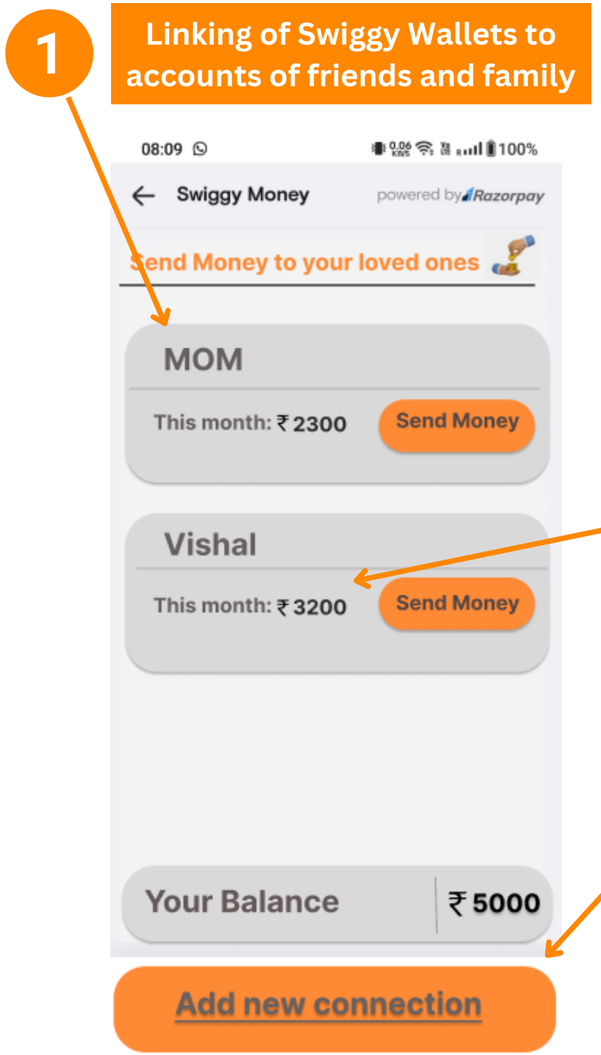

Pay for Family

Pain point: Lack of comfort with digital payments

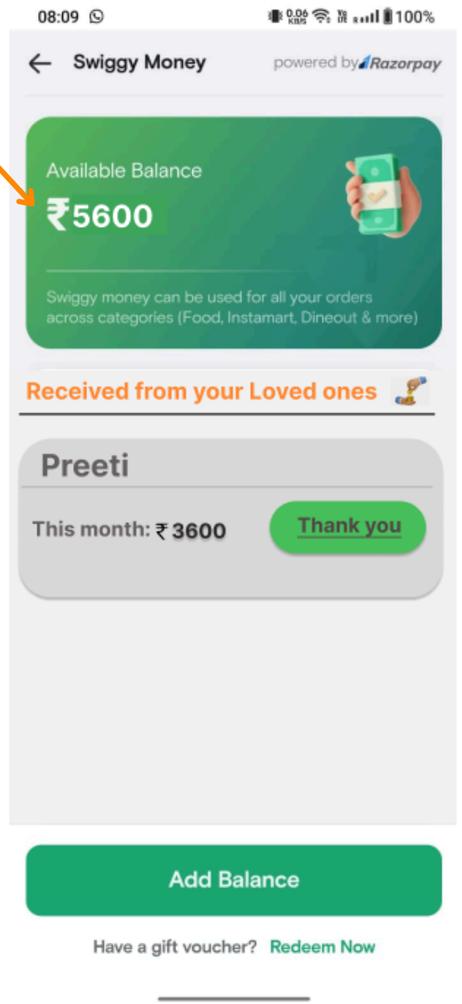

Solution: Enable loading of linked Swiggy wallets of family and friends

Salient Features:

- No need to contact others for make payments
- Removes need to enter own bank and card details online

Prioritization

RICE Framework

Features	Reach R	Impact I	Confidence C	Effort E	Score R*I*C/E	Rank
Order on whatsapp	5	4	4	2	40	1
Read easy	4	3	5	3	20	2
Pay for family	2	3	4	3	8	3

Metrics

App level

Overall

- Daily number of orders
- DAU, MAU
- Ordering users/DAU
- Orders WAU/MAU

Feature level

Order on whatsapp

- Conversion / DAU
- Response time
- order completion rate

Read Easy

- Vernacular language activation%
- Health filters adoption
- time taken to place order

Pay for family

- Payment drop off
- Linking adoption%
