WELLNESS WARRIOR

Healthy Vibes, Office Thrives!

Akshat Agrawal

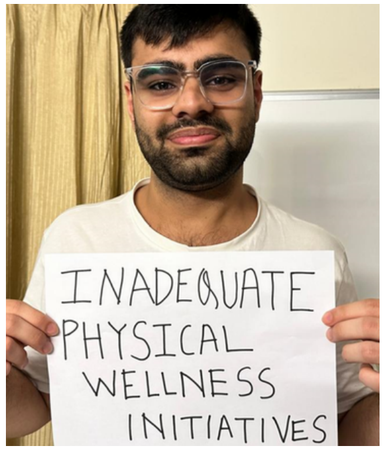

Divisha Seksaria

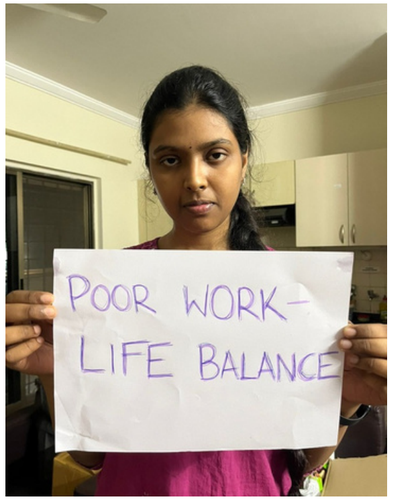

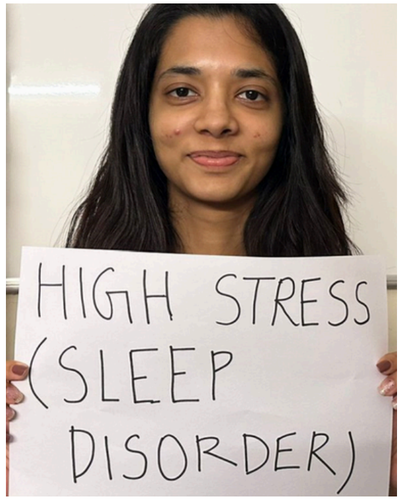

Sneha Singh

We surveyed several colleagues to identify their primary grievances at work

PROBLEM DEFINITION

Many employees are experiencing a decline in physical and mental health due to sedentary office environments, high stress levels, and poor work-life balance.

01

Increase Engagement: Utilize gamification, social connectivity, and personalized content to significantly boost employee participation in wellness activities.

02

Provide Personalized Solutions: Offer tailored wellness plans that address individual health goals and preferences, ensuring each employee receives relevant and effective support.

03

Demonstrate ROI: Implement robust tracking and analytics to measure the effectiveness of the wellness program and clearly demonstrate its return on investment to employers.

MARKET INSIGHTS

GLOBAL DIGITAL HEALTH MARKET

27.7% **CAGR**

MENTAL HEALTH SERVICES DEMAND

25% **SURGE SINCE COVID-19**

HOLISTIC WELLNESS PROGRAM SUCCESS

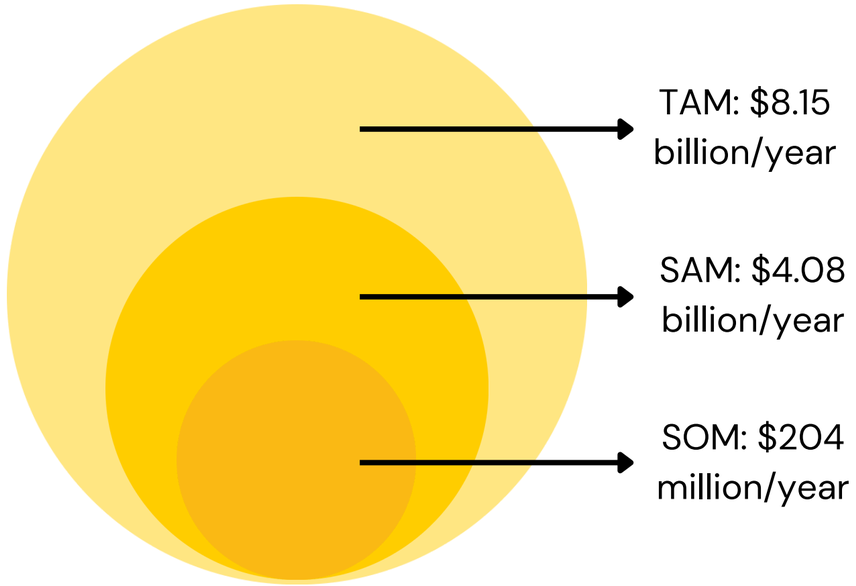

70% **HIGHER THAN FOCUSED APPROACH**

Industry Constraints:

Employee Benefit Research Institute: Average cost of $150 per employee per year.

PwC: 78% of consumers are concerned about health data privacy.

McKinsey: Diverse workforces have varying wellness needs.

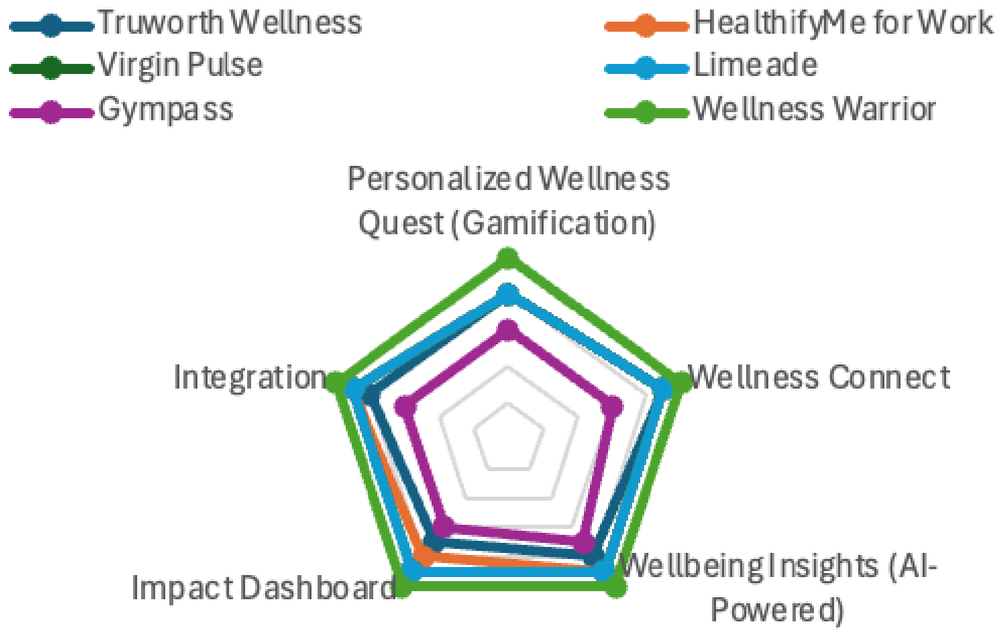

TAM: $8.15 billion/year

SAM: $4.08 billion/year

SOM: $204 million/year

COMPETITOR ANALYSIS

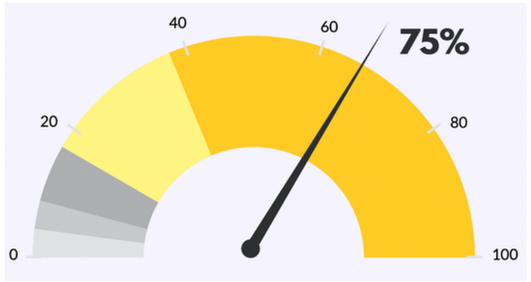

INFERENCE

- **Fragmented Wellness Platforms:** Incomplete holistic wellness solutions. Example: Calm for Business for mental health, Cultpass Corp for physical fitness & Plum for medical assistance.
- **Lack of Comprehensive Personalization:** Insufficient personalized wellness plans.
- **Limited Engaging Gamification:** Few engaging gamification elements.
- **Inadequate & non-customizable ROI Tracking:** Weak ROI measurement capabilities.

USER RESEARCH

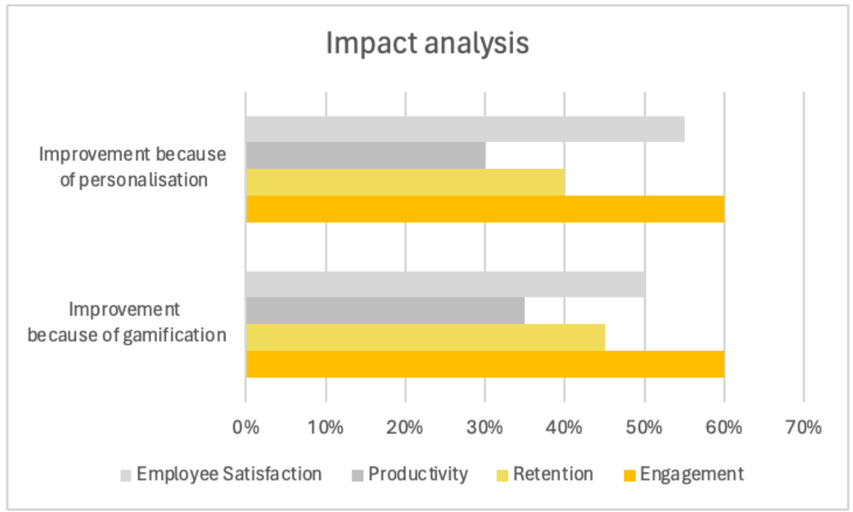

PRIMARY

Need for increase in social engagement in the workplace.

Results showed need for team challenges, group fitness challenges, social event, peer recognition programs, bi-weekly team building activities.

SECONDARY

Sources: Global Wellness Institute, Gallup, Deloitte insights, Journal of Occupational Health

USER PERSONAS

Name: Toby Flenderson
Age: 44
Occupation: HR Representative at Dunder Mifflin Paper Company
Location: Mumbai
Marital Status: Divorced
Technological Proficiency: Moderate

Challenges and Pain Points:

- Spends a lot of time solving employee issues which stem from their physical/mental health issues.
- Inability to gauge the ROI for wellness initiatives causing difficulty in deciding on new initiatives.
- Inability to get people on board for activities.

Goals:

- Increase Employee Wellbeing: Promote a healthier, more productive workforce.
- Improve Engagement: Develop strategies to keep employees engaged with the app.

Expectations:

- User-Friendly Technology: Prefers simple and intuitive solutions that do not add to his workload.
- Measurable Impact: Needs tools to measure the effectiveness of wellness programs and demonstrate ROI to justify the investment.

Name: Stanley Hudson
Age: 42
Occupation: Sales Representative at Dunder Mifflin Paper Company
Location: Mumbai
Marital Status: Married
Technological Proficiency: Moderate

Challenges and Pain Points:

- Health Concerns: Stanley has a sedentary lifestyle and needs to be more active to manage his weight and heart health.
- Lack of Connection: He does not feel connected with the team and wants to head home as soon as possible.
- Motivation: He often lacks motivation to start new wellness routines and stick to them.

Goals:

- Improve Physical Health: With concerns about weight and heart health,
- Enjoy Hobbies: Stanley wants to spend more time on hobbies like crossword puzzles, cooking, and spending time with family.

Expectations:

- Technological Adaptation: Prefers a user-friendly, intuitive solution and online options.

FEATURES & HOW THEY TACKLE MAJOR CHALLENGES

User motivation because of defined goal

Engagement because of gamification

Retention because of tailored plans

Personalised Wellness quest (Gamification)

Goal setting, Tailored plan to achieve goal (stress levels, activity level, etc), Avatar with badges, Leadership board

Engagement because of community feeling

Awareness through social media

Social Connect

Team based challenges, group fitness activities, coworker appreciation, counselling connects, and social media integration

Well being Insights

View on progress on goals & dashboard to see upcoming activities, wearable integration, AI powered insights

Retention because of wearables and AI insights

Measurable impact of wellbeing

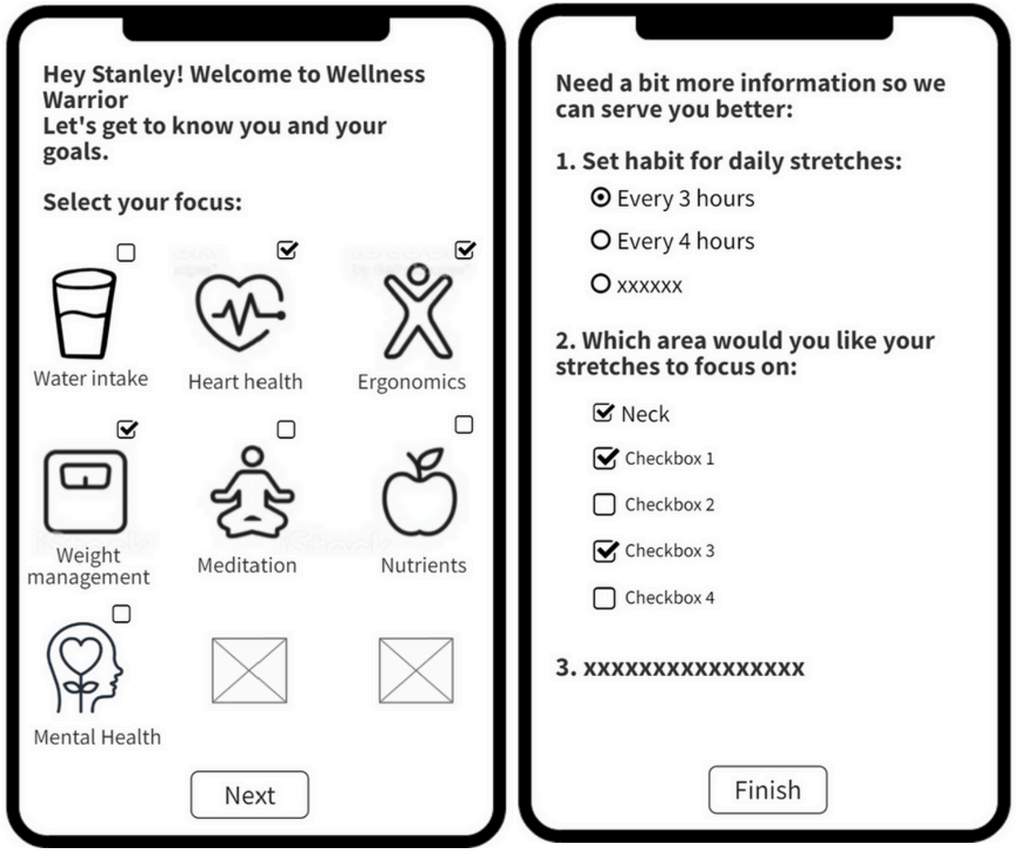

Impact dashboard for employer

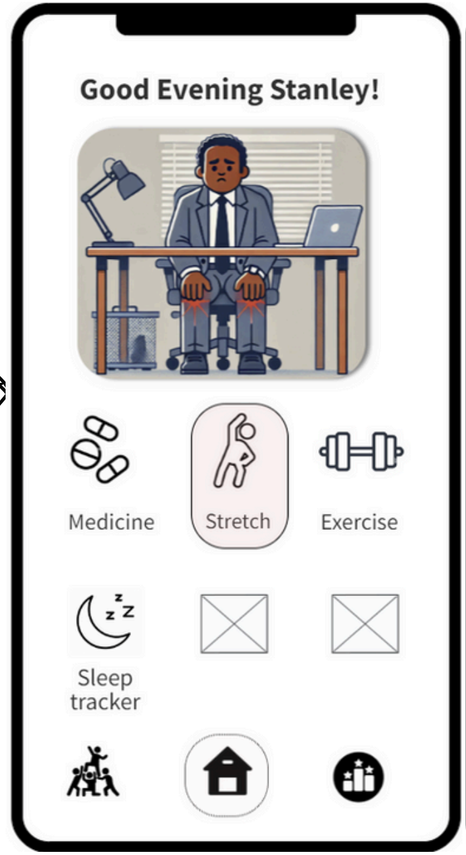

Track employee awareness, user motivation, engagement, retention, effectiveness and ROI.
Integration with current company setup

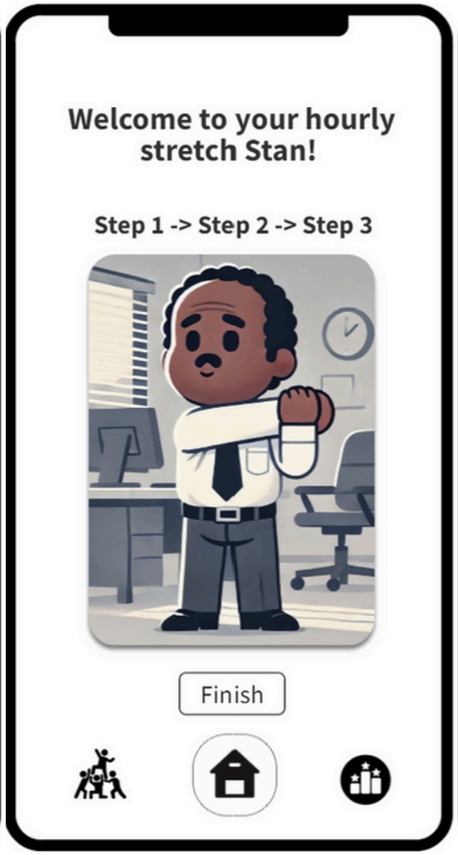

HR can plan awareness campaigns based on impact tracking

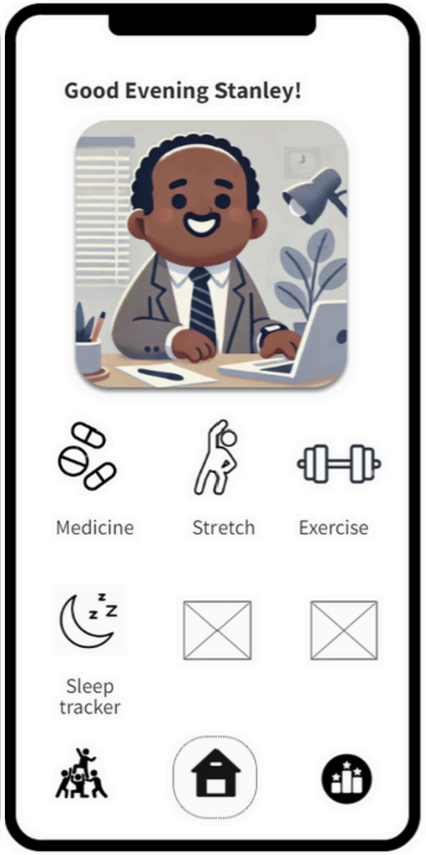

Measurable effectiveness

#1: PERSONALISED WELLNESS QUEST

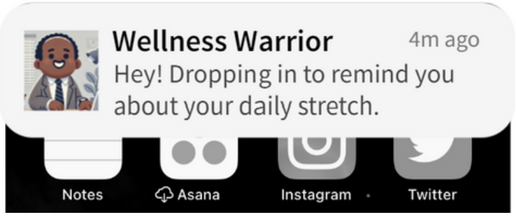

STEP 1: CREATE YOUR AVATAR AND SET GOALS

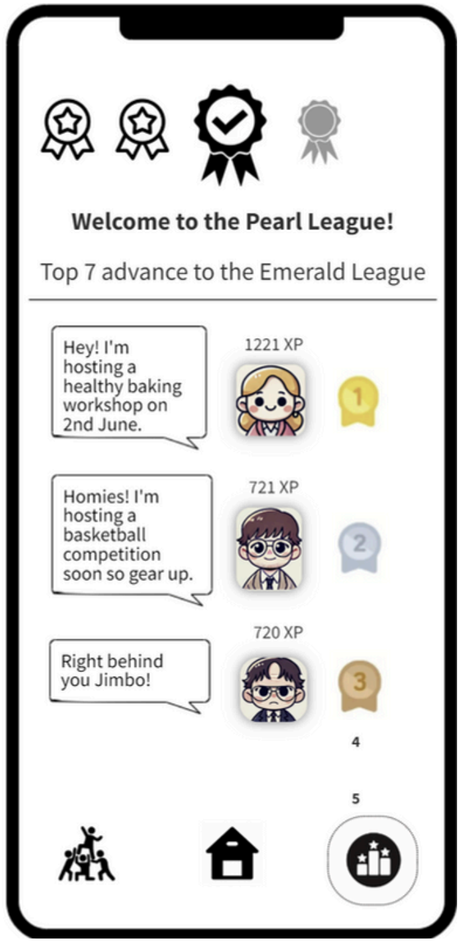

User can easily create an avatar by uploading a photo and edit it anytime you need. The goal-setting process involves a quick quiz that gathers specific details to provide personalized recommendations.

STEP 2: TRACK YOUR GOALS AND COMPLETE STREAKS TO GAIN XP

Users can set reminders and track their habits. Any pending actions are highlighted, and clicking on these highlights displays the actions required based on the goals previously set.

#2 SOCIAL CONNECT & WELL-BEING INSIGHTS

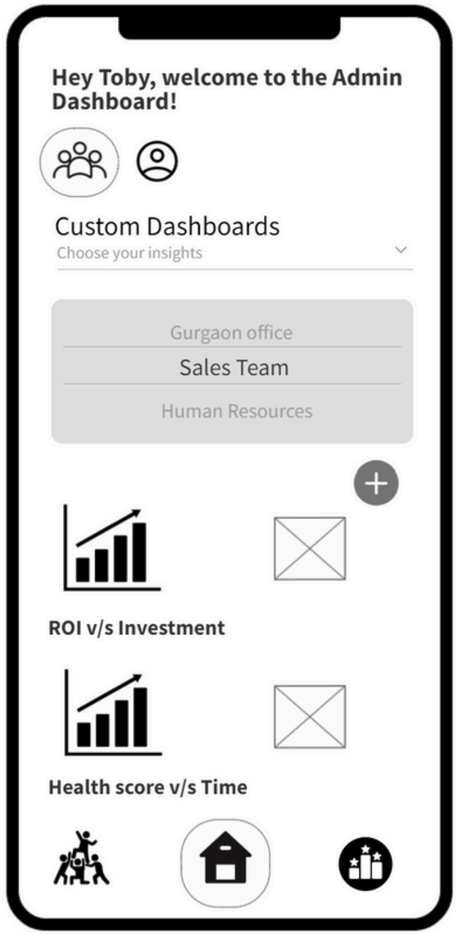

Step 3: Track your progress on the Leaderboard, where users advance through different leagues based on the XP earned. Additionally, they can set messages to interact and share updates on new initiatives & share progress on social media

Step 4: Organize and join events directly through the app. Users can post event ideas, which others can vote on and suggest times for. By selecting an event, users can collaboratively plan it within the app.

Admin dashboard

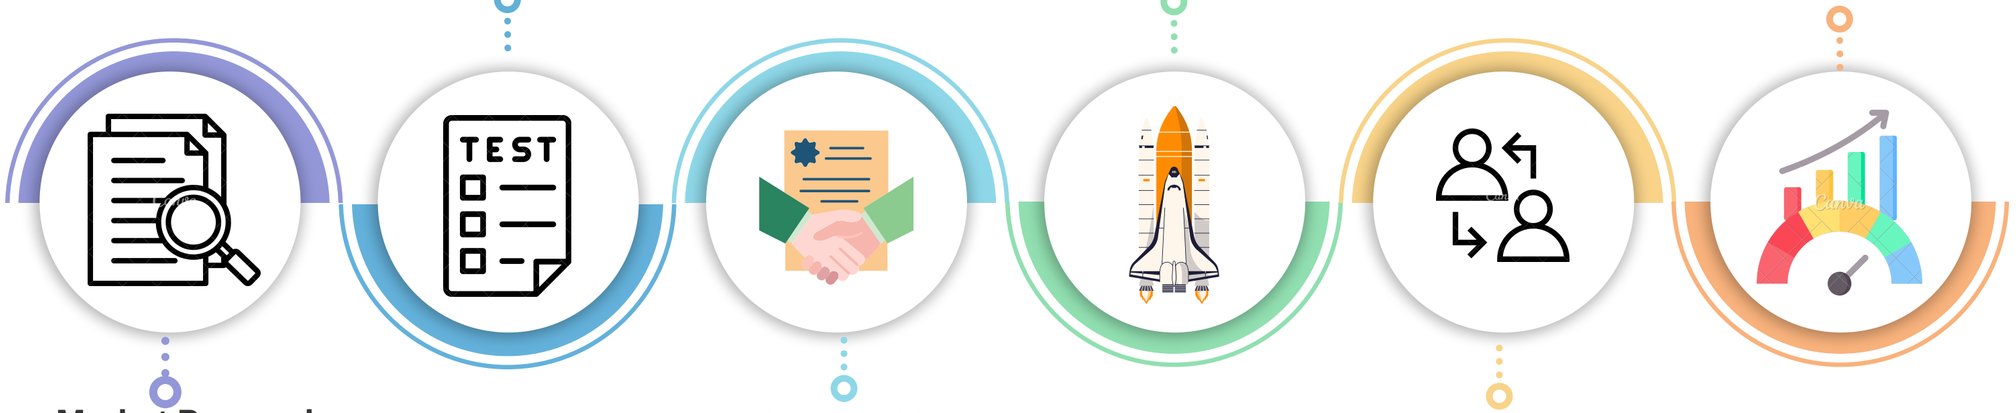

Admins can create community charts, manage metrics, analyze community data, and assess individual data to determine ROI on initiatives, all while strongly safeguarding user privacy and protecting personal information.

GTM

Beta Testing and Feedback
Pilot Program, Feedback Collection and Analysis

Launch strategy
Phased launch with targeted marketing events. Media engagement and strategic influencer partnerships.

Improvements
Continual app updates and improvements. Optimize through analytics and feedback

Market Research
Industry Analysis, Target Customer Segmentation, Regulatory and Legal Considerations

Partnerships
Strategic Alliances- Partnering with large scale firms like TCS and Infosys, Partner with HR and corporate wellness coaches, Bundle with existing HR tools like HR-mart, excelity etc

Engagement
Engage clients with content & community, Develop support and success teams.

TIMELINE

Month 1-2

PLANNING
Conduct market research and competitive analysis,Define project scope and identify key features, Set project goals and objectives, Gather requirements from stakeholders, Develop a detailed project plan, timeline, and milestones.

3-4

DESIGN
Conceptualize app design and create wireframes, Review and finalize design, Design user interface (UI) and user experience (UX), Prepare design prototypes, Conduct design review and approval.

5-9

DEVELOPMENT
Set up development environment and begin backend development, Start frontend development and integrate core features, Develop AI-powered insights module, Integrate gamification and wellness connect features, Conduct ongoing testing and debugging.

10

TESTING
Conduct unit testing of individual components, Perform integration testing for combined modules, Execute user acceptance testing (UAT) with selected users, Identify and fix bugs and issues, Validate performance and security aspects.

11-12

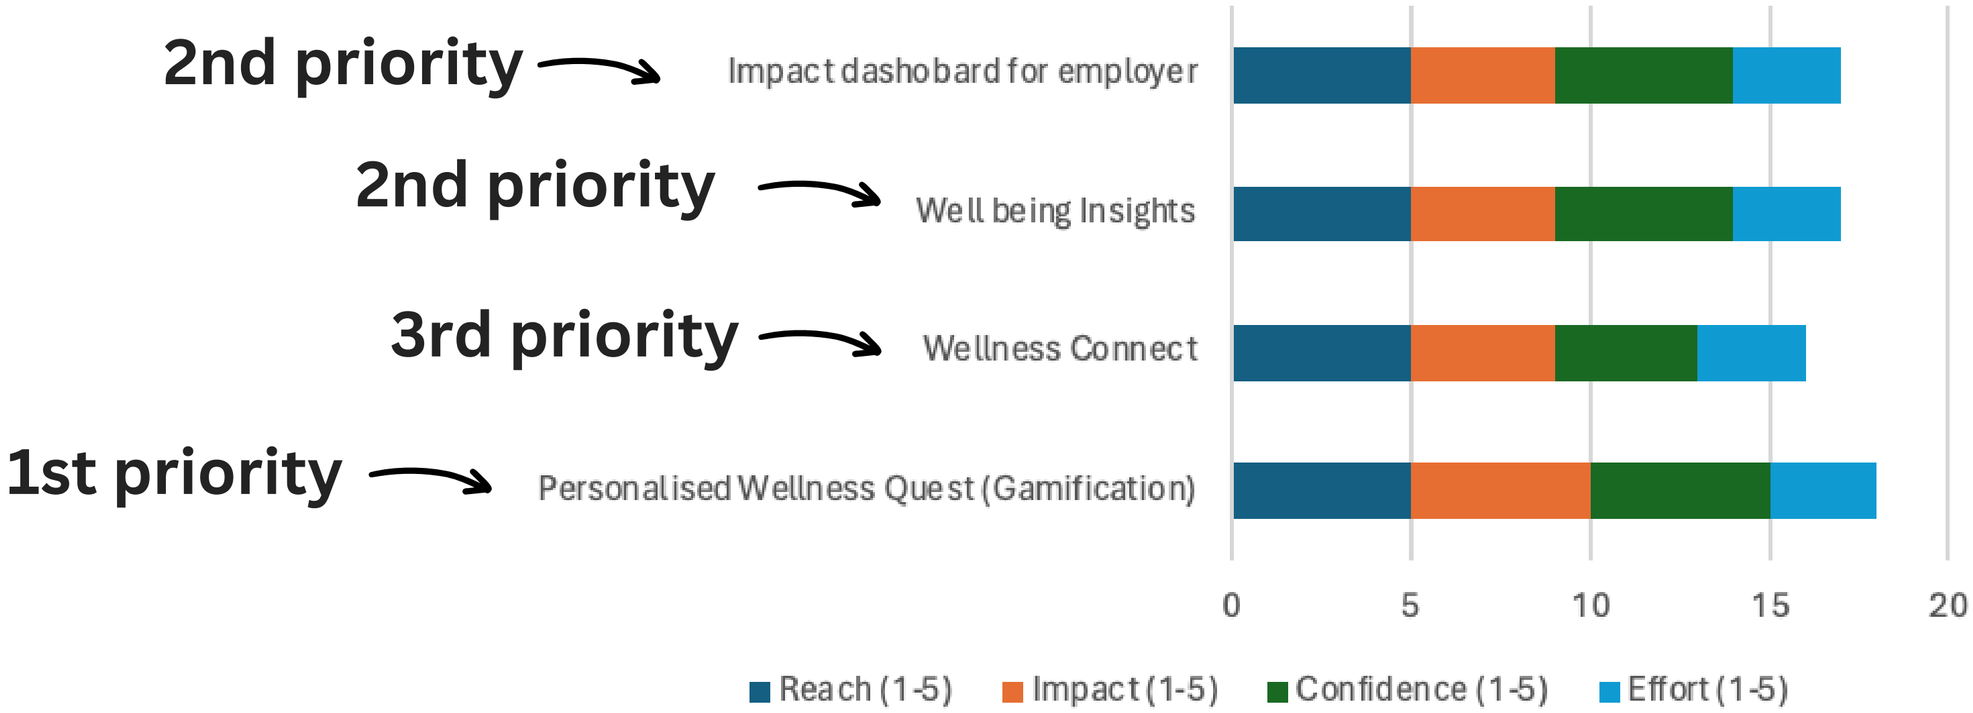

PRE LAUNCH
Conduct beta testing with a broader audience, Gather feedback and make necessary adjustments, Finalize app content and settings, Prepare marketing and launch materials, Conduct final quality assurance (QA) testing.

13+

LAUNCH & POST LAUNCH
Officially launch the wellness app, Monitor app performance and user feedback, Provide user support and issue resolution, Implement updates and improvements based on feedback, Plan and execute ongoing marketing and engagement strategies.

FEATURE PRIORITISATION

Using the RICE framework to prioritise the features, we get the following results:

KEY METRICS

North Star Metrics - Employee Engagement Rate = (Number of Active users / Total Number of users) x 100

App Level

OVERALL

- DAU & MAU
- New B2B sign-ups
- Company Retention Rate
- Net Promoter Score (NPS)
- Revenue Growth Rate

Feature Level

Gamification

- Employee Wellness Improvement
- Feature Adoption Rate
- Employee Health Score
- Employee Efficiency

Social Connect

- Employee Wellness Improvement
- Employee Satisfaction Score
- % increase in Social Competitions

Insights & Dasboards

- Average time spent
- % increase ROI/Investment
- % increase in health scores (sleep, nutrition, ergonomics, etc.)

Thank you!

APPENDIX

RICE CALCULATION

Feature	Reach (1-5)	Impact (1-5)	Confidence (1-5)	Effort (1-5)	RICE Score
Personalised Wellness Quest (Gamification)	5	5	5	3	42
Wellness Connect	5	4	4	3	27
Well being Insights	5	4	5	3	33
Impact dashobard for employer	5	4	5	3	33

Steps used to Estimate TAM:
Determine the number of organizations in India that are potential customers.
According to a Statista report, India had about 1.63 million registered companies as of 2020.
Estimate the average number of employees per organization.
Assuming an average of 100 employees per organization.
Calculate the potential number of users.
1.63 million organizations * 100 employees/organization = 163 million potential users.
Estimate the annual spending on wellness applications per employee.
Assuming an average of $50 per employee annually.
TAM Calculation: TAM=163 million employees×$50/employee/year=$8.15 billion/year

Steps used to Estimate SAM:
Focus on the organizations actively investing in employee wellness.
Assume 50% of the companies are actively investing in employee wellness programs.
Calculate the number of employees in these companies.
50% of 163 million = 81.5 million employees.
Estimate the annual spending on wellness applications per employee.
Using the same annual spending of $50 per employee.
SAM Calculation: SAM=81.5 million employees×$50/employee/year=$4.075 billion/year

Steps used to Estimate SOM:
Consider SigmaCorp's market penetration rate.
Assume SigmaCorp can capture 5% of the SAM in the first few years.
SOM Calculation: SOM=5%×$4.075 billion/year=$203.75 million/year
